

100% Pass GARP - SCR—Newest New Dumps Questions

GARP SCR Exam 2023 | Questions and 100% Correct Answers

1. About what percentage of heat trapped by greenhouse gasses goes into heating the oceans?	About 93%
2. What are the 2 key contributing factors to the rise in sea level?	The melting of ground ice & water expanding as it heats
3. T/F: The warming over the past century is around 16 times faster than the average rate of warming coming out of the last ice age.	True
4. How can scientists use tree rings to extract climate information?	Because tree growth follows an annual cycle that is imprinted in the rings in their trunks, scientists can measure the size of rings & estimate the local climate around the tree for each year it was alive.
5. What is the most important rule of the Earth's climate?	Energy Balance—The Energy reaching earth from the sun must be equal to the energy the earth radiates back to space.
6. What is meant by greenhouse effect?	Greenhouse gases are a part of the atmosphere that absorb infrared radiation. These gases reduce the amount of power the Earth radiates to space, therefore a planet with more greenhouse gases in the atmosphere must be warmer than one without.
7. What Swedish scientist first recognized the possibility that as the mass of greenhouse gases in our atmosphere increases, the atmosphere traps	Svante Arrhenius in 1896. British engineer Guy Callendar provided more supporting evidence for this possibility in 1938.

Their abilities are unquestionable, besides, SCR practice materials are priced reasonably with three kinds. We also have free demo offering the latest catalogue and brief contents for your information, if you do not have thorough understanding of our materials. Many exam candidates build long-term relation with our company on the basis of our high quality SCR practice materials. So you cannot miss the opportunities this time. So as the most important and indispensable SCR practice materials in this line, we have

confidence in the quality of our SCR practice materials, and offer all after-sales services for your consideration and acceptance.

GARP SCR Exam covers a range of topics related to sustainability and climate risk. Some of the key topics that are covered in SCR exam include climate science, sustainability, risk management, and investment strategies. The objective of the exam is to provide professionals with the knowledge and skills they need to identify and manage climate risk in their organizations.

GARP Sustainability and Climate Risk Sample Questions (Q72-Q77):

NEW QUESTION # 72

The CRO for a large agriculture company reviews reference scenarios as part of an annual climate scenario analysis exercise. The CRO creates a transition risk matrix that compares four different scenarios - W, X, Y, Z. Scenarios are compared according to scale of emissions cuts and pace of emission cuts. Scale is depicted as business as usual (BAU) to net-zero. Pace is depicted as orderly to disorderly. The CRO uses this matrix to explain transition risk to the company's executive members:

How should the CRO rank the reference scenarios from lowest level of transition risk to highest level of transition risk?

- A. Lowest = Y; Highest = X
- B. Lowest = Z; Highest = W
- C. Lowest = X; Highest = Y
- D. Lowest = W; Highest = Z

Answer: A

NEW QUESTION # 73

A financial services firm in South America evaluates climate-related financial risks and opportunities to align with ISSB reporting standards. The firm initiates a scenario analysis to determine potential impacts on its investment portfolio. To enable a thorough assessment, which climate scenario input parameter should the firm prioritize in the analysis?

- A. Employee productivity
- B. Net earnings
- C. Carbon price
- D. Asset allocation

Answer: C

NEW QUESTION # 74

A private equity fund invests in infrastructure development and agro-industrial projects. The fund hires a team of climate risk consultants to advise on investment structure and the potential climate risks to the fund. The team recommends data types and analytical tools to evaluate physical and transition risk impact at the company level.

How should the company evaluate company-level physical risk?

- A. Develop company scores that combine proprietary methodologies with downscaled climate model data.
- B. Categorize carbon emissions as Scope 1, 2, or 3, and disclose corporate carbon footprints to data providers.
- C. Measure the degree of corporate alignment to opt-in initiatives like the Transition Pathway Initiative's Science-Based Targets.
- D. Calculate CVaR to offer quantitative estimates of expected financial losses or gains from climate risks and opportunities.

Answer: A

NEW QUESTION # 75

The sustainability team at a global airline company enhances long-term operational efficiency and resilience.

The team reviews potential strategies using scenario analysis to assess climate transition risks and optimize logistics. How can the airline company use scenario analysis to assess transition risk?

- A. Integrate detailed data on regional hazards, exposure, and vulnerability.
- B. Use historic weather data to improve route resilience.
- C. Apply a shadow carbon tax in cost assessment models.

- D. Incorporate physical risk impacts from extreme weather events into operational models.

Answer: C

NEW QUESTION # 76

A telecommunications corporation issues a green bond to finance energy efficiency improvements for the company's office space worldwide. The company's risk management department commissions an independent advisory assessment of the bond to check bond alignment with components of the Green Bond Principles.

What action does the corporation take to align the bond with the "process for project evaluation and selection" component of the Green Bond Principles?

- A. Establish an internal process for tracking and allocating funds from the proceeds of the bond.
- B. Make available an annual summary on the use of proceeds, stating the project's progress.
- C. Submit legal documentation providing clear quantifiable environmental benefits of the project.
- **D. Create an identification process for environmental and social risks related to energy efficiency improvements.**

Answer: D
