220-1101 Quiz Braindumps: CompTIA A+ Certification Exam: Core 1 - 220-1101 Quiz Torrent & 220-1101 Exam Review

PracticeMaterial is a trusted platform that is committed to helping CompTIA 220-1101 exam candidates in exam preparation. The CompTIA 220-1101 exam questions are real and updated and will repeat in the upcoming CompTIA 220-1101 Exam. By practicing again and again you will become an expert to solve all the 220-1101 exam questions completely and before the exam time.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q680-Q685):

NEW QUESTION # 680
Which of the following is the best way to protect the data of a virtual machine in the event of hardware failure?

- A. RAID
- B. Redundant hardware

- C. Cloud-based backup
- D. UPS

Answer: C

Explanation:
Cloud-based backup involves regularly backing up virtual machine data to offsite cloud storage.
In the event of hardware failure, data can be restored from the cloud backup. This approach provides data protection and also offers the advantage of geographic redundancy, as data is stored offsite.

NEW QUESTION # 681
A technician responds to a user who has reported that a laptop is too hot. The technician notices the laptop is not able to sit level on the workspace. What of the following BEST describes the issue with the laptop?

- A. The CPU fan is too powerful.
- B. The hard drive is disconnected.
- C. The docking station is improperly installed.
- D. The battery is damaged.

Answer: D

Explanation:
Explanation
A damaged battery can cause a laptop to overheat and swell, making it unable to sit level on the workspace. A swollen battery can also pose a fire hazard and damage other components of the laptop, such as the motherboard or keyboard. The technician should replace the battery as soon as possible and dispose of it properly according to local regulations. NEW QUESTION # 682
A technician verifies the slow boot time and slow OS performance of a tower server with a RAID 5 on a PCIe RAID card that does not support hot swapping. Which of the following steps should the technician take NEXT to verify RAID health?

- A. Replace the failed drive while users are connected
- B. Verify S.M.A.R.T. operation on the RAID card.
- C. Shut down the server and check the RAID controller's status.
- D. Physically clean the HDDs and connectors.

Answer: C

Explanation:
Since the RAID card does not support hot swapping, the technician needs to shut down the server and check the RAID controller's status to verify RAID health. S.M.A.R.T. is a feature of hard drives, not RAID cards. Replacing the failed drive while users are connected could cause data loss or corruption. Physically cleaning the HDDs and connectors is unlikely to solve the slow boot time and performance issues.
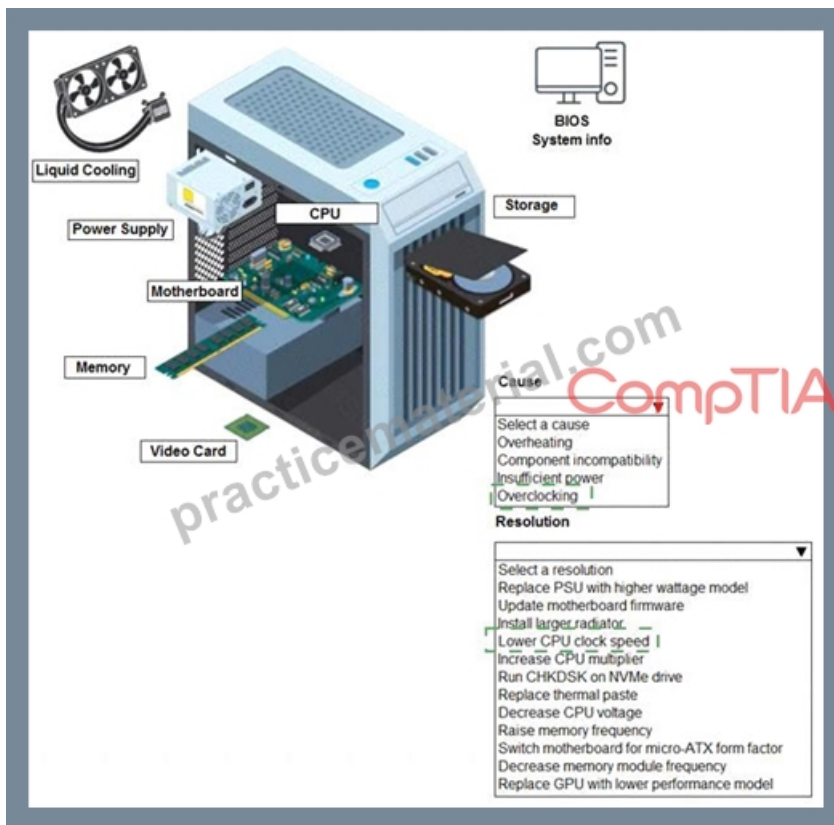

NEW QUESTION # 683
A customer built a computer for gaming, sourcing individual components and then assembling the system. The OS starts up, but within a few minutes the machine locks up. The customer brought the computer to a technician to diagnose the issue.

Liquid Cooling

Power Supply

CPU

Motherboard

Memory

Video Card

BIOS
System info

Storage

Cause

Select a cause ▼
Overheating
Component incompatibility
Insufficient power
Overclocking

Resolution

Select a resolution ▼
Replace PSU with higher wattage model
Update motherboard firmware
Install larger radiator
Lower CPU clock speed
Increase CPU multiplier
Run CHKDSK on NVMe drive
Replace thermal paste
Decrease CPU voltage
Raise memory frequency
Switch motherboard for micro-ATX form factor
Decrease memory module frequency
Replace GPU with lower performance model

Answer:

Explanation:

Explanation

correct answer is "Overclocking" and "Reduce CPU Clock speed" CPU is at 4.5 Ghz when normal is 3.2 Ghz. Overclocking too much can cause freezes, and this is a gaming computer so the user probably took it too far. http://blog.logicalincrements.com/2018/12/4-troubleshooting-tips-overclocking-pc/

NEW QUESTION # 684

A user contacts the help desk in reference to a failing thumbprint scanner. The user states the scanner was functioning correctly yesterday. Which of the following troubleshooting steps should be performed FIRST after the ticket has been filed?

- A. Requisition a new scanner.
- B. Attempt to clean the scanner.
- C. File a damage report.
- D. Inquire about possible changes.

Answer: D

Explanation:
Explanation

1. Identify the problem.
Gather information from the user, identify user changes, and, if applicable, perform backups before making changes.
Inquire regarding environmental or infrastructure changes.
2. Establish a theory of probable cause (question the obvious).
If necessary, conduct external or internal research based on symptoms.
3. Test the theory to determine the cause.
Once the theory is confirmed, determine the next steps to resolve the problem.
If the theory is not confirmed, re-establish a new theory or escalate.
4. Establish a plan of action to resolve the problem and implement the solution.
Refer to the vendor's instructions for guidance.
5. Verify full system functionality and, if applicable, implement preventive measures.
6. Document the findings, actions, and outcomes.
