Certified Application Developer-ServiceNow certification showcases the developer's expertise in the ServiceNow platform and increases their chances of getting hired by companies that use ServiceNow. Certified Application Developer-ServiceNow certification also opens up new career opportunities for developers, such as ServiceNow developers, administrators, and consultants.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q140-Q145):

NEW QUESTION # 140

Which are reasons an application could be developed on the ServiceNow platform?

Choose 3 answers

- A. It needs workflow to manage processes.
- B. It uses multimedia features.
- C. It requires low-level programming libraries.
- D. It uses forms extensively to interact with data.
- E. It requires reporting capabilities.

Answer: A,D,E

Explanation:

The ServiceNow platform is designed to create applications that use forms, workflow, and reporting to solve business problems. Forms are used to interact with data stored in tables, workflow is used to automate and orchestrate processes, and reporting is used to visualize and analyze data. The platform does not require low-level programming libraries or multimedia features, as it provides standard tools and technologies for application development.

NEW QUESTION # 141

When configuring a REST Message, the Endpoint is:

- A. Information about the format of the returned data
- B. The URI of the data to be accessed, queried, or modified
- C. The response from the provider indicating there is no data to send back
- D. The commands to the REST script to stop execution

Answer: B

Explanation:

Explanation/Reference: https://docs.servicenow.com/bundle/orlando-application-development/page/integrate/outbound-rest/reference/r_RESTMessageElements.html

NEW QUESTION # 142

Which platform feature can be used to determine the relationships between field in an Import Set table to field in an existing ServiceNow table?

- A. Data Sources
- B. Business Service Management Map
- C. CI Relationship Builder
- D. Transform Map

Answer: D

Explanation:

A transform map determines the relationships between fields displaying in an Import Set table and fields in an existing ServiceNow table, such as the Incidents or Users table.

Reference:

The following platform feature can be used to determine the relationships between fields in an Import Set table to fields in an existing ServiceNow table:

Transform Map. This is a feature that defines the mapping between the fields of an Import Set table and the fields of a target table, such as incident, problem, or user. A transform map also specifies the logic and rules for transforming the imported data, such as coalescing, scripting, or applying data policies.

The following platform features are not used to determine the relationships between fields in an Import Set table to fields in an existing ServiceNow table:

Business Service Management Map. This is a feature that provides a graphical representation of the configuration items (CIs) and

their relationships in the Configuration Management Database (CMDB). A Business Service Management Map can be used to visualize the impact of incidents, changes, or problems on the CIs and the services they support.

Data Sources. This is a feature that defines the connection and authentication information for an external data source, such as a file, a JDBC database, or a web service. A data source is used to import data from the external source into an Import Set table.

CI Relationship Builder. This is a feature that creates relationships between CIs in the CMDB based on predefined or custom rules. A CI Relationship Builder can be used to populate the CMDB with the dependencies and connections between the CIs.
