As you know, today's society is changing very fast. We also need new knowledge to fill in as we learn. And our DevOps-Foundation learning prep can suit you most in this need for you will get the according certification as well as the latest information. DevOps-Foundation Exam simulation is selected by many experts and constantly supplements and adjust our questions and answers. When you use our DevOps-Foundation study materials, you can find the information you need at any time.

Peoplecert DevOps-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Exploring DevOps: This section of the exam measures the skills of DevOps engineers and covers the foundations of DevOps, including its emergence as a critical discipline in the digital era. It introduces learners to the basic purpose, evolution, and significance of DevOps in modern software and infrastructure environments.
Topic 2	<ul style="list-style-type: none">Business and Technology Frameworks: This section of the exam measures the skills of IT operations specialists and covers various supporting frameworks that intersect with DevOps. These include Agile and Lean, IT Service Management, Value Stream Management, Site Reliability Engineering, Safety Culture, Learning Organisations, and Continuous Funding models that enable long-term adaptability.
Topic 3	<ul style="list-style-type: none">Sharing, Shadowing and Evolving: This section of the exam measures the skills of IT operations specialists and covers the collaborative and adaptive elements of DevOps in enterprise settings. It explores leadership, typical barriers and risks, and outlines how organisations can evolve their DevOps practices through continuous learning, peer shadowing, and experience-based transformation.
Topic 4	<ul style="list-style-type: none">Automation, Architecting DevOps Toolchains: This section of the exam measures the skills of IT operations specialists and covers key automation principles within the DevOps toolchain. It focuses on CICD pipelines, Infrastructure as Code, containerisation, cloud-native architecture, platform engineering, and emerging technologies like Machine Learning and Generative AI in DevOps contexts.

2026 Updated DevOps-Foundation Reliable Exam Tutorial Help You Pass

DevOps-Foundation Easily

We will refund your money if you fail to pass the exam after buying DevOps-Foundation study materials. If you choose us, we will ensure you pass the exam. And we are pass guaranteed and money back guaranteed. Besides, DevOps-Foundation study materials of us will help you pass the exam just one time. With professional experts to compile the DevOps-Foundation Exam Dumps, they are high- quality. And we also have online and offline chat service stuff, who possess the professional knowledge about the DevOps-Foundation study materials, and if you have any questions, just contact us, we will give you reply as quickly as possible.

Peoplecert PeopleCert DevOps Foundationv3.6Exam Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which framework ensures that ITSM processes are designed with just enough control and structure in order to effectively and efficiently deliver services that facilitate customer outcomes when and how they are needed?

- A. DevOps
- B. Agile Service Management
- C. COBIT
- D. ITIL

Answer: B

Explanation:

Agile Service Management (Agile SM) applies Agile principles to the design and improvement of IT Service Management (ITSM) processes. Its goal is to create processes that are lightweight, adaptable, and customer- focused, ensuring they provide just enough control to meet objectives without creating unnecessary bureaucracy.

This framework helps align ITSM practices with the speed and flexibility required in a DevOps environment, ensuring that services can be delivered in a timely, efficient, and outcome-focused manner.

A (ITIL) provides a comprehensive ITSM framework but is not inherently Agile. B (COBIT) focuses on governance rather than process agility. D (DevOps) is a cultural and technical movement, not specifically a framework for ITSM process design.

Thus, C is correct.

Agile Service Management Guide- ITSM Process Agility Principles

NEW QUESTION # 78

An organization currently manages projects using traditional waterfall methods. ITIL processes are equally rigorous. A new CIO has been hired to increase IT performance and introduce DevOps practices.

Initially, which of the following would be critical success factors for DevOps?

- A. Both B and C
- B. Application of agile and lean methods
- C. Forming a pilot DevOps team
- D. Management commitment to culture change

Answer: A

Explanation:

Both B and C (Application of agile and lean methods + Management commitment to culture change) are critical success factors when launching DevOps in a traditional IT organization.

* Agile/Lean methods: Accelerate delivery, reduce waste, create feedback.

* Management commitment to culture change: Essential for breaking silos, changing behaviors, and making DevOps sustainable.

Forming a pilot team (A) helps, but isn't sufficient without these foundations.

Extract-style reference:

"DevOps success starts with leadership commitment to cultural change and adopting Agile and Lean principles throughout the organization."

-DevOps Handbook, State of DevOps Report

PeopleCert DevOps Foundation v3.6: Lists cultural commitment and Lean/Agile as prerequisites for DevOps transformation.

NEW QUESTION # 79

What is NOT a type of IT work?

- A. Planned work
- B. Business projects
- C. Unplanned work
- **D. Manufacturing**

Answer: D

Explanation:

Manufacturing is not a type of IT work in DevOps.

DevOps classifies IT work as:

- * Business projects: New value-creating work.
- * Planned work: Routine, repeatable tasks (maintenance, upgrades).
- * Unplanned work: Incidents, emergencies, support.

Extract-style reference:

"IT work includes business projects, planned work, and unplanned work. Manufacturing is an analogy for flow, but not a category of IT work itself."

-The Phoenix Project

PeopleCert DevOps Foundation v3.6: Recognizes these three categories to manage and improve IT workloads.

NEW QUESTION # 80

Which of the following MOST accurately describes DevOps?

- **A. A cultural and professional movement**
- B. A standard
- C. A team
- D. A methodology

Answer: A

Explanation:

DevOps is not simply a team, methodology, or standard. The PeopleCert DevOps Foundation v3.6 materials define DevOps as a "cultural and professional movement" that stresses communication, collaboration, integration, and automation to improve workflow between software developers and IT operations professionals. The cultural transformation is fundamental, emphasizing shared responsibilities, breaking down silos, and fostering continuous improvement.

Reference: DevOps Foundation v3.6 syllabus section 1.1; State of DevOps Report; "The Phoenix Project".

NEW QUESTION # 81

Which two measures together BEST show shared success across technology teams?

- **A. Throughput and stability**
- B. Deployment frequency and change lead/cycle time
- C. Employee retention and Net Promoter Score
- D. Mean Time to Repair (MTTR) and change failure rate

Answer: A

Explanation:

The two best measures to show shared success across technology teams are throughput and stability:

- * Throughput (deployment frequency, lead time): Measures how fast teams deliver value.
- * Stability (change failure rate, MTTR): Measures how reliably systems operate.

Why these two?

Focusing on both ensures teams deliver quickly and safely. High throughput without stability causes outages; stability without throughput slows business.

Other options:

- * Deployment frequency + change lead/cycle time: Both are throughput measures, missing stability.
- * MTTR + change failure rate: Both are stability, missing throughput.

Extract-style reference:

-Accelerate: The Science of Lean Software and DevOps, Ch. 2
