

AI-102 Valid Test Cost - AI-102 Free Vce Dumps

BONUS!!! Download part of TestKingIT AI-102 dumps for free: <https://drive.google.com/open?id=1ryEXkS5BvoRHfTAhHYMN2RxHnFCIuc>

In order to pass the Microsoft AI-102 Exam, selecting the appropriate training tools is very necessary. And the study materials of Microsoft AI-102 exam is a very important part. TestKingIT can provide valid materials to pass the Microsoft AI-102 exam. The IT experts in TestKingIT are all have strength aned experience. Their research materials are very similar with the real exam questions. TestKingIT is a site that provide the exam materials to the people who want to take the exam. and we can help the candidates to pass the exam effectively.

To prepare for the Microsoft AI-102 certification exam, candidates should have a good understanding of AI concepts and experience working with Microsoft Azure. They should also be familiar with the Azure AI services and know how to use them to build AI solutions. Microsoft offers a variety of training resources, including self-paced online courses, classroom training, and hands-on labs, to help candidates prepare for the exam. Additionally, candidates can take practice exams and participate in study groups to gain a better understanding of the exam format and content.

The AI-102 Exam is intended for professionals who are responsible for designing and implementing AI solutions that use Azure services. AI-102 exam is ideal for developers, architects, and data scientists who are interested in expanding their AI skills and knowledge. AI-102 exam covers a variety of topics, including designing AI solutions, implementing AI workflows, creating and deploying machine learning models, and integrating AI solutions with other Azure services.

100% Pass Quiz 2026 Microsoft AI-102: High Hit-Rate Designing and Implementing a Microsoft Azure AI Solution Valid Test Cost

Everyone wants to have a good job and decent income. But if they don't have excellent abilities and good major knowledge they are hard to find a decent job. Passing the test AI-102 certification can make you realize your dream and find a satisfied job. Our study materials are a good tool that can help you pass the exam easily. You needn't spend too much time to learn it. Our AI-102 Exam Guide is of high quality and if you use our product the possibility for you to pass the exam is very high.

Microsoft AI-102 (Designing and Implementing a Microsoft Azure AI Solution) Certification Exam is designed for professionals who want to demonstrate their expertise in designing and implementing AI solutions using Microsoft Azure. AI-102 exam is targeted towards developers, data scientists, and AI engineers who are responsible for building AI applications that leverage Azure AI services. Passing AI-102 Exam validates your skills and knowledge to design, implement, and monitor AI solutions that meet business needs.

Microsoft Designing and Implementing a Microsoft Azure AI Solution Sample Questions (Q109-Q114):

NEW QUESTION # 109

You are developing an application that includes language translation.

The application will translate text retrieved by using a function named `get_text_to_be_translated`. The text can be in one of many languages. The content of the text must remain within the Americas Azure geography.

You need to develop code to translate the text to a single language.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
...
api_key = "FF956C68B83B21838691ABD200A4C606"
text = get_text_to_be_translated()
headers = {
    'Content-Type': 'application/json',
    'Ocp-Apim-Subscription-Key': api_key
}
body = {
    'Text': text
}
conn = httpWebRequest
conn.request("POST",
response = conn.getResponse()
    conn.request("POST",
response = conn.getResponse()
response_data = response.r
...
```

Microsoft

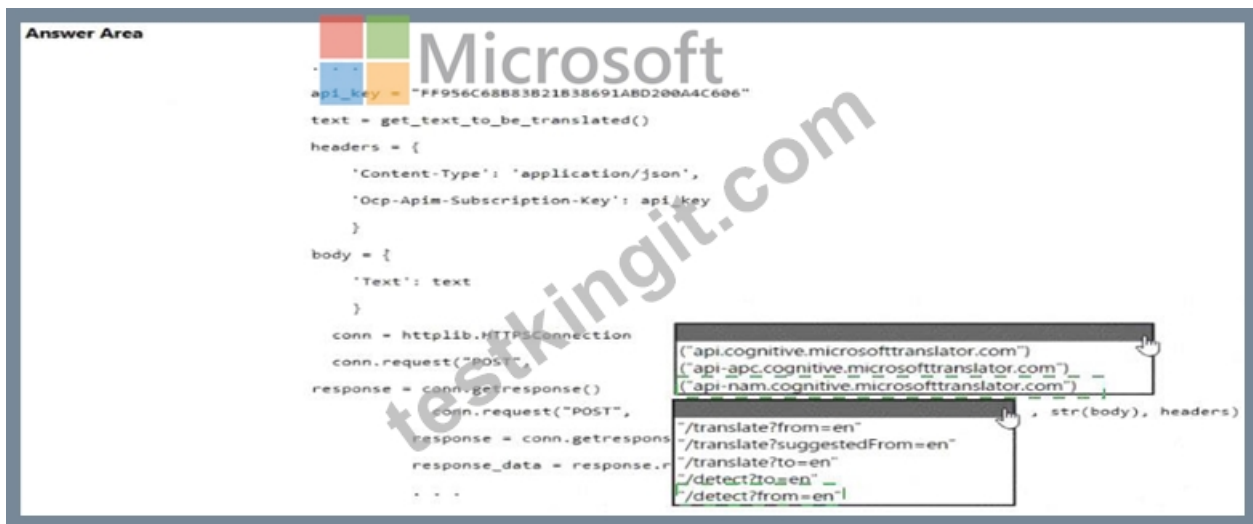

testkingit.com

Options:

- ("/api.cognitive.microsofttranslator.com")
- ("/api-apc.cognitive.microsofttranslator.com")
- ("/api-nam.cognitive.microsofttranslator.com")
- ("/translate?from=en")
- ("/translate?suggestedFrom=en")
- ("/translate?to=en")
- ("/detect?to=en")
- ("/detect?from=en")

Answer:

Explanation:

Explanation:

The constraint states that the content of the text must remain within the Americas Azure geography.

* "api.cognitive.microsofttranslator.com": This is the global endpoint, which doesn't guarantee data residency in a specific geography.

* "api-apc.cognitive.microsofttranslator.com": This endpoint refers to the Asia Pacific geography.

* "api-nam.cognitive.microsofttranslator.com": This endpoint refers to the North and South America (NAM) geography.

Therefore, to meet the data residency requirement for the Americas, you must select "api-nam.cognitive.microsofttranslator.com".

The requirement is to translate the text to a single language. The input text can be in "one of many languages," meaning the source language isn't fixed and should be detected automatically. The language to translate to is implied to be English (en) based on the options available and common translation scenarios.

* "/translate?from=en": This is incorrect because it specifies the source language as English, which contradicts the "text can be in one of many languages" requirement (implying automatic source language detection).

* "/translate?suggestedFrom=en": This is not the standard way to initiate a translation request and seems to suggest a source language, which is unnecessary if auto-detection is desired/possible.

* "/translate?to=en": This is the correct and standard way to request a translation where the source language is automatically detected, and the target language is English (en). This fulfills the translation requirement.

* "/detect?to=en" / "/detect?from=en": These endpoints are used for language detection and not for the translation itself. The prompt explicitly asks to develop code to translate the text.

NEW QUESTION # 110

You have data saved in the following format.

Which format was used?

- A. CSV
- B. JSON
- C. HTML
- D. YAML

Answer: A

NEW QUESTION # 111

You are building an app that will scan confidential documents and use the Language service to analyze the contents.

You provision an Azure Cognitive Services resource.

You need to ensure that the app can make requests to the Language service endpoint. The solution must ensure that confidential documents remain on-premises.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Pull an image from Docker Hub.
- Provision an on-premises Kubernetes cluster that has internet connectivity.
- Provision an Azure Kubernetes Service (AKS) resource.
- Run the container and specify an App ID and Client Secret.
- Provision an on-premises Kubernetes cluster that is isolated from the internet.
- Pull an image from the Microsoft Container Registry (MCR).
- Run the container and specify an API key and the Endpoint URL of the Cognitive Services resource.

Answer Area

Microsoft

Answer:

Explanation:

Answer Area

- Provision an on-premises Kubernetes...
- Pull an image from the Microsoft Container Registry...
- Run the container and specify an API key...

Microsoft

- 1 - Provision an on-premises Kubernetes...
- 2 - Pull an image from the Microsoft Container Registry...
- 3 - Run the container and specify an API key...

NEW QUESTION # 112

You are developing the smart e-commerce project.

You need to design the skillset to include the contents of PDFs in searches.

How should you complete the skillset design diagram? To answer, drag the appropriate services to the correct stages. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Services

- Azure Blob storage
- Custom Vision API
- Azure Files
- Language Understanding API
- Translator API
- Computer Vision API
- Azure Cosmos DB

Answer Area

Source **Cracking** **Preparation** **Destination**

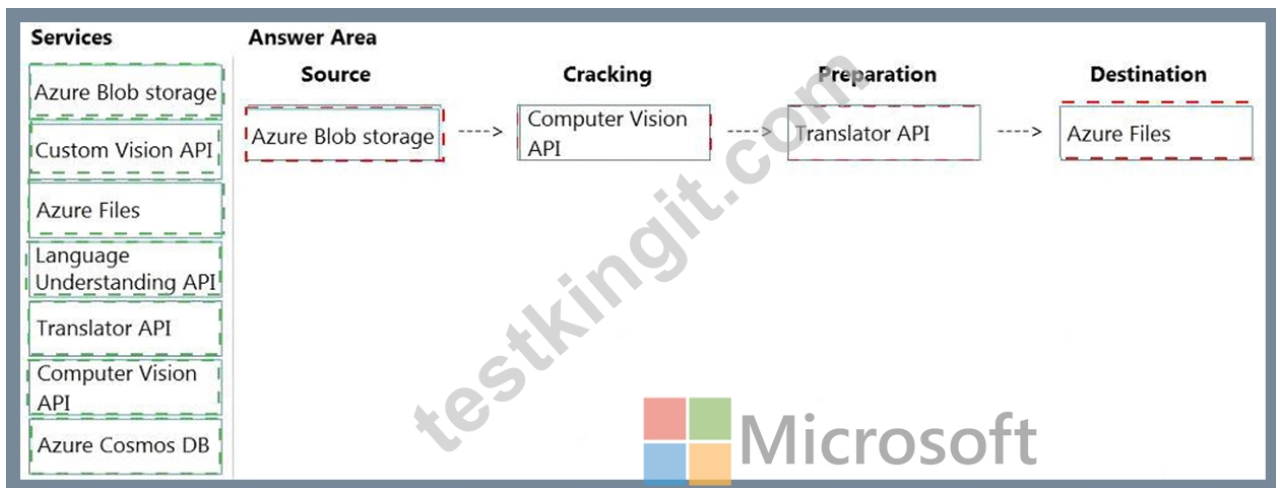

----->----->----->----->

Microsoft

testkingit.com

Answer:

Explanation:

Explanation:

Box 1: Azure Blob storage

At the start of the pipeline, you have unstructured text or non-text content (such as images, scanned documents, or JPEG files). Data must exist in an Azure data storage service that can be accessed by an indexer.

Box 2: Computer Vision API

Scenario: Provide users with the ability to search insight gained from the images, manuals, and videos associated with the products. The Computer Vision Read API is Azure's latest OCR technology (learn what's new) that extracts printed text (in several languages), handwritten text (English only), digits, and currency symbols from images and multi- page PDF documents.

Box 3: Translator API

Scenario: Product descriptions, transcripts, and all text must be available in English, Spanish, and Portuguese.

Box 4: Azure Files

Scenario: Store all raw insight data that was generated, so the data can be processed later.

NEW QUESTION # 113

You have an Azure subscription that contains an Azure AI Language resource named Resource1.

You run the following cURL command, and then play the Output.mp3 file.

```
curl --location --request POST "https://eastus.tts.speech.microsoft.com/cognitiveservices/v1" ^
--header "Ocp-Apim-Subscription-Key: 3795c4011f714f5aa66469e573109e4f" ^
--header "Content-Type: application/ssml+xml" ^
--header "X-Microsoft-OutputFormat: audio-16khz-128kbitrate-mono-mp3" ^
--header "User-Agent: curl" ^
--data-raw "<speak version='1.0' xml:lang='en-US'>
<voice xml:gender='Female' name='en-US-JennyNeural'>
  Welcome to the Azure Text-to-Speech demonstration.
</voice>
<voice xml:gender='Male' name='en-GB-RyanNeural'>
  This service allows you to convert text into natural-sounding speech.
</voice>
<voice xml:gender='Male' name='en-US-ChristopherNeural'>
  <mstts:express-as style='advertisement_upbeat' styledegree='2'>
    It's easy to integrate, customizable, and supports multiple languages and voices.
  </mstts:express-as>
</voice>
</speak>" --output output.mp3
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth point.

Answer Area

Statements

You hear three sentences in different voices.

You hear three sentences in different accents.

You hear three sentences expressed in a neutral tone.

Yes

No

☐
☐
☐
☐
☐
☐

Answer:

Explanation:

Answer Area

Statements

You hear three sentences in different voices.

You hear three sentences in different accents.

You hear three sentences expressed in a neutral tone.

Yes

No

☒
☐
☒
☐
☐
☒

Explanation:

Answer Area

Statements

You hear three sentences in different voices.

You hear three sentences in different accents.

You hear three sentences expressed in a neutral tone.

Yes

No

☒
☐
☒
☐
☐
☒

The SSML payload contains three <voice> elements with different voice names:

* name="en-US-JennyNeural" (US English) - neutral delivery.

* name="en-GB-RyanNeural" (UK English) - neutral delivery.

* name="en-US-ChristopherNeural" (US English) - wrapped in <mstts:express-as style="advertisement_upbeat" styledegree="2">, which applies an upbeat, non-neutral style.

Therefore:

* Different voices # Yes (Jenny, Ryan, Christopher are three distinct voices).

* Different accents # No (voices 1 and 3 are both en-US; only voice 2 is en-GB).

References (Microsoft Azure Speech / Text-to-Speech)

* Neural voice styles and roles (e.g., mstts:express-as with styles such as advertisement_upbeat).
