## JN0-452 Exam Collection Pdf & Dump JN0-452 File

JN0-452 study material has a high quality service team. First of all, the authors of study materials are experts in the field. They have been engaged in research on the development of the industry for many years, and have a keen sense of smell for changes in the examination direction. During your installation, JN0-452 exam questions hired dedicated experts to provide you with free remote online guidance. During your studies, JN0-452 Exam Torrent also provides you with free online services for 24 hours, regardless of where and when you are, as long as an email, we will solve all the problems for you. At the same time, if you fail to pass the exam after you have purchased JN0-452 training materials, you just need to submit your transcript to our customer service staff and you will receive a full refund.

## Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q27-Q32):

### NEW QUESTION # 27

You are deploying multiple Mist APs across many sites in your network. You must ensure that you apply consistent WxLAN and WLAN policies across all sites within the same organization.

Which configuration object should be used to accomplish this behavior?

- A. a config template
- B. site labels
- C. an RF template
- D. a device profile

**Answer: A**

Explanation:

According to the Cisco Catalyst 9800 Series Wireless Controller Software Configuration Guide<sup>1</sup>, a config template is a configuration object that can be used to apply consistent WxLAN and WLAN policies across all sites within the same organization. A config template can be applied to a site group, which is a collection of sites that share common attributes.

### NEW QUESTION # 28

You want to review the roaming activity of a specific wireless client. In this scenario, which two Marvis features would you use to accomplish this task? (Choose two.)

- A. Marvis Query Language
- B. Marvis Actions
- C. Marvis Minis
- D. Marvis Virtual Network Assistant

**Answer: A,D**

Explanation:

To review and troubleshoot the roaming activity of a specific client within a Juniper Mist environment, administrators rely on the conversational and analytical power of the Marvis Virtual Network Assistant (D) and its underlying Marvis Query Language (C). While other Marvis components like Actions focus on organization-wide health and Minis focus on synthetic testing, the VNA and MQL are specifically designed for deep-dive investigations into individual client experiences.

The Marvis Virtual Network Assistant (VNA) serves as the primary interface for this task. It allows an administrator to interact with the Mist AI using natural language. By typing a request such as "Troubleshoot client [Client Name]" or "How was the roaming for [Client Name]?", Marvis VNA aggregates all relevant telemetry data—including signal strength (RSSI), AP transitions, and authentication timings—into a simplified, human-readable summary. It provides a visual timeline of where the client moved and whether each roam was successful, slow, or failed.

Behind the scenes, these natural language requests are often converted into or powered by the Marvis Query Language (MQL). MQL is a structured way to query the Mist Graph API. For specific roaming reviews, the ROAMINGOF clause is used to filter the massive Mist data set for events related only to that client's mobility. For example, a query like roaming of "User-1" during last 24 hours will return a detailed data set showing the "From AP" and "To AP" details, the delta in signal strength during the handoff, and any associated latency.

By using these two features together, administrators can distinguish between a "sticky client" (one that refuses to roam despite a better signal being available) and a "coverage hole" (where the signal drops too low before a new AP is detected). This AI-driven approach eliminates the need for manual packet captures or log parsing, significantly reducing the Mean Time to Repair (MTTR) for mobility-related issues.

### NEW QUESTION # 29

In a Mist vBLE array, what is the function of the single AP that is dynamically elected as the "beam transmitter"?

- A. It listens for BLE signals from all other APs to build the RF map.
- B. It handles all Wi-Fi client traffic for the floor.
- C. It sends out directional BLE beams that are used by the mobile device SDK to calculate its position.
- D. It is the only AP that communicates with the Mist cloud.

**Answer: C**

### NEW QUESTION # 30

An organization has two sites: New York and London. They want to apply a consistent set of WLANs, security policies, and RF settings to all APs in the New York site. What is the most efficient way to achieve this in the Mist UI?

- A. Configure each AP in New York individually.
- B. Create a Device Profile for each AP model.
- **C. Use a Template and apply it to the New York site.**
- D. Use Marvis to copy settings between APs.

**Answer: C**

### NEW QUESTION # 31

Which two fields are required when creating a new site? (Choose two.)

- A. RF template
- B. time zone
- **C. site name**
- **D. location**

**Answer: C,D**

### NEW QUESTION # 32

.....

Desktop practice test software, and web-based practice test software. All three ActualPDF JN0-452 practice test questions formats are easy to use and compatible with all devices and operating systems. The ActualPDF JN0-452 desktop practice test software and web-based practice test software both are the JN0-452 Practice Exam. While practicing on Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) practice test software you will experience the real-time Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) JN0-452 exam environment for preparation. This will help you to understand the pattern of final JN0-452 exam questions and answers.
