- B. Managing cloud storage solutions
- C. Ensuring cloud services are accessible worldwide

**NEW QUESTION # 202**
Refer to the exhibit. An engineer is investigating an unauthorized connection issue using Cisco Secure Cloud Analytics. Which two actions must be taken? (Choose two.)

- A. Reinstall the host from scratch.
- B. Inform the incident management team.
- C. Validate the IDS logs
- D. Block the unwanted IP addresses on the firewall
- E. Reinstall the host from a recent backup.

**Answer: B,D**

Explanation:
The Secure Cloud Analytics alert indicates suspicious heartbeat-based connections from an internal server (ip-10-201-0-16) to multiple suspicious IPs over UDP/port 53 (DNS). This behavior suggests command-and- control (C2) activity or botnet communications.
B: Alerting the incident response (IR) team is a critical next step in escalating a verified threat as per SCAZT Section 6 (Threat Response, Pages 114-117).
D: Blocking the identified malicious IPs on perimeter firewalls or network access control devices is an appropriate containment step to disrupt communication.
Reinstallation (A/E) is premature without a full forensic investigation. Validating IDS logs (C) is useful but not immediate response-focused compared to actions B and D.
