Microsoft Collaboration Communications Systems Engineer Sample Questions (Q43-Q48):

NEW QUESTION # 43
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company uses configuration profiles to manage Microsoft Teams-certified IP phones. The Standard configuration profile is applied to the IP phones.
The help desk receives reports that several user phones fail to lock automatically after the timeout period.
You need to verify whether the configuration profile is applied to the problematic phones.
Solution: From Devices in the Microsoft Teams admin center, you select Phones, find the reported phones, and review the Configuration profile column.
Does this meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION # 44
You have a Microsoft 365 tenant that has Modem authentication enabled for all services Multi- factor authentication (MFA) is enforced for all users.
You are deploying Microsoft Teams Rooms.
The first time you attempt to sign in to a Teams Rooms, you receive an error message indicating that the device cannot sign in to Teams.
You verify that Modern authentication is enabled in Teams Rooms.
What prevents you from signing in?

- A. MFA is unsupported in Teams Rooms
- B. Teams Rooms must be domain-joined first
- C. The Microsoft Authenticator app is not configured for the Teams Rooms account
- D. The Teams Rooms account is not licensed for Microsoft Intune

Answer: A

NEW QUESTION # 45
You have a Microsoft Teams deployment that has Teams Premium licenses.
You create and assign an enhanced encryption policy for sensitive Teams meetings.
Which meeting feature is available in an encrypted meeting?

- A. screen sharing
- B. breakout rooms
- C. recording
- D. Copilot for Teams meetings

Answer: A

Explanation:
When you apply enhanced encryption to a Teams meeting, it ensures that meeting data is protected both in transit and at rest. While enhanced encryption increases security, certain features that involve data storage, such as recording, may be restricted to prevent sensitive information from being stored.
Screen sharing in Teams can still be allowed during encrypted meetings because it is a real-time activity, and the content being shared is encrypted during transmission. This makes it a secure feature that can continue to function even under stricter encryption policies.

NEW QUESTION # 46

You have a Microsoft Teams deployment that contains two users named Userl and User2. You need to plan a webinar that meets the following requirements:
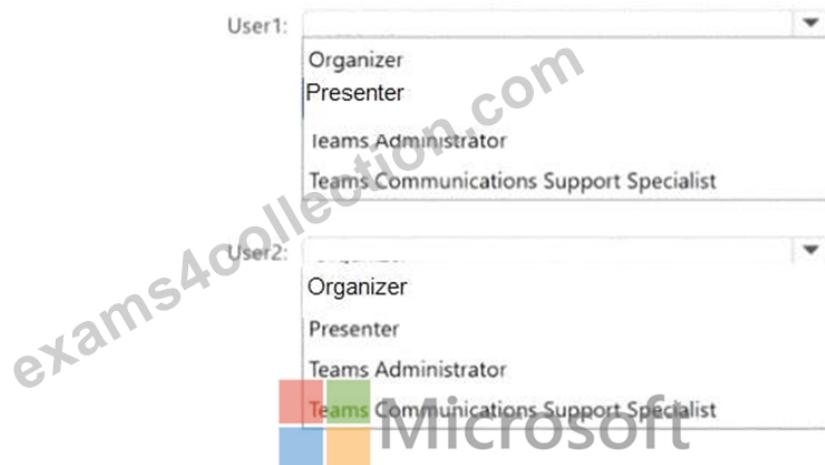

* User1 must be able to control the availability of the whiteboard and shared notes.

* User2 must be able to customize the webinar's theme and enable a green room.

Which role should you assign to each user? To answer, select the appropriate options in the answer area.
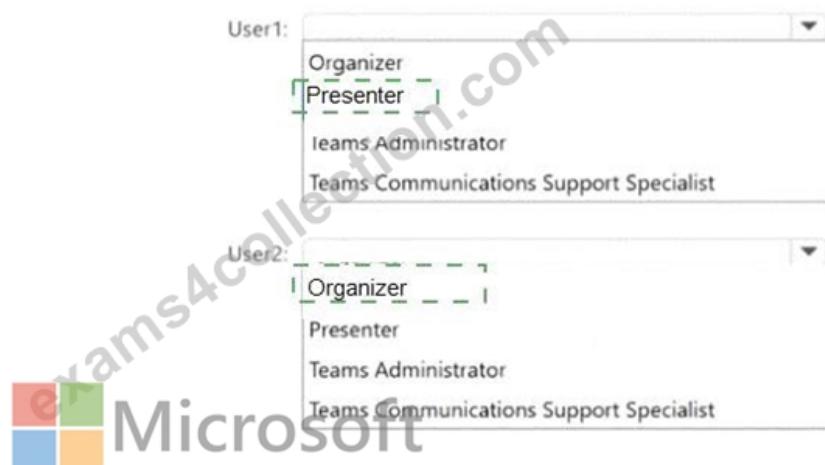

NOTE: Each correct selection is worth one point.

Answer Area

User1:
- Organizer
- Presenter
- Ieams Administrator
- Teams Communications Support Specialist

User2:
- Organizer
- Presenter
- Teams Administrator
- Teams Communications Support Specialist

Answer:

Explanation:

Answer Area

User1:
- Organizer
- **Presenter**
- Ieams Administrator
- Teams Communications Support Specialist

User2:
- **Organizer**
- Presenter
- Teams Administrator
- Teams Communications Support Specialist

Explanation:

Answer Area

User1: Presenter

User2: Organizer

NEW QUESTION # 47

Your company configures an environment that contains Skype for Business 2019 on-premises and Teams. Direct Routing is enabled for the company. The manager plans to move common area phones used within Skype for Business 2019 on-premises to Teams. You need to identify the appropriate roles that would enable the manager to move common area phones from Skype for Business 2019 on-premises to Teams.

Which two roles should you identify? Each correct answer presents part of the solution.

- A. Service Support admin
- B. CSServerAdminstrator
- C. Teams Communications Support Engineer
- D. Global administrator
- E. Teams Device Administrator

Answer: B,D

Explanation:
You should identify the Global administrator role. This is a role that the manager must have within their Teams tenant to be able to move the common area phones used within Skype for Business
2019 on-premises to Teams. Common area phones are used as a lobby where users can make calls. A Global administrator role enables a user to have full control over the settings and features of the company's tenant.
You should also identify the CSServerAdminstrator role. The Server Administrator is the user that has full control over the settings and features within Skype for Business Server 2019. When a user has both of these roles, they will be able to move or migrate the common area phones that are used within on-premises Skype for Business 2019 to Teams.
You should not identify the Teams Communications Support Engineer role. This role permits a user to fully access Call Analytics within the Teams Admin Center. Call Analytics is a dashboard within the Teams admin center that contains details related to the meetings attended by each user within the Teams app. This role will not enable the manager to move the common area phones as required.
You should not identify the Teams Device Administrator role. This role enables a user to manage the devices that are using the Microsoft Teams service within the same tenant, and this user can update and restart the devices and even manage configurations for them. This role does not give the user permission to move common area phones as required.
You should not identify the Service Support admin role. This role is used for managing service requests within Microsoft 365 and for viewing the message center posts. This role does not enable moving common area phones as required.
