

# Salesforce MuleSoft-Integration-Architect-I Exam Dumps - Obtain Brilliant Result [2026]

## Updated Salesforce Integration-Architect Exam Dumps - Prepare With Advanced Material

Increase your expertise by using the most effective Integration-Architect exam dumps and reach the most evaluated score within the Salesforce Certified Integration Architect certification exam by way of the guidance from the specialists. The Integration-Architect dumps pdf normally help you at the same time and you will conveniently finish all the Salesforce Certified Integration Architect exam demands as well. The **Salesforce Integration-Architect pdf questions** are checked by the experts so it is possible to simply and comfortably prepare by means of this. The experts will often allow you to through the preparation from the Integration Architect new questions so you could get the most beneficial assistance due to the fact they're pretty kind to their specialists. You are able to smoothly boost your information and get a deep understanding from the preparation material. Obtain the most beneficial results in the Salesforce certification exam and go much more around the career path.

## Practice As well Via The Salesforce Integration Architect PDF Dumps

Get the Salesforce Integration-Architect pdf dumps at inexpensive rates so you could quickly pass the Salesforce Certified Integration Architect exam by utilizing this enough supply of preparation. Our supplied Integration Architect exam questions are the extremely most recent so it is possible to very easily finish all the targets as well devoid of any doubt. Prepare simply by using the advanced Integration-Architect certification dumps and finish all of the targets and accomplish great final results. The preparation material is validated by highly experienced professionals so you'll obtain your targets by using the very best Integration-Architect braindumps. It is possible to get the genuine preparation material and increase your abilities by means of the guidance of specialists.

What's more, part of that PDF4Test MuleSoft-Integration-Architect-I dumps now are free: <https://drive.google.com/open?id=1SaHCuU4yBMjENEY39ZorWaF72C5C3Qq5>

If you are lack of skills in the preparation of getting the certification, our MuleSoft-Integration-Architect-I study materials are the best choice for you. Many people have successfully realized economic freedom after getting the MuleSoft-Integration-Architect-I certificate and changing a high salary job. So you need to act from now, come to join us and struggle together. Our MuleSoft-Integration-Architect-I Study Materials will help you change into social elite and you will never feel disappointed.

## Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Designing Integration Solutions to Meet Performance Requirements: This topic covers meeting performance and capacity goals, using streaming features, and processing large message sequences.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Applying DevOps Practices and Operating Integration Solutions: Its sub-topics are related to designing CI</li><li>CD pipelines with MuleSoft plugins, automating interactions with Anypoint Platform, designing logging configurations, and identifying Anypoint Monitoring features.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Initiating Integration Solutions on Anypoint Platform: Summarizing MuleSoft Catalyst and Catalyst Knowledge Hub, differentiating between functional and non-functional requirements, selecting features for designing and managing APIs, and choosing deployment options are its sub-topics.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Designing Integration Solutions to Meet Persistence Requirements: It addresses the usage of VM queues and connectors, object stores and services, and stateful components configured with object stores.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Designing Automated Tests for Mule Applications: This topic covers unit test suites, and scenarios for integration and performance testing.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Designing Integration Solutions to Meet Reliability Requirements: It includes selecting alternatives to traditional transactions, recognizing the purpose of various scopes and strategies, differentiating disaster recovery and high availability, and using local and XA transactions.</li> </ul>

## MuleSoft-Integration-Architect-I Frequent Updates | MuleSoft-Integration-Architect-I Valid Test Tips

The Salesforce MuleSoft-Integration-Architect-I PDF is the collection of real, valid, and updated Salesforce MuleSoft-Integration-Architect-I practice questions. The MuleSoft-Integration-Architect-I PDF dumps file works with all smart devices. You can use the Salesforce Certified MuleSoft Integration Architect I PDF questions on your tablet, smartphone, or laptop and start MuleSoft-Integration-Architect-I Exam Preparation anytime and anywhere. The MuleSoft-Integration-Architect-I dumps PDF provides you with everything that you must need in Salesforce MuleSoft-Integration-Architect-I exam preparation and enable you to crack the final Salesforce MuleSoft-Integration-Architect-I exam quickly.

## Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q161-Q166):

### NEW QUESTION # 161

Refer to the exhibit.

An organization is sizing an Anypoint VPC for the non-production deployments of those Mule applications that connect to the organization's on-premises systems. This applies to approx. 60 Mule applications. Each application is deployed to two CloudHub i

workers. The organization currently has three non-production environments (DEV, SIT and UAT) that share this VPC. The AWS region of the VPC has two AZs.

The organization has a very mature DevOps approach which automatically progresses each application through all non-production environments before automatically deploying to production. This process results in several Mule application deployments per hour, using CloudHub's normal zero-downtime deployment feature.

What is a CIDR block for this VPC that results in the smallest usable private IP address range?

- A. 10.0.0.0/26 (64 IPS)
- B. 10.0.0.0/24 (256 IPs)
- C. 10.0.0.0/25 (128 IPs)
- **D. 10.0.0.0/22 (1024 IPs)**

**Answer: D**

Explanation:

Mule applications are deployed in CloudHub workers and each worker is assigned with a dedicated IP \* For zero downtime deployment, each worker in CloudHub needs additional IP addresses \* A few IPs in a VPC are reserved for infrastructure (generally 2 IPs) \* The IP addresses are usually in a private range with a subnet block specifier, such as 10.0.0.1/24 \* The smallest CIDR network subnet block you can assign for your VPC is /24 (256 IP addresses) (60\*3 env \* 2 worker per application) + 50% of (total) for zero downtime = 540 In this case correct answer is 10.0.0.0/22 as this provided 1024 IP's . Other IP's are insufficient.

#### NEW QUESTION # 162

A Mule application is deployed to a cluster of two(2) customer-hosted Mule runtimes. Currently the node name Alice is the primary node and node named bob is the secondary node. The mule application has a flow that polls a directory on a file system for new files.

The primary node Alice fails for an hour and then restarted.

After the Alice node completely restarts, from what node are the files polled, and what node is now the primary node for the cluster?

- A. Files are polled from Alice node  
Bob is the now the primary node
- B. Files are polled from Bob node  
Alice is now the primary node
- C. Files are polled from Alice node  
Alice is now the primary node
- **D. Files are polled from Bob node  
Bob is now the primary node**

**Answer: D**

Explanation:

\* Mule High Availability Clustering provides basic failover capability for Mule. \* When the primary Mule Runtime becomes unavailable, for example, because of a fatal JVM or hardware failure or it's taken offline for maintenance, a backup Mule Runtime immediately becomes the primary node and resumes processing where the failed instance left off. \* After a system administrator recovers a failed Mule Runtime server and puts it back online, that server automatically becomes the backup node. In this case, Alice, once up, will become backup

-----  
---- Reference: <https://docs.mulesoft.com/mule-runtime/4.3/hadr-guide> So correct choice is : Files are polled from Bob node Bob is now the primary node

#### NEW QUESTION # 163

A Mule application is synchronizing customer data between two different database systems.

What is the main benefit of using XA transaction over local transactions to synchronize these two database system?

- A. Simplifies communication
- B. Reduce latency
- **C. Ensure consistency**
- D. Increase throughput

**Answer: C**

Explanation:

\* XA transaction add tremendous latency so "Reduce Latency" is incorrect option XA transactions define "All or No" commit protocol.

\* Each local XA resource manager supports the A.C.I.D properties (Atomicity, Consistency, Isolation, and Durability).

----- So correct choice is "Ensure consistency" Reference: <https://docs.mulesoft.com/mule-runtime/4.3/xa-transactions>

#### NEW QUESTION # 164

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

- A. Supply Chain Management (SCM)
- B. Business-to-Business (B2B)
- **C. Customer Relationship Management (CRM)**
- D. IT Service Management (ITSM)

**Answer: C**

Explanation:

Customer Relationship Management (CRM) systems are designed to manage a company's interactions with current and potential customers. They provide capabilities for tracking prospect data, managing customer interactions, and analyzing customer information to improve cross-selling opportunities. By using a CRM system, organizations can consolidate customer information, enhance customer relationships, and leverage data analytics to drive sales and marketing efforts.

References:

\* What is CRM?

\* Benefits of CRM Systems

#### NEW QUESTION # 165

A company is modernizing its legal systems to accelerate access to applications and data while supporting the adoption of new technologies. The key to achieving this business goal is unlocking the companies' key systems and data including microservices running under Docker and Kubernetes containers using APIs.

Considering the current aggressive backlog and project delivery requirements the company wants to take a strategic approach in the first phase of its transformation projects by quickly deploying APIs in mule runtime that are able to scale, connect to on-premises systems and migrate as needed.

Which runtime deployment option supports company's goals?

- A. Runtime fabric on VMware metal
- B. Cloudhub runtimes
- **C. Runtime fabric on self-managed Kubernetes**
- D. Customer hosted self-provisioned runtimes

**Answer: C**

Explanation:

To support the company's goals of unlocking key systems and data, quickly deploying scalable APIs, and connecting to on-premises systems, while also preparing for future migrations, the best runtime deployment option is using Runtime Fabric on self-managed Kubernetes. Here's why:

\* Scalability: Kubernetes is designed to scale applications easily and efficiently. By deploying Mule runtimes on a self-managed Kubernetes cluster, the company can dynamically scale its APIs based on demand, ensuring performance and reliability.

\* Flexibility: Running on self-managed Kubernetes allows the company to have control over the infrastructure. They can customize the environment to meet their specific needs, integrate with existing on-premises systems, and support their microservices architecture running in Docker containers.

\* Future-Proofing: Kubernetes supports hybrid and multi-cloud deployments, making it easier to migrate workloads between different environments as needed. This aligns with the company's goal of being able to migrate their systems as part of their strategic approach.

\* Efficiency: By leveraging Kubernetes, the company can automate deployment, scaling, and management of containerized

applications, reducing the burden on IT and DevOps teams.

References:

\* MuleSoft Documentation on Runtime Fabric: <https://docs.mulesoft.com/runtime-fabric/1.9/>

\* Kubernetes Documentation: <https://kubernetes.io/docs/home/>

## NEW QUESTION # 166

.....

Briefly speaking, our MuleSoft-Integration-Architect-I training guide gives priority to the quality and service and will bring the clients the brand new experiences and comfortable feelings. As the pass rate of our MuleSoft-Integration-Architect-I exam questions is high as 98% to 100%. Numerous of our loyal customers praised that they felt cool to study with our MuleSoft-Integration-Architect-I Study Guide and pass the exam. The 24/7 service also let them feel at ease for they can contact with us at any time. What are you still hesitating for? Hurry to buy our MuleSoft-Integration-Architect-I learning engine now!
