### NEW QUESTION # 34

What is a capability of the Cisco IP Phone Services API?

- A. It uses SOAP for all communication between clients and phones.
- B. It bulk updates multiple phones with new firmware.
- C. It uses the XML schema file to define the behavior of the service.
- D. It creates a DNS record in the server hosting for the IP Phone Services.

**Answer: C**

### Explanation:

The Cisco IP Phone Services API enables developers to create custom services for Cisco IP phones. These services use XML to define how content is displayed and interacted with on the phone. The behavior of each service is structured based on Cisco's XML object schema, which defines how elements like menus, input fields, and text should behave and render on the phone display.

NEW QUESTION # 36

Refer to the exhibit. Which code snippet must be added to the blank in the script to create a new Cisco Webex space?

```
import requests
import json

url = 'https://api.ciscospark.com/v1/rooms'
access_token = 'TQxMjNjMWQyOTc4ZDUONzJmOTEtNjIx_PF84_leb65fdf-9643-417f-9974-ad72caede10f'
refresh_token = 'PF84_leb65fdf-9643-417f-9974-ad72caede10f_TQxMjNjMWQyOTc4ZDUONzJmOTEtNjIx'

room_title = 'My new Teams room'
```

```
response = requests.post(
    url,
    headers={'Authorization': 'Bearer ' + access_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• A.

```
response = requests.post(
    url,
    headers={'Authorization': 'Bearer ' + refresh_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• B.

```
response = requests.post(
    url,
    headers={'Authorization': 'Bearer ',
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• C.

```
response = requests.put(
    url,
    headers={'Authorization': 'Bearer ' + access_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• D.

**Answer: A**

Explanation:

To create a new Webex space (room) using the Webex REST API, you must send a POST request to the /v1/rooms endpoint using a valid access token for authorization.

The correct code snippet is:

```

response = requests.post(
    url,
    headers={'Authorization': 'Bearer ' + access_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)

```

This uses the correct HTTP method (POST), authenticates with the correct token (access\_token), and formats the JSON body properly with the required titlefield.
