NPPEの認定を取得するのが簡単ではないことが心配な場合。NPPE試験の質問は、お客様のニーズを満たすことができます。一度NPPE試験資料を使用すれば、時間の浪費を心配する必要はありません。高い効率が私たちの大きな利点です。NPPE学習教材の練習と統合に20〜30時間を費やすだけで、良い結果が得られます。長年の開発プラクティスの後、NPPEテストトレンドは絶対に最高です。NPPE試験の資料を選択すると、より良い未来を受け入れることができます。

APEGS NPPE 認定試験の出題範囲：

トピック	出題範囲
トピック 1	Regulation of Members & Discipline Processes: This domain examines member regulation through discipline procedures, complaint processes, practice reviews for individuals and firms, and continuing professional development requirements.
トピック 2	Ethics: This domain examines ethical theories and their application to professional dilemmas. It covers Canadian codes of ethics and common ethical challenges like conflicts of interest, whistleblowing, and balancing competing obligations.
トピック 3	Professional Law: This domain focuses on legislation governing the professions, including acts and regulations establishing self-regulation and licensure. It covers admission requirements, mobility agreements, and enforcement against illegal practice.
トピック 4	Professionalism: This domain defines professional engineers and geoscientists through their advanced knowledge, self-regulation, and ethical obligations. It covers regulatory authority, scope of practice in Canada, and the professions' value to society.

APEGGS National Professional Practice Examination (NPPE) Exam 認定 NPPE 試験問題 (Q17-Q22):

質問 # 17

Technical societies provide well-organized Information for professionals with similar Interests. Which of the following statements related to technical societies is false?

- A. Many technical societies have their own code of ethics for members.
- B. Many technical societies promote their specific disciplines in society.
- C. AM technical societies are regulated by provincial/territorial professional regulators.
- D. Some technical societies have copyright over specific published titles.

正解: C

解説:

The statement that all technical societies are regulated by provincial/territorial professional regulators (Option D) is false. While professional regulators oversee licensed professionals and ensure the enforcement of ethical standards, technical societies often operate independently. They focus on the promotion of specific disciplines, sharing knowledge, and may have their own codes of ethics, but they are not typically regulated by professional regulatory bodies, which specifically oversee individual professionals and their practice standards.

質問 # 18

Tort concept of fault has extended the scope of products liability by the:

- A. extension of the notion of fraud.
- B. application of explicit warranties.
- C. availability of liability Insurance.
- D. application of the notion of reasonable care.

正解: D

解説:

The tort concept of fault has extended the scope of products liability through the application of the notion of reasonable care. This principle implies that manufacturers and distributors must ensure that their products meet a standard of safety that a reasonably prudent manufacturer would use under similar circumstances. The concept of reasonable care broadens the liability exposure of these parties by establishing an expectation of proactive efforts to prevent harm that their products might otherwise cause.

質問 # 19

In which of the following situations Is It necessary that a professional be Informed that his or her work Is being reviewed?

- A. When a lawyer requests the review under solicitor-client privilege
- B. When proprietary matters such as trade secrets are involved
- C. When public safety is involved
- D. When an association conducts a practice review to ensure continuing competency

正解: D

解説:

The correct answer is D. It is necessary for a professional to be informed that his or her work is being reviewed when an association conducts a practice review to ensure continuing competency. This notification is part of maintaining transparency in the review process and upholding the professional's right to be informed about assessments of their work. Practice reviews are typically mandated by professional associations to ensure that all members meet the required standards of professional practice, and informing the members about these reviews is a standard procedure.

質問 # 20

A Canadian patent gives the inventor a right to exclude others from using the invention in:

- A. any country that is part of the NAFTA agreement.
- **B. any part of Canada.**
- C. all of North America.
- D. any country that has an exchange agreement with Canada.

正解: B

解説:

Patent rights are territorial. A Canadian patent provides the patent holder with the right, in Canada, to exclude others from making, using, selling, or importing the patented invention (subject to the Patent Act and court interpretation). It does not automatically extend to the United States, Mexico, or any other country, regardless of trade agreements (A, B) or information-sharing arrangements (C). To obtain protection elsewhere, an inventor must seek patent rights in those jurisdictions (directly or via international filing mechanisms), and enforceability remains country-specific. NPPE intellectual property summaries typically highlight that patents are time-limited monopolies granted by the state, enforceable only within the granting state's territory. Therefore, the correct scope for a Canadian patent is any part of Canada (D).

質問 # 21

To become a licensed professional and legally practice engineering or geoscience in Canada, an applicant must in all cases

- **A. demonstrate knowledge in professional practice, law, and ethics**
- B. obtain a post-graduate degree in engineering or geoscience
- C. pass a fundamentals of engineering or geoscience national exam
- D. possess six years of applied work experience in their field of discipline

正解: A

解説:

Licensure in Canada is administered by provincial/territorial regulators, and while specific pathways vary, all jurisdictions require applicants to demonstrate competence in professional practice, ethics, and applicable law—typically through the NPPE (or an equivalent professional practice/ethics exam where used). A postgraduate degree (A) is not universally required; accredited undergraduate degrees or acceptable equivalents are the norm. A "fundamentals" national exam (C) is not universally required across Canadian jurisdictions for engineering/geoscience licensure; where technical exams exist, they are applied in specific assessment pathways rather than as a universal national FE/FG requirement. Work experience duration (D) also varies by jurisdiction and pathway and is not uniformly "six years" in all cases. What is consistently required is proof of professional practice knowledge: ethics, legal concepts, professional responsibilities, and standards of conduct. Therefore, B is the only statement that applies in all cases.
