If you buy our Plat-Con-201 learning guide, you will find that the exam is just a piece of cake in front of you.

Salesforce Certified Omnistudio Consultant Sample Questions (Q136-Q141):

NEW QUESTION # 136

In which two cases should an integration procedure be used as a data source for FlexCards and OmniScripts, Choose 2 answers

- A. To separate the user interface from changes in the data sources
- B. To minimize the number of elements to be configured

- C. To achieve elastic scaling
- D. To retrieve multiple data sources in a single response

Answer: A,D

Explanation:

The two cases where an integration procedure should be used as a data source for FlexCards and OmniScripts are: To retrieve multiple data sources in a single response and To separate the user interface from changes in the data sources. An integration procedure is a tool that can execute multiple DataRaptor actions, such as Extract, Transform, and Load, and also invoke REST or SOAP services. The consultant can use an integration procedure as a data source for FlexCards and OmniScripts when they need to retrieve data from different sources, such as Salesforce objects or external systems, and store it in a JSON object for display. This way, the integration procedure can provide multiple data sources in a single response, without requiring multiple elements or actions in the FlexCard or OmniScript. The consultant can also use an integration procedure as a data source for FlexCards and OmniScripts when they want to separate the user interface from changes in the data sources. This way, the integration procedure can handle any changes in the data sources without affecting the FlexCard or OmniScript design or configuration.

NEW QUESTION # 137

A consultant is working with a client who wants to display specific account information on a Flexcard.

The client wants to include account status, priority level, creation date, and company logo. They also want to include actions such as closing a case, opening a new case, or creating a task.

What is the best approach for the consultant to meet the client's requirements?

- A. Use the Flexcard Designer to create a Flexcard, adding the necessary fields and actions.
- B. Use Integration Procedures to integrate the necessary data
- C. Use Omniscripts to ,, script that display .. required information
- D. Use Data Mappers to transfer and transform the necessary data.

Answer: A

Explanation:

* FlexCards (B) - FlexCards are the best choice because they are designed to display account-related information such as status, priority level, creation date, and company logo while also allowing the inclusion of actions (e.g., closing a case, opening a new case, creating a task).

* FlexCards provide a user-friendly UI with clickable actions that can trigger OmniScripts or Integration Procedures to process user interactions.

* A. Use OmniScripts - OmniScripts are for step-by-step guided interactions but are not primarily used for displaying static account information.

* C. Use Integration Procedures - Integration Procedures fetch and transform data but do not provide a user interface. They can be used within FlexCards but are not the solution on their own.

* D. Use Data Mappers - Salesforce does not have a native "Data Mappers" tool; data transformation is handled by DataRaptors or Integration Procedures.

Comprehensive and Detailed In-Depth Explanation: Why not the other options?? Salesforce OmniStudio Reference:

* FlexCards Overview

* Configuring Actions in FlexCards

NEW QUESTION # 138

A company needs to create multiple guided processes on their public website. The processes need to be styled using the corporate branding kit. The corporate branding kit includes guidance on colors, fonts, and icons. In addition, the website that the process will be deployed to has a style guide that dictates the format for radio buttons, slide bars, and other user interface elements. The company wants both the corporate branding kit and the website's style guide to be globally implemented in these new processes.

Which three OmniStudio features and tools should the consultant recommend to meet these requirements?

Choose 3 answers

- A. OmniScript
- B. FlexCards
- C. OmniOut
- D. Newport Design System
- E. Custom Styles

Answer: A,D,E

Explanation:

The three OmniStudio features and tools that the consultant should recommend to meet these requirements are: OmniScript, Custom Styles, and Newport Design System. An OmniScript is a tool that can design customer interactions using elements and actions. The consultant can use OmniScripts to create the guided processes for the public website. A Custom Style is a feature that allows applying custom CSS properties to an OmniScript or a FlexCard element. The consultant can use Custom Styles to style the OmniScripts using the corporate branding kit, such as colors, fonts, and icons. A Newport Design System is a tool that provides a set of predefined styles and components for building user interfaces. The consultant can use Newport Design System to style the user interface elements in the OmniScripts, such as radio buttons, slide bars, etc., according to the website's style guide

NEW QUESTION # 139

A business has a requirement to display cases in a console for service agents. Cases can have a variety of statuses, including Active, Closed, or Escalated. When a case is Closed, agents need to be able to reopen the case. When the case is Active or Escalated, agents should not have the option to reopen the case.

Which FlexCard functionality can be used to meet this requirement?

- A. State
- B. Styling
- **C. Conditional View**
- D. Flyouts

Answer: C

Explanation:

The FlexCard functionality that can be used to meet this requirement is Conditional View. A Conditional View is a property that determines whether a FlexCard element, such as a field or an action, is visible or hidden based on certain conditions. The consultant can use a Conditional View to show or hide the reopen case action based on the status of the case

NEW QUESTION # 140

A business implements several OmniScripts and requests a design review to identify possible improvements.

During the review, the consultant notices that each OmniScript needs to update address data, but each OmniScript collects the information differently using different labels and input elements.

What can the consultant recommend to improve these OmniScripts?

- **A. Create a reusable OmniScript to update address information.**
- B. Use a DataRaptor Transform to standardize the data format.
- C. Add an address typeahead element to all the OmniScripts.
- D. Create new versions of the OmniScripts to collect the address information.

Answer: A

Explanation:

The consultant can recommend creating a reusable OmniScript to update address information. A reusable OmniScript is an OmniScript that can be embedded in another OmniScript as a sub-process. This way, the consultant can create one OmniScript that collects the address information in a consistent way using the same labels and input elements, and then use it in multiple OmniScripts that need to update address information.

This will improve the design and maintenance of the OmniScripts.

NEW QUESTION # 141

.....

Our company is a professional certification exam materials provider, we have occupied in this field for more than ten years, and therefore we have rich experience. Plat-Con-201 exam braindumps are high quality, because we have a professional team to collect the first-hand information for the exam, we can ensure that you can get the latest information for the exam. In addition, our company is strict with the quality and answers for Plat-Con-201 Exam Materials, and therefore you can use them at ease.
