

Plat-Dev-301 Practice Test Engine | New Plat-Dev-301 Test Experience

P.S. Free & New Plat-Dev-301 dumps are available on Google Drive shared by VCE4Dumps: <https://drive.google.com/open?id=1FIUJEIuJU9bsOMky6QYJiGUNmldVBT3>

When you decide to pass the Salesforce Plat-Dev-301 exam and get relate certification, you must want to find a reliable exam tool to prepare for exam. That is the reason why I want to recommend our Salesforce Certified Platform Developer II - Multiple Choice Plat-Dev-301 Prep Guide to you, because we believe this is what you have been looking for.

Salesforce Plat-Dev-301 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Logic, Process Automation, and Integration	27%	- Complex business logic and automation design - Asynchronous Apex: future, queueable, batch, scheduled - REST/SOAP API, Platform Events, and external integrations - Advanced Apex programming and transaction management
Topic 2: Performance and Data Management	18%	- Data modeling and complex data operations - Governor limits optimization and best practices - Optimize queries and handle large data volumes
Topic 3: Advanced Developer Fundamentals	15%	- Apply security best practices in development - Work with localization, multi-currency, and global features - Design and maintain scalable, reusable code
Topic 4: User Interface Development	20%	- Implement advanced Visualforce functionality - Optimize UI performance and usability - Build complex Lightning Web Components and Aura Components
Topic 5: Testing, Debugging, and Deployment	20%	- Deployment strategies, CI/CD, and change management - Advanced testing strategies and test frameworks - Debugging and error handling across layers

Free PDF Salesforce - Unparalleled Plat-Dev-301 Practice Test Engine

In real life, every great career must have the confidence to take the first step. When you suspect your level of knowledge, and cramming before the exam, do you think of how to pass the Salesforce Plat-Dev-301 exam with confidence? Do not worry, VCE4Dumps is the only provider of training materials that can help you to pass the exam. Our training materials, including questions and answers, the pass rate can reach 100%. With VCE4Dumps Salesforce Plat-Dev-301 Exam Training materials, you can begin your first step forward. When you get the certification of Salesforce Plat-Dev-301 exam, the glorious period of your career will start.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q78-Q83):

NEW QUESTION # 78

Universal Containers uses Big Objects to store almost a billion customer transactions called Customer_Transaction__b.

These are the fields on Customer_Transaction__b:

Account__c -

Program__c -

Points_Earned__c -

Location__c -

Transaction_Date__c -

The following fields have been identified as Index Fields for the Customer_Transaction__b object: Account__c, Program__c, and Transaction_Date__c.

Which SOQL query is valid on the Customer_Transaction__b Big Object?

- A. SELECT Account__c, Program__c, Transaction_Date__c FROM Customer_Transaction__b WHERE Account__c = '001R000000302D3' AND Program__c EXCLUDES ('Shoppers', 'Womens') AND Transaction_Date__c=2019-05-31T00:00Z
- B. SELECT Account__c, Program__c, Transaction_Date__c FROM Customer_Transaction__b WHERE Account__c = '001R000000302D3' AND Program__c INCLUDES ('Shoppers', 'Womens') AND Transaction_Date__c=2019-05-31T00:00Z
- C. SELECT Account__c, Program__c, Transaction_Date__c FROM Customer_Transaction__b WHERE Account__c = '001R000000302D3' AND Program__c LIKE 'Shop%' AND Transaction_Date__c=2019-05-31T00:00Z
- D. SELECT Account__c, Program__c, Transaction_Date__c FROM Customer_Transaction__b WHERE Account__c = '001R000000302D3' AND Program__c='Shoppers' AND Transaction_Date__c=2019-05-31T00:00Z

Answer: D

Explanation:

The valid SOQL query on a Big Object must match the indexed fields exactly. Since Account__c, Program__c, and Transaction_Date__c are the indexed fields, the SOQL query must specify those fields exactly in the WHERE clause, including exact match conditions (no LIKE or INCLUDES).

NEW QUESTION # 79

As part of their quoting and ordering process, a company needs to send POFs to their document storage system's REST endpoint that supports OAuth 2.0. Each Salesforce user must be individually authenticated with the document storage system to send the PDF.

What is the optimal way for a developer to implement the authentication to the REST endpoint?

- A. Hierarchy Custom Setting with 2 password custom field
- B. Named Credential with an OAuth Authentication Provider
- C. Hierarchy Custom Setting with an OAuth token custom field
- D. Named Credential with Password Authentication

Answer: B

Explanation:

Named Credentials with OAuth handle secure API calls. Individual authentication for each user with OAuth 2.0 is managed through Named Credentials.

NEW QUESTION # 80

Which three Visualforce components can be used to initiate Ajax behavior to perform partial page updates?

Choose 3 answers

- A. `<apex:commandButton>`
- B. `<apex:actionsStatus>`
- C. `<Apex:form>`
- D. `<apex:actionSupport>`
- E. `<apex:commandLink>`

Answer: A,D,E

Explanation:

`<apex:commandLink>` and `<apex:commandButton>` components can cause the form data to be sent to the server and can be configured to refresh specific parts of the page.

`<apex:actionSupport>` adds AJAX support to other components and can trigger partial page updates based on events such as onclick, onchange, etc.

Visualforce Guide

NEW QUESTION # 81

Universal Containers wants to notify an external system, in the event that an unhandled exception occurs, by publishing a custom event using Apex.

What is the appropriate publish/subscribe logic to meet this requirement?

- A. Publish the error event using the `EventBus.publish()` method and have the external system subscribe to the event using CometD.
- B. Have the external system subscribe to the event channel. No publishing is necessary.
- C. Publish the error event using the `addError()` method and write a trigger to subscribe to the event and notify the external system.
- D. Publish the error event using the `addError()` method and have the external system subscribe to the event using Comet

Answer: A

Explanation:

When an unhandled exception occurs, publishing a custom platform event using `EventBus.publish()` method is the appropriate way. The external system can then subscribe to this event using technologies like CometD to receive notifications. Publish and Subscribe to Platform Events

NEW QUESTION # 82

A developer is writing a Visualforce page that queries accounts in the system and presents a data table with the results. The users want to be able to filter the results based on up to five fields. However, the users want to pick the five fields to use as filter fields when they run the page.

Which Apex code feature is required to facilitate this solution?

- A. dynamic SOQL
- B. Metadata API
- C. Streaming API
- D. variable binding

Answer: A

Explanation:

The requirement described in the question calls for a flexible way to query records based on user-selected fields. Dynamic SOQL is the perfect tool for this job as it allows the construction of a SOQL string at runtime, which can include any number of fields and filter conditions that are determined at the time the user interacts with the page. This enables the creation of a highly customizable query interface. A, B, and C are not suitable for this requirement as they serve different purposes: A (Streaming API) is for receiving real-time streams of data changes, B (Metadata API) is for managing the metadata of your Salesforce org, and C (variable binding) is used in Visualforce to bind data between the page and the controller but does not provide dynamic query capabilities.
