## Real Help From Desktop Tableau TDA-C01 Practice Test Software

The Tableau Certified Data Analyst PDF practice material contains actual Tableau TDA-C01 Exam Questions compiled by certified experts around the globe to benefit candidates. The criteria and pattern of the Tableau Certified Data Analyst exam often change, and hence it is essential to use the updated exam study material for preparation. TrainingDumps provides free updates after purchase so that you get the latest Tableau Exam Questions for the exam.

## Tableau Certified Data Analyst Sample Questions (Q74-Q79):

### NEW QUESTION # 74

You have a large data source that contains more than 10 million rows. Users can filter the rows by a field named Animal. The following is a sample of the data.

⑤ You want to improve the performance of the views by including only animals of a particular type.

To which filter should you add the Type field on the worksheet?

- A. Table calculation filter
- B. Dimension filler
- **C. Context filter**
- D. Measure filter

**Answer: C**

#### NEW QUESTION # 75

You have a blank dashboard.

You want to add two sheets to the dashboard. The sheets must support the Show/Hide button.

To which two objects can you add the sheets? (Click the two appropriate Options in the Answer Area.)

**Answer:**

Explanation:

Explanation:

To add two sheets to the dashboard that support the Show/Hide button, you can add them to either a horizontal or a vertical container. A container is an object that can hold one or more sheets or other objects and allow you to arrange them in a layout. A Show/Hide button is a feature that lets you hide or show a container and its contents on the dashboard. You can add a Show/Hide button to any container, whether it is tiled or floating, by using the drop-down menu of the container and selecting "Add Show/Hide Button." You can also customize the appearance and behavior of the button.

To add a horizontal or a vertical container to the dashboard, you can drag them from the Objects pane to the dashboard. A horizontal container will arrange the sheets or objects horizontally, while a vertical container will arrange them vertically. You can then drag the sheets you want to add from the Sheets pane to the container. You can resize and reorder the sheets or objects within the container by using the handles and arrows.

The other objects in the Answer Area, such as text, image, web page, blank, navigation, download, and extension, do not support the Show/Hide button. They are either static elements that cannot hold other objects, or dynamic elements that require user interaction or external sources. You can add them to the dashboard as well, but they will not have the same functionality as a container with a Show/Hide button.

#### NEW QUESTION # 76

You have the following dashboard.

When a user selects a city on the map the data on the bar chart must show only the data for the selected city.

The data in the bar chart must change only when the user selects a different city. How should you configure the dashboard action? (Use the dropdowns in the Answers Area to select the correct options.)

**Answer:**

Explanation:

Explanation:

To configure the dashboard action, you should select Filter as the action type, Select as the run action on option, and All Fields as the target filters option. This will ensure that when a user selects a city on the map, the bar chart will show only the data for the selected city based on all fields in common between the two worksheets. The action will run only when the user selects a different city. References: <https://help.tableau.com/current/pro/desktop/en-us/actions.htm>

[https://help.tableau.com/current/pro/desktop/en-us/actions\\_filter.htm](https://help.tableau.com/current/pro/desktop/en-us/actions_filter.htm)

#### NEW QUESTION # 77

You have the following dataset.

Which formula calculates the percent difference in sales relative to the same quarter the previous year as shown in the Calculation field?

- A.  $(\text{SUM}([Sales]) - \text{LOOKUP}(\text{SUM}([Sales]), -4))$
- B.  $(\text{SUM}([Sales]) - \text{LOOKUP}(\text{SUM}([Sales]), -4)) / (\text{LOOKUP}(\text{SUM}([Sales]), -4))$
- C.  $(\text{SUM}([Sales]) / (\text{LOOKUP}(\text{SUM}([Sales]), -4)))$
- D.  $(\text{ZN}(\text{SUM}([Sales])) - \text{LOOKUP}(\text{ZN}(\text{SUM}([Sales])), -4))$

**Answer: B**

Explanation:

The formula in option B calculates the percent difference in sales relative to the same quarter the previous year. It subtracts the sales of the same quarter from the previous year from the current year's sales, and then divides this by the previous year's sales. This gives a percentage change, which aligns with what is shown in the Calculation field of your dataset. The LOOKUP function returns the value of a specified offset from the current row in the partition. In this case, the offset is -4, which means the value of the same measure four rows above the current row. This corresponds to the same quarter of the previous year, assuming the data is sorted by quarter. References:

### NEW QUESTION # 78

You have the following line chart that shows the average sales by month.

Which month had the biggest increase in swage sales compared to the previous month in 2019?

- A. October
- B. August
- C. December
- D. November

**Answer: D**

### NEW QUESTION # 79

.....
