Get Exam Ready with Real Palo Alto Networks PCNSE Questions Natural

If you are still headache about how to choose PCNSE real questions, now stop! Do not be entangled with this thing. We should be the best wise select for every aspiring candidate who is ready for PCNSE exams. We design three formats of our high-quality PCNSE exam questions which satisfy different kinds of candidates' demands: PDF version, Soft Test Engine, Online Test Engine. These 3 formats of our PCNSE training guide contain same questions and answers. Candidates can choose any version of our PCNSE learning prep based on their study habits.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

A company has recently migrated their branch office's PA-220S to a centralized Panorama. This Panorama manages a number of PA-7000 Series and PA-5200 Series devices. All device group and template configuration is managed solely within Panorama. They notice that commit times have drastically increased for the PA-220S after the migration. What can they do to reduce commit times?

- A. Perform a device group push using the "merge with device candidate config" option
- B. Use "export or push device config bundle" to ensure that the firewall is integrated with the Panorama config.
- C. Disable "Share Unused Address and Service Objects with Devices" in Panorama Settings.
- D. Update the apps and threat version using device-deployment

Answer: C

Explanation:

Explanation

According to the Palo Alto Networks documentation¹, disabling "Share Unused Address and Service Objects with Devices" in Panorama Settings is a possible solution to reduce commit times for firewalls managed by Panorama. This option prevents Panorama from pushing address and service objects that are not used in any policy rules to the firewalls, which can reduce the size of the configuration and improve the commit performance. Therefore, the correct answer is A.

The other options are not relevant or effective for reducing commit times:

Update the apps and threat version using device-deployment: This option would not help because it is not related to the commit process. Updating the apps and threat version using device-deployment is a feature that allows Panorama to distribute content updates to firewalls without requiring a commit².

Perform a device group push using the "merge with device candidate config" option: This option would not help because it is not related to the commit performance. Performing a device group push using the "merge with device candidate config" option is a feature that allows Panorama to merge the local changes on a firewall with the Panorama configuration without overwriting them³.

Use "export or push device config bundle" to ensure that the firewall is integrated with the Panorama config: This option would not help because it is not related to the commit performance. Using "export or push device config bundle" is a feature that allows Panorama to export or push a complete configuration bundle to a firewall, which can be useful for troubleshooting or migrating configurations⁴.

NEW QUESTION # 53

An engineer has discovered that certain real-time traffic is being treated as best effort due to it exceeding defined bandwidth Which QoS setting should the engineer adjust?

- A. QoS interface: Egress Max
- **B. QoS profile: Egress Guaranteed**
- C. QoS profile: Egress Max
- D. QoS interface: Egress Guaranteed

Answer: B

Explanation:

Explanation

When the egress guaranteed bandwidth is exceeded, the firewall passes traffic on a best-effort basis.

NEW QUESTION # 54

What are three tasks that cannot be configured from Panorama by using a template stack? (Choose three.)

- A. Configure a device block list
- **B. Enable operational modes such as normal mode, multi-vsys mode, or FIPS-CC mode**
- **C. Add administrator accounts**
- **D. Change the firewall management IP address**
- E. Rename a vsys on a multi-vsyes firewall

Answer: B,C,D

Explanation:

Explanation

A: Change the firewall management IP address C. Add administrator accounts E. Enable operational modes such as normal mode, multi-vsyes mode, or FIPS-CC mode Short Explanation of Correct Answer Only: These tasks cannot be configured from Panorama by using a template stack because they are device-specific settings that must be configured locally on each firewall¹. A template stack can only configure settings that are common to multiple firewalls². References: 1:

NEW QUESTION # 55

An administrator needs to gather information about the CPU utilization on both the management plane and the data plane. Where does the administrator view the desired data?

- A. Application Command and Control Center
- B. Monitor > Utilization
- C. Resources Widget on the Dashboard
- D. Support > Resources

Answer: C

NEW QUESTION # 56

An administrator would like to determine which action the firewall will take for a specific CVE. Given the screenshot below, where should the administrator navigate to view this information?

- A. Exceptions tab
- B. The profile rule action
- C. CVE column
- D. The profile rule threat name

Answer: A

Explanation:

The Exceptions settings allows you to change the response to a specific signature. For example, you can block all packets that match a signature, except for the selected one, which generates an alert. The Exception tab supports filtering functions.

If you not believed, then login the firewall go to Vulnerability > Exceptions and select "Show all signatures".

From there you will see all threat information including specific actions.
