## 350-701 Latest Exam - Reliable 350-701 Guide Files

Whether you prefer web-based practice exam, desktop-based exam, or PDF real questions, we've got you covered. We believe that variety is key when it comes to Cisco 350-701 Exam Preparation, and that's why we offer three formats that cater to different learning styles and preferences.

Cisco 350-701 Implementing and Operating Cisco Security Core Technologies exam is a certification exam designed for IT

professionals who specialize in security. 350-701 exam is one of the core requirements for obtaining the Cisco Certified Network Professional (CCNP) Security certification. Implementing and Operating Cisco Security Core Technologies certification validates the candidate's knowledge and skills in implementing and operating core security technologies, including network security, cloud security, content security, endpoint protection and detection, secure network access, visibility and enforcement, and automation.

## Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q338-Q343):

### NEW QUESTION # 338

When configuring ISAKMP for IKEv1 Phase1 on a Cisco IOS router, an administrator needs to input the command `crypto isakmp key cisco address 0.0.0.0`. The administrator is not sure what the IP addressing in this command issued for. What would be the effect of changing the IP address from 0.0.0.0 to 1.2.3.4?

- A. The key server that is managing the keys for the connection will be at 1.2.3.4
- **B. The remote connection will only be allowed from 1.2.3.4**
- C. The address that will be used as the crypto validation authority
- D. All IP addresses other than 1.2.3.4 will be allowed

**Answer: B**

Explanation:

The command `crypto isakmp key cisco address 1.2.3.4` authenticates the IP address of the 1.2.3.4 peer by using the key cisco. The address of "0.0.0.0" will authenticate any address with this key

### NEW QUESTION # 339

Which feature is configured for managed devices in the device platform settings of the Firepower Management Center?

- A. network address translations
- B. quality of service
- **C. time synchronization**
- D. intrusion policy

**Answer: C**

Explanation:

Time synchronization is one of the features that can be configured for managed devices in the device platform settings of the Firepower Management Center (FMC). Time synchronization ensures that the FMC and its managed devices have the same date and time settings, which is important for accurate event logging and reporting. The FMC can act as a Network Time Protocol (NTP) server for its managed devices, or it can use an external NTP server as a time source<sup>1</sup>. The FMC can also synchronize its time with the system clock of the device where it is installed<sup>2</sup>. References := 1: Firepower Management Center Device Configuration Guide, 7.1

- Platform Settings 2: Firepower Management Center Configuration Guide, Version 6.6 - Device Management Basics

### NEW QUESTION # 340

Which DevSecOps implementation process gives a weekly or daily update instead of monthly or quarterly in the applications?

- A. Orchestration
- **B. CI/CD pipeline**
- C. Security
- D. Container

**Answer: B**

Explanation:

Unlike the traditional software life cycle, the CI/CD implementation process gives a weekly or daily update instead of monthly or quarterly. The fun part is customers won't even realize the update is in their applications, as they happen on the fly.
