**RCA EXAM PREP (RELATIVITY CERTIFIED
ADMINISTRATOR EXAM PREP) WITH
CORRECT ACTUAL QUESTIONS AND
CORRECTLY WELL DEFINED ANSWERS
LATEST 2024 – 2025 ALREADY GRADED A+**

What does a green check mark next to a field in the layout indicate? - ANSWERS-
That the field is currently copying coding from the previous document.

What fields are available in the Add Text to Layout Form? - ANSWERS-Category
Row, Column, Order, Custom Text

How can you make items on a layout collapsible? - ANSWERS-Go to the Category
Information and choose options for (1) Collapsible and (2) Collapsed By Default.

What does a question mark icon in a layout indicate? - ANSWERS-That a category
contains contextual help information.

Which options can be changed from within the 'My Settings' window:

For some candidates, a good after-sale service is very important to them, since they may have some questions about the RCA exam materials. We have the both live chat service stuff and offline chat service, if any question that may bother you, you can ask for a help for our service stuff. They have the professional knowledge about the RCA Exam Materials, and they will give you the most professional suggestions.

There are some loopholes or systemic problems in the use of a product, which is why a lot of online products are maintained for a very late period. The RCA study materials are not exceptional also, in order to let the users to achieve the best product experience, if there is some learning platform system vulnerabilities or bugs, we will check the operation of the RCA study materials in the first time, let the professional service personnel to help user to solve any problems. The RCA Study Materials have many professionals, and they monitor the use of the user environment and the safety of the learning platform timely, for there are some problems with those still in the incubation period of strict control, thus to maintain the RCA study materials timely, let the user comfortable working in a better environment. Believe it or not, we face the more intense society, and we should prompt our competitiveness to make our dreams come true.

RCA Exam Questions Vce & RCA Exam Discount

ExamBoosts is engaged in studying valid exam simulation files with high passing rate many years. If you want to find valid Relativity RCA exam simulations, our products are helpful for you. Our Relativity RCA Exam Simulations will assist you clear exams and apply for international companies or better jobs with better benefits in the near future.

Relativity Certified Administrator Sample Questions (Q14-Q19):

NEW QUESTION # 14

What happens during the staging step of a production?

- A. Relativity takes a snapshot of the data sources and checks for duplicate documents between data sources.
- B. Relativity assigns Bates numbers to documents.
- C. Relativity displays a sample image showing how the branding is applied to documents in the production.
- D. Relativity performs a conflict check to ensure the data sources do not contain documents that are also in the saved search selected in the Production Restriction field.

Answer: A

Explanation:

The correct answer is B. Relativity's official production console documentation explains that Stage Production and Stage and Run Production both take a snapshot of the data sources for the production.

The staging step captures the current contents of those data sources so the production job runs against a fixed set of documents. Relativity also documents that staging errors occur if the same document is found in multiple data sources, which means duplicate-document checking is part of what administrators must evaluate during the staging phase.

The other options describe different production activities. Showing a sample image of branding is associated with Preview Production, not staging. Bates numbers are assigned later as part of the production run, not during the initial staging snapshot. The option about conflict checking against a Production Restriction saved search is not the best description of the staging step itself according to the official documentation. For RCA exam purposes, the key concept is that staging freezes the production inputs and surfaces structural issues, especially duplicate documents across data sources, before the full production run proceeds. This is an important quality-control checkpoint because it helps administrators verify that the right documents and data-source configuration are in place before branding, numbering, and export occur. Therefore, the best answer is that during staging, Relativity takes a snapshot of the data sources and checks for duplicate documents between data sources.

NEW QUESTION # 15

When should you run OCR on a production?

- A. After a production is exported.
- B. Before a production is exported.
- C. After a document is redacted.
- D. Before a production is run.

Answer: A

Explanation:

The correct answer is A. After a production is exported. Relativity's official documentation on OCR for redacted production documents explains that you create an OCR set and then point the OCR set to the completed Production. The workflow explicitly states that OCR is performed against the completed production, and once the OCR job is complete, the resulting text becomes ready to export. This means the production must already exist before OCR is run against it. In practical terms, OCR is performed after the production has been run/exported as a completed production set, not before the production exists.

The reason for this is that Relativity OCR in this workflow can operate on production images containing burned-in redactions. That allows the exported text to reflect the redacted version rather than unredacted underlying extracted text. Running OCR before the production is run would not achieve this production-specific result, because the final production images would not yet exist. Option D is too broad and incomplete because a document being redacted does not itself define the OCR timing; the documented process is tied to a completed production. Therefore, under the Productions topic, the correct answer is that you run OCR after the production is exported/completed, because that is when the production images are available for OCR processing.

NEW QUESTION # 16

What problem could you identify using the Imaging Warnings tab after imaging a set of documents?

- A. System was not able to image embedded images.
- B. Possible cut-off content on imaged MSG or EML files.
- C. Native contains content that cannot be imaged.
- D. Native was not imaged because it is password protected.

Answer: B

Explanation:

The correct answer is C. Possible cut-off content on imaged MSG or EML files. Relativity's official Imaging Warnings documentation states that the Imaging Warnings object identifies possible cut-off content on imaged MSG or EML files and stores that information. It further explains that users can review these items on the Imaging Warnings tab after imaging completes. The other choices describe imaging failures or limitations, but they are not what the Imaging Warnings tab is specifically designed to identify. Password-protected failures and general non-imageable content are handled through other imaging or processing error mechanisms. The Imaging Warnings feature is much narrower and is specifically meant to flag the risk that content in imaged MSG or EML items may have been cut off in the rendered output. Therefore, the correct answer is C .

NEW QUESTION # 17

You need a user to perform some admin operations, including creating groups, managing users, and assigning permissions. However, you do not want them to review the Processing or Production queues. How should you configure the user's permissions?

- A. Add the user to the System Admin group.
- B. Add the user to the System Admin group and configure the System Admin group to restrict permissions to access Process and Production queues.
- **C. Add them to an instance-level group with permissions to create groups, manage users, and assign permissions.**
- D. Add the user to the Workspace Admin group.

Answer: C

NEW QUESTION # 18

You're provided a list of key terms that include noise words by the supervising attorney. What step should you take before running a Search Terms Report?

- A. Add key terms to the dtSearch index alphabet file.
- **B. Remove key terms from the dtSearch index noise words.**
- C. Replace noise words in the key terms with asterisk *.
- D. Remove noise words from the key terms.

Answer: B

Explanation:

The correct answer is D. Remove key terms from the dtSearch index noise words. Relativity's dtSearch documentation explains that if a word in the search phrase is part of the noise words list, and that word is important to the search, you must remove it from the dtSearch noise words list and then rebuild the index. The documentation gives this exact type of guidance for terms like "and" when the term must be treated as part of the actual phrase instead of being ignored.

This makes options B and C incorrect because changing or deleting the attorney's search terms would alter the intended search logic rather than making the index capable of respecting the requested phrase. Option A is also incorrect because the alphabet file is for searchable characters and tokenization behavior, not for managing ignored noise words. Therefore, before running the Search Terms Report, the correct step is to remove those key terms from the dtSearch index noise words list and rebuild the index if needed.

NEW QUESTION # 19

.....

Now we can say that Relativity Certified Administrator (RCA) exam questions are real and top-notch Relativity RCA exam questions that you can expect in the upcoming Relativity RCA exam. In this way, you can easily pass the Relativity Certified Administrator (RCA) exam with good scores. The countless RCA Exam candidates have passed their dream Relativity RCA certification exam and they all got help from real, valid, and updated RCA practice questions, You can also trust on ExamBoosts and start preparation with confidence.
