

100% Pass Quiz Trustable Juniper - New JN0-106 Test Camp

100% Pass 2023 Juniper Marvelous JN0-422: Automation and DevOps, Specialist (JNCIS-DevOps) Free Brain Dumps

Time management skills can help students gain excellent marks in the JN0-422 exam. It will bring a big change in your life and make it possible to achieve my goal.

JN0-422 free demo questions for easy pass. The Automation and DevOps, Specialist (JNCIS-DevOps) real dumps by ValidDumps that are available in three formats get updates every three months as per the feedback received from industry professionals.

What a cruel and realistic society you may feel, Contemporarily, [New Exam JN0-422 Materials](#) competence far outweighs family backgrounds and academic degrees. Juniper Certification exam requires the candidates to have thorough understanding on (<https://www.validdumps.top/JN0-422-exam-torrent.html>) the syllabus contents as well as practical exposure of various concepts of Juniper Certification certification.

JN0-422 Automation and DevOps, Specialist (JNCIS-DevOps) genuine dumps are designed in the three best formats. As our Automation and DevOps, Specialist (JNCIS-DevOps) study questions can bring more professional quality service for the user.

NEW QUESTION 25

You need to reset all Junos systems in your lab to their factory-default state and then push a new configuration to the device.

Which two Ansible modules would your playbook use to accomplish this task? (Choose two.)

- A. `Junos_install_conf`
- B. `Junos_zeroize`
- C. `Junos_system_services`
- D. `Junos_get_facts`

Answer: A,B

NEW QUESTION 26

A customer has a control machine with a default Ansible installation. During execution of an Ansible module, the Ansible control machine generates the no hosts matched error.

Which statement is correct in this scenario?

- A. The target device was not defined in `/etc/hosts` on the control machine.
- B. The target device was not defined in `/etc/ansible/inventory/hosts` on the control machine.
- C. The target device was not defined in `/etc/ansible/hosts` on the control machine.
- D. The target device was not defined on the associated DNS servers.

Answer: C

If you purchase our JN0-106 practice materials, we believe that your life will get better and better. You may find a better job with a higher salary or your company will give you a promotion on your JN0-106 certification. So why still hesitate? Act now, join us, and buy our JN0-106 Study Materials. You will feel very happy that you will be about to change well because of our JN0-106 study guide.

Since the software keeps a record of your attempts, you can overcome mistakes before the JN0-106 final exam attempt. Knowing the style of the Juniper JN0-106 examination is a great help to pass the test and this feature is one of the perks you will get in the desktop practice exam software.

Juniper JN0-106 Latest Braindumps Free - Latest JN0-106 Test Voucher

PDFTorrent provides updated and valid Juniper JN0-106 Exam Questions because we are aware of the absolute importance of updates, keeping in mind the Juniper JN0-106 Exam Syllabus. We provide you update checks for 365 days after purchase for absolutely no cost. And the Junos, Associate (JNCIA-Junos) JN0-106 price is affordable.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q53-Q58):

NEW QUESTION # 53

Referring to the exhibit, which routing configuration is required for these two users to access the remote server?

- A. Trunk ports must be enabled on the switch.
- **B. Users and the server require a default gateway.**
- C. A routing protocol must be enabled on the router.
- D. Users must connect directly to the router.

Answer: B

Explanation:

In a typical network configuration, users and servers require a default gateway to communicate with devices on different networks or subnets. The default gateway is usually the router's interface on the same network, which routes the traffic to other networks. This is essential for the two users to access the remote server if the server is on a different subnet, which is indicated by the different network addresses.

NEW QUESTION # 54

What is the protocol data unit (PDU) of the Data Link Layer?

- A. byte
- B. bit
- C. segment
- **D. frame**

Answer: D

Explanation:

In the OSI model, the Data Link Layer is responsible for node-to-node delivery of data. It frames the packets received from the Network Layer and prepares them for physical transmission. The Protocol Data Unit (PDU) for the Data Link Layer is called a "frame." Frames encapsulate the network layer packets, adding a header and a trailer that include the hardware addresses of the source and destination, among other things, facilitating the data link layer services like frame synchronization, flow control, and error checking.

NEW QUESTION # 55

By default, how does the PFE manage unicast traffic destined for an existing forwarding table entry?

- **A. It sends the traffic through one port toward its destination.**
- B. It sends the traffic through multiple ports toward its destination.
- C. It sends all traffic to the control plane for further processing.
- D. It sends the traffic through the fxpl interface to the RE.

Answer: A

Explanation:

In a Juniper Networks device, the Packet Forwarding Engine (PFE) processes unicast traffic by forwarding it according to the existing entries in the forwarding table. When the PFE encounters unicast traffic destined for an address that has a corresponding entry in the forwarding table, it directs the traffic through a specific outgoing interface or port toward its destination. This process is based on the most efficient path determined by the routing protocols in use, ensuring that the packet reaches its intended destination through a singular path, unless specific configurations such as load balancing are in place.

NEW QUESTION # 56

Which two statements are correct about a Routing Engine? (Choose two.)

- A. It forwards transit traffic.
- **B. It maintains routing tables.**
- C. It processes CoS marked traffic.
- **D. It processes management traffic.**

Answer: B,D

Explanation:

The Routing Engine (RE) in Juniper Networks devices plays a pivotal role in the control plane, handling tasks that are critical for the operation and management of the network. One of its key functions is processing management traffic, which includes user commands, system configuration, and monitoring operations. The RE also maintains routing tables, which are essential for network routing decisions. These tables contain network topology information and routing paths, which the RE uses to update the Packet Forwarding Engine (PFE) so that it can forward packets appropriately. The RE does not forward transit traffic or process Class of Service (CoS) marked traffic, as these tasks are handled by the PFE.

NEW QUESTION # 57

Which statement is correct about the candidate configuration in the Junos OS?

- A. It is only used to restore the configuration to factory default settings.
- B. It is created when you execute a commit from the CLI.
- C. It contains the most recent rescue configuration.
- **D. It contains changes that have not been committed.**

Answer: D

Explanation:

The candidate configuration in Junos OS holds configuration changes made in configuration mode that have not yet been committed to the active configuration.

NEW QUESTION # 58

.....

Do you want to spend the least time to pass your exam? If you do, then we will be your best choice. JN0-106 training materials are compiled by experienced experts who are quite familiar with the exam center, so the quality can be guaranteed. In addition, JN0-106 exam materials contain most of the knowledge points for the exam, and you can have a good command of these knowledge points through practicing. In order to strengthen your confidence for the JN0-106 Exam Braindumps, we are pass guarantee and money back guarantee if you fail to pass the exam. The money will be returned to your payment account.
