## Salient Features of Desktop Splunk SPLK-4001 Practice Tests Software

TrainingDump is an excellent source of information on IT Certifications. In the TrainingDump, you can find study skills and learning materials for your exam. TrainingDump's Splunk SPLK-4001 training materials are studied by the experienced IT experts. It has a strong accuracy and logic. To encounter TrainingDump, you will encounter the best training materials. You can rest assured that using our Splunk SPLK-4001 Exam Training materials. With it, you have done fully prepared to meet this exam.

## Splunk O11y Cloud Certified Metrics User Sample Questions (Q55-Q60):

### NEW QUESTION # 55

To refine a search for a metric a customer types host: test-\*. What does this filter return?

- A. Only metrics with a value of test- beginning with host.
- B. Error
- C. Only metrics with a dimension of host and a value beginning with test-.
- D. Every metric except those with a dimension of host and a value equal to test.

**Answer: C**

Explanation:  
Explanation

The correct answer is A. Only metrics with a dimension of host and a value beginning with test-.

This filter returns the metrics that have a host dimension that matches the pattern test-. For example, test-01, test-abc, test-xyz, etc.

The asterisk (\*) is a wildcard character that can match any string of characters<sup>1</sup> To learn more about how to filter metrics in Splunk Observability Cloud, you can refer to this documentation<sup>2</sup>.

1: <https://docs.splunk.com/Observability/gdi/metrics/search.html#Filter-metrics> 2:

<https://docs.splunk.com/Observability/gdi/metrics/search.html>

### NEW QUESTION # 56

What is the limit on the number of properties that an MTS can have?

- A. 0
- B. 1
- C. No limit
- D. 2

**Answer: A**

Explanation:

The correct answer is A. 64.

According to the web search results, the limit on the number of properties that an MTS can have is 64. A property is a key-value pair that you can assign to a dimension of an existing MTS to add more context to the metrics. For example, you can add the property use: QA to the host dimension of your metrics to indicate that the host is used for QA<sup>1</sup> Properties are different from dimensions, which are key-value pairs that are sent along with the metrics at the time of ingest. Dimensions, along with the metric name, uniquely identify an MTS. The limit on the number of dimensions per MTS is 362 To learn more about how to use properties and dimensions in Splunk Observability Cloud, you can refer to this documentation<sup>2</sup>.

1: <https://docs.splunk.com/Observability/metrics-and-metadata/metrics-dimensions-mts.html#Custom-properties> 2:

<https://docs.splunk.com/Observability/metrics-and-metadata/metrics-dimensions-mts.html>

### NEW QUESTION # 57

A customer wants to share a collection of charts with their entire SRE organization. What feature of Splunk Observability Cloud makes this possible?

- A. Chart exporter
- B. Public dashboards
- C. Shared charts
- D. Dashboard groups

**Answer: D**

Explanation:

Explanation

According to the web search results, dashboard groups are a feature of Splunk Observability Cloud that allows you to organize and share dashboards with other users in your organization<sup>1</sup>. You can create dashboard groups based on different criteria, such as service, team, role, or topic. You can also set permissions for each dashboard group, such as who can view, edit, or manage the dashboards in the group. Dashboard groups make it possible to share a collection of charts with your entire SRE organization, or any other group of users that you want to collaborate with.

### NEW QUESTION # 58

Which of the following can be configured when subscribing to a built-in detector?

- A. Links to a chart.
- B. Alerts on team landing page.
- C. Alerts on a dashboard.
- D. Outbound notifications.

**Answer: D**

Explanation:

#### Explanation

According to the web search results<sup>1</sup>, subscribing to a built-in detector is a way to receive alerts and notifications from Splunk Observability Cloud when certain criteria are met. A built-in detector is a detector that is automatically created and configured by Splunk Observability Cloud based on the data from your integrations, such as AWS, Kubernetes, or OpenTelemetry<sup>1</sup>. To subscribe to a built-in detector, you need to do the following steps:

Find the built-in detector that you want to subscribe to. You can use the metric finder or the dashboard groups to locate the built-in detectors that are relevant to your data sources<sup>1</sup>.

Hover over the built-in detector and click the Subscribe button. This will open a dialog box where you can configure your subscription settings<sup>1</sup>.

Choose an outbound notification channel from the drop-down menu. This is where you can specify how you want to receive the alert notifications from the built-in detector. You can choose from various channels, such as email, Slack, PagerDuty, webhook, and so on<sup>2</sup>. You can also create a new notification channel by clicking the + icon<sup>2</sup>.

Enter the notification details for the selected channel. This may include your email address, Slack channel name, PagerDuty service key, webhook URL, and so on<sup>2</sup>. You can also customize the notification message with variables and markdown formatting<sup>2</sup>.

Click Save. This will subscribe you to the built-in detector and send you alert notifications through the chosen channel when the detector triggers or clears an alert.

Therefore, option C is correct.

#### NEW QUESTION # 59

Which analytic function can be used to discover peak page visits for a site over the last day?

- A. Count: (Id)
- **B. Maximum: Transformation (24h)**
- C. Lag: (24h)
- D. Maximum: Aggregation (Id)

**Answer: B**

#### Explanation:

##### Explanation

According to the Splunk Observability Cloud documentation<sup>1</sup>, the maximum function is an analytic function that returns the highest value of a metric or a dimension over a specified time interval. The maximum function can be used as a transformation or an aggregation. A transformation applies the function to each metric time series (MTS) individually, while an aggregation applies the function to all MTS and returns a single value. For example, to discover the peak page visits for a site over the last day, you can use the following SignalFlow code:

```
maximum(24h, counters("page.visits"))
```

This will return the highest value of the page.visits counter metric for each MTS over the last 24 hours. You can then use a chart to visualize the results and identify the peak page visits for each MTS.

#### NEW QUESTION # 60

.....

Nobody wants to be stranded in the same position in his or her company. And nobody wants to be a normal person forever. Maybe you want to get the SPLK-4001 certification, but daily work and long-time traffic make you busier to improve yourself. However, there is a piece of good news for you.
