

HPE7-A08 Valid Test Tutorial | Real HPE7-A08 Dumps

P.S. Free & New HPE7-A08 dumps are available on Google Drive shared by DumpExam: <https://drive.google.com/open?id=1Li1m00x7UgC2L0f25Vtjy6b8a0zvaOZ>

The DumpExam is one of the reliable and trusted platforms that has been offering top-notch, real, and updated HPE7-A08 practice test questions for many years. Over this long time period, thousands of HP HPE7-A08 certification exam candidates have passed their HPE7-A08 certification exam. They all used valid, updated, and real HPE Aruba Networking Switching Professional Exam HPE7-A08 Exam Dumps and got ready to perform well in the final HPE7-A08 test. You can trust DumpExam HPE7-A08 practice test questions and start HPE Aruba Networking Switching Professional Exam HPE7-A08 test preparation without wasting further time.

Obtaining an IT certification shows you are an ambitious individual who is always looking to improve your skill set. Most companies think highly of this character. Our HPE7-A08 exam original questions will help you clear exam certainly in a short time. You don't need to worry about how difficulty the exams are. DumpExam release the best high-quality HPE7-A08 Exam original questions to help you most candidates pass exams and achieve their goal surely.

Real HPE7-A08 Dumps | Exam HPE7-A08 Learning

The HPE7-A08 PDF is the collection of real, valid, and updated HPE Aruba Networking Switching Professional Exam (HPE7-A08) practice questions. The HP HPE7-A08 PDF dumps file works with all smart devices. You can use the HPE7-A08 PDF questions on your tablet, smartphone, or laptop and start HPE7-A08 Exam Preparation anytime and anywhere. The HPE7-A08 dumps PDF provides you with everything that you must need in HPE7-A08 exam preparation and enable you to crack the final HPE7-A08 exam quickly.

HP HPE7-A08 Exam Syllabus Topics:

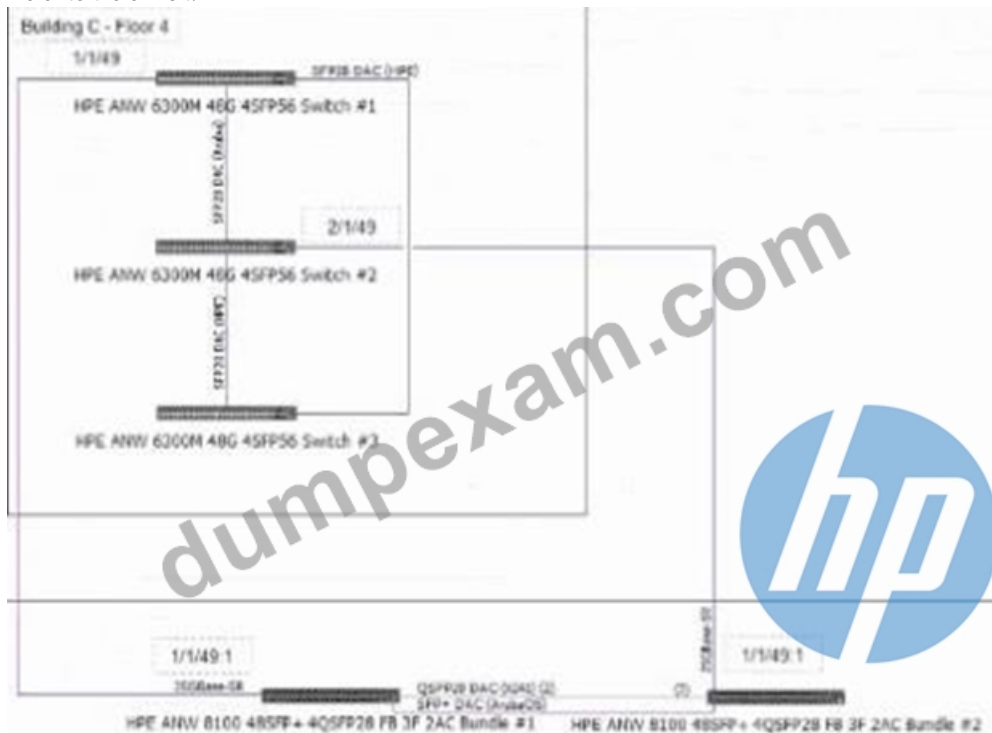

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Create the Implementation Plan for the Wired Network Solution: This section measures the skills of Network Designers who focus on understanding the HPE switching portfolio and selecting the right products to match various customer requirements. Candidates must also demonstrate the ability to create detailed and effective implementation plans based on given designs or customer scenarios to ensure successful wired network deployments.
Topic 2	<ul style="list-style-type: none"> • Troubleshoot the Wired Network Solution: Candidates in this section, typically Network Support Specialists, are tested on identifying common wired network failures such as IP or VLAN mismatches, hardware issues, or port misconfigurations. It also involves analyzing performance problems caused by QoS or configuration errors and formulating effective remediation plans to restore correct network operations.
Topic 3	<ul style="list-style-type: none"> • Install and Configure the Wired Network Solution: This domain evaluates the abilities of Network Engineers to provision and configure HPE Aruba Networking switches both via Aruba Networking Central and command-line interface. It covers physical switch setup, Layer 2 and Layer 3 configuration and validation, multicast features, security implementations, quality of service (QoS) settings, and integration of Aruba Networking solutions into existing environments.
Topic 4	<ul style="list-style-type: none"> • Manage, Maintain, Optimize, and Monitor the Wired Network Solution: This part measures the skills of Network Operations Engineers in managing and maintaining wired network infrastructures. It includes developing configuration management strategies, interpreting network operational data to make informed decisions, and programmatically auditing or configuring Aruba Networking switches to optimize performance and reliability.

HPE Aruba Networking Switching Professional Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

Refer to the exhibit:

Building A - Floor 0

A senior network architect has created the configuration above. You are implementing the setup in Building A and C. The actual fiber distance between the building locations is 200m / 656ft utilizing OM4 cabling.

What needs to be changed in the configuration based on the actual environmental conditions to complete the installation and 7 other CX 6300 VSF stack connections in the future?

- A. Replace the 25GR optics with 10LR
- **B. Replace the 25GR optics with 25SR**
- C. Replace the 25GR optics with 25LR
- D. Replace the 25GR optics with 10SR

Answer: B

Explanation:

The configuration involves connecting two buildings over fiber using OM4 cabling with a distance of 200 meters. The current optics in use are 25GR (25 Gigabit Rate) optics.

For multimode fiber such as OM4, SR (Short Reach) optics are suitable for distances up to 300 meters. In contrast, LR (Long Reach) optics are typically designed for single-mode fiber and longer distances.

Therefore, to properly support the 200m OM4 fiber link, 25SR optics should be used instead of 25GR (which are often long-reach optics).

10SR and 10LR refer to 10Gbps optics, which do not meet the 25Gbps requirement.

25LR optics are for single-mode fiber and longer distances, not multimode.

NEW QUESTION # 22

Which two CLI commands verify active MAC-based security settings? (Select two)

- **A. show port-security**
- **B. show mac-address-table secure**
- C. show mac-security status
- D. show interface security

Answer: A,B

Explanation:

The show port-security and show mac-address-table secure commands display secured MAC addresses, helping administrators enforce network access policies.

NEW QUESTION # 23

A customer has connected a server to VLAN 100 on a 6300 switch which is streaming video using multicast group 224.0.0.100. This stream would need to be received by the clients in VLANs 200 and 300, routed on the same CX switch.

What needs to be done to enable the requirement?

- A. The multicast group address needs to be changed to other 224.0.0.x non-overlapping address.
- B. The igmp-snooping needs to be enabled on SVIs 100, 200, and 300.
- C. The igmp needs to be enabled on the SVIs 100, 200, and 300.
- **D. The multicast group address needs to be changed to a routable subnet.**

Answer: D

Explanation:

In the world of IP Multicast, the address range is strictly categorized by the IANA. Understanding these boundaries is a core requirement for the ACP-S switching exam.

* Link-Local Multicast (224.0.0.0/24): The address used in the scenario, 224.0.0.100, falls within the "Local Network Control Block" (224.0.0.0 to 224.0.0.255). These addresses are reserved for protocol traffic that is intended to stay within a single broadcast domain (Layer 2). Examples include OSPF (224.0.0.5) and RIPv2 (224.0.0.9).

* The Routing Restriction: By design and industry standard, Layer 3 switches and routers do not forward traffic addressed to the 224.0.0.0/24 range. This is a hard-coded behavior to prevent control plane protocols from leaking into other parts of the network. Even if you enable PIM (Protocol Independent Multicast) and IGMP on all SVIs, the switch will drop these packets at the Layer 3 boundary.

* The Solution: To route multicast traffic between VLAN 100 and VLANs 200/300, the application must use a group address from the administratively scoped or globally scoped ranges (e.g., 239.0.0.0/8 or

224.0.1.0 and above).

* Why Option D is insufficient: While enabling IGMP and PIM on the SVIs is a necessary step for routable multicast, it will not overcome the fundamental architectural block placed on the 224.0.0.0/24 link-local range.

NEW QUESTION # 24

After onboarding three new AOS-10 gateways using the full-setup method into the same HPE Aruba Networking Central group, a customer cannot log in to one of the gateways using the HPE Aruba Networking Central remote console due to an incorrect password. What is causing this issue?

- A. The admin password created using full-setup does not match the global HPE Aruba Networking Central admin password
- B. The admin password created during the full-setup process is not configured to allow the remote console access
- C. The admin password created during the full-setup process does not match the HPE Aruba Networking Central group admin password
- D. The admin password created at the HPE Aruba Networking Central group level has expired

Answer: C

NEW QUESTION # 25

Which commands help identify physical interface issues?

(Select two.)

Response:

- A. show spanning-tree
- B. show ip route
- C. show interfaces
- D. show lldp neighbors

Answer: C,D

NEW QUESTION # 26

.....

When you have a lot of electronic devices, you definitely will figure out the way to study and prepare your HPE7-A08 exam with them. It is so cool even to think about it. As we all know that the electronic equipment provides the convenience out of your imagination. With our APP online version of our HPE7-A08 practice materials, your attempt will come true. Our HPE7-A08 exam dumps can be quickly downloaded to the electronic devices.
