

# Professional-Cloud-Architect Exam Simulator, Reliable Professional-Cloud-Architect Dumps Questions

P.S. Free 2026 Google Professional-Cloud-Architect dumps are available on Google Drive shared by DumpsMaterials:  
<https://drive.google.com/open?id=1koOH2vUPIIHosdNjPQUX1XKFLpbN1FaJ>

A good learning platform should not only have abundant learning resources, but the most intrinsic things are very important, and the most intuitive things to users are also indispensable. Imagine, if you're using a Professional-Cloud-Architect practice materials, always appear this or that grammar, spelling errors, such as this will not only greatly affect your mood, but also restricted your learning efficiency. Therefore, good typesetting is essential for a product, especially education products, and the Professional-Cloud-Architect test material can avoid these risks very well.

To prepare for the Google Professional-Cloud-Architect exam, candidates should have experience in designing and implementing cloud solutions using GCP. They should also have a good understanding of cloud computing concepts, such as virtualization, networking, and storage. Google recommends that candidates complete the Architecting with Google Cloud Platform specialization on Coursera before taking the exam.

The Google Professional Cloud Architect certification exam equips the individuals with the skills required to help enterprises apply Google Cloud technologies.

The Google Professional-Cloud-Architect Exam is made up of multiple-choice questions that cover a range of topics, including cloud architecture, security, networking, and data management. Candidates are expected to have a strong understanding of cloud computing technologies and best practices, as well as the ability to apply this knowledge to real-world scenarios. Professional-Cloud-Architect exam is designed to be challenging, with a passing score of 70% required to earn the certification.

## Reliable Google Professional-Cloud-Architect Dumps Questions - Exam Professional-Cloud-Architect Assessment

Our Professional-Cloud-Architect practice torrent offers you more than 99% pass guarantee, which means that if you study our Professional-Cloud-Architect materials by heart and take our suggestion into consideration, you will absolutely get the Professional-Cloud-Architect certificate and achieve your goal. Meanwhile, if you want to keep studying this course, you can still enjoy the well-rounded services by Professional-Cloud-Architect Test Prep, our after-sale services can update your existing Professional-Cloud-Architect study materials within a year and a discount more than one year.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q14-Q19):

### NEW QUESTION # 14

For this question, refer to the Dress4Win case study.

You want to ensure Dress4Win's sales and tax records remain available for infrequent viewing by auditors for at least 10 years. Cost optimization is your top priority. Which cloud services should you choose?

- A. Google Cloud Storage Nearline to store the data, and gsutil to access the data.
- **B. Google Cloud Storage Coldline to store the data, and gsutil to access the data.**
- C. Google Bigtable with US or EU as location to store the data, and gcloud to access the data.
- D. BigQuery to store the data, and a web server cluster in a managed instance group to access the data. Google Cloud SQL mirrored across two distinct regions to store the data, and a Redis cluster in a managed instance group to access the data.

**Answer: B**

Explanation:

Reference:

References: <https://cloud.google.com/storage/docs/storage-classes>

#### NEW QUESTION # 15

You are using Cloud CDN to deliver static HTTP(S) website content hosted on a Compute Engine instance group. You want to improve the cache hit ratio.

What should you do?

- A. Replicate the static content in a Cloud Storage bucket. Point CloudCDN toward a load balancer on that bucket.
- B. Make sure the HTTP(S) header "Cache-Region" points to the closest region of your users.
- C. Shorten the expiration time of the cached objects.
- **D. Customize the cache keys to omit the protocol from the key.**

**Answer: D**

Explanation:

Reference [https://cloud.google.com/cdn/docs/bestpractices#](https://cloud.google.com/cdn/docs/bestpractices#using_custom_cache_keys_to_improve_cache_hit_ratio)

[using\\_custom\\_cache\\_keys\\_to\\_improve\\_cache\\_hit\\_ratio](https://cloud.google.com/cdn/docs/bestpractices#using_custom_cache_keys_to_improve_cache_hit_ratio)

#### NEW QUESTION # 16

You have deployed several instances on Compute Engine. As a security requirement, instances cannot have a public IP address. There is no VPN connection between Google Cloud and your office, and you need to connect via SSH into a specific machine without violating the security requirements. What should you do?

- **A. Configure Identity-Aware Proxy (IAP) for the instance and ensure that you have the role of IAP-secured Tunnel User. Use the gcloud command line tool to ssh into the instance.**
- B. Configure Cloud NAT on the subnet where the instance is hosted. Create an SSH connection to the Cloud NAT IP address to reach the instance.
- C. Add all instances to an unmanaged instance group. Configure TCP Proxy Load Balancing with the instance group as a backend. Connect to the instance using the TCP Proxy IP.
- D. Create a bastion host in the network to SSH into the bastion host from your office location. From the bastion host, SSH into the desired instance.

**Answer: A**

Explanation:

Explanation

[https://cloud.google.com/iap/docs/using-tcp-forwarding#tunneling\\_with\\_ssh](https://cloud.google.com/iap/docs/using-tcp-forwarding#tunneling_with_ssh) Leveraging the BeyondCorp security model. "This January, we enhanced context-aware access capabilities in Cloud Identity-Aware Proxy (IAP) to help you protect SSH and RDP access to your virtual machines (VMs)-without needing to provide your VMs with public IP addresses, and without having to set up bastion hosts. "

#### NEW QUESTION # 17

A news feed web service has the following code running on Google App Engine. During peak load, users report that they can see

news articles they already viewed. What is the most likely cause of this problem?

- A. The session variable is local to just a single instance.
- **B. The session variable is being overwritten in Cloud Datastore.**
- C. The URL of the API needs to be modified to prevent caching.
- D. The HTTP Expires header needs to be set to -1 to stop caching.

**Answer: B**

Explanation:

Explanation: <https://stackoverflow.com/questions/3164280/google-app-engine-cache-list-in-session-variable?rq=1>

### NEW QUESTION # 18

Your company has a networking team and a development team. The development team runs applications on Compute Engine instances that contain sensitive data. The development team requires administrative permissions for Compute Engine. Your company requires all network resources to be managed by the networking team. The development team does not want the networking team to have access to the sensitive data on the instances. What should you do?

- A. 1. Create a project with a standalone VPC and assign the Network Admin role to the networking team.  
2. Create a second project with a standalone VPC and assign the Compute Admin role to the development team.  
3. Use VPC Peering to join the two VPCs.
- B. 1. Create a project with a standalone Virtual Private Cloud (VPC), assign the Network Admin role to the networking team, and assign the Compute Admin role to the development team.
- C. 1. Create a project with a standalone VPC and assign the Network Admin role to the networking team.  
2. Create a second project with a standalone VPC and assign the Compute Admin role to the development team.  
3. Use Cloud VPN to join the two VPCs.
- **D. 1. Create a project with a Shared VPC and assign the Network Admin role to the networking team.  
2. Create a second project without a VPC, configure it as a Shared VPC service project, and assign the Compute Admin role to the development team.**

**Answer: D**

Explanation:

In this scenario, a large organization has a central team that manages security and networking controls for the entire organization. Developers do not have permissions to make changes to any network or security settings defined by the security and networking team but they are granted permission to create resources such as virtual machines in shared subnets. To facilitate this the organization makes use of a shared VPC (Virtual Private Cloud). A shared VPC allows creation of a VPC network of RFC 1918 IP spaces that associated projects (service projects) can then use. Developers using the associated projects can create VM instances in the shared VPC network spaces. The organization's network and security admins can create subnets, VPNs, and firewall rules usable by all the projects in the VPC network.
