最新的 SAP Certified Application Specialist E_S4CPE_2405 免費考試真題 (Q46-Q51):

問題 #46

Which tools enable non-developers to create low/no-code extensions? Note: There are 2 correct answers to this question.

- A. SAP Build
- B. SAP Cloud SDK
- C. SAP Fiori extensibility apps
- D. SAP Business Application Studio

答案: A,C

問題 #47

You are preparing for an SAP S/4HANA Cloud Private Edition implementation project. What do you find in the Roadmap Viewer?

Note: There are 2 correct answers to this question.

- A. Solution process setup instructions
- **B. Business process flows**
- C. Clean Core quality gates
- **D. Tasks and deliverables to complete each phase**

答案: B,D

解題說明:

The Roadmap Viewer is an SAP tool that provides detailed guidance for implementing SAP solutions, including SAP S/4HANA Cloud Private Edition, based on the SAP Activate Methodology. It supports project teams by offering phase-specific content. Let's evaluate the options:

* A. Business process flows: This is correct. The Roadmap Viewer includes business process flows that illustrate how standard processes (e.g., order-to-cash, procure-to-pay) are executed in SAP S/4HANA.

These flows help teams understand and align their implementation with SAP best practices, a key feature for Private Edition projects.

* B. Solution process setup instructions: This is incorrect. While the Roadmap Viewer provides high-level guidance, it does not include detailed, step-by-step setup instructions for configuring specific processes in the system. Such instructions are typically found in SAP Help Portal or configuration guides, not the Roadmap Viewer.

* C. Tasks and deliverables to complete each phase: This is also correct. The Roadmap Viewer outlines tasks, activities, and deliverables for each phase of the SAP Activate Methodology (Discover, Prepare, Explore, Realize, Deploy, Run). For SAP S/4HANA Cloud Private Edition, it provides a structured plan to ensure all necessary steps are completed, making it an essential project management resource.

* D. Clean Core quality gates: This is incorrect. The Clean Core principle (keeping the core SAP system standard and extensible) is part of SAP's strategy, and quality gates may be referenced in broader RISE with SAP documentation. However, the Roadmap Viewer does not specifically focus on Clean Core quality gates; it provides general implementation guidance rather than governance checkpoints.

In summary, the Roadmap Viewer contains A (business process flows) and C (tasks and deliverables to complete each phase) for an SAP S/4HANA Cloud Private Edition implementation.

問題 #48

Which layer of SAP S/4HANA provides a universal language to read and process data across different applications?

- A. SAP Fiori
- **B. Core data services**
- C. SAP Business Suite
- D. SAP HANA

答案: B

解題說明:

In SAP S/4HANA, Core Data Services (CDS) provide a universal language to define and consume data models across different applications. CDS enables the creation of semantically rich data models that can be consistently used in various scenarios, ensuring uniform data processing and retrieval.

Option A: SAP HANA

This option is incorrect. SAP HANA is the underlying in-memory database platform that stores and processes data but does not provide the universal modeling language.

Option B: SAP Business Suite

This option is incorrect. SAP Business Suite is a set of integrated business applications but does not offer a universal language for data modeling.

Option C: Core Data Services

This option is correct. CDS defines data models that can be used across various applications, providing a consistent and unified approach to data handling.

Option D: SAP Fiori

This option is incorrect. SAP Fiori is a user experience design

SAP S/4HANA's architecture includes layers that enable data processing and application functionality. The question asks for the layer providing a universal language to read and process data across applications. Let's analyze the options:

A: SAP HANA: This is the in-memory database layer powering SAP S/4HANA. While it provides the technical foundation for high-speed data processing, it does not offer a universal language for applications-it's a platform, not a data abstraction layer.

B: SAP Business Suite: This refers to the legacy ERP suite (e.g., ECC), not a layer of SAP S/4HANA. It is a collection of applications, not a data processing language or layer, making it incorrect.

C: Core Data Services (CDS): This is the correct answer. CDS is a semantic layer in SAP S/4HANA that provides a universal language to define, read, and process data across different applications. Built on the SAP HANA database, CDS uses a SQL-based syntax to create reusable data models (views) that simplify access to data for applications like SAP Fiori, analytics, and extensions. It ensures consistency and efficiency, a key feature of S/4HANA's architecture, including the Private Edition.

D: SAP Fiori: This is the user interface layer of SAP S/4HANA, providing a modern UX via apps. It consumes data but does not define or process it universally across applications, making it incorrect.

In conclusion, Core Data Services (CDS) is the layer in SAP S/4HANA that provides a universal language for data processing. References:

問題 #49

Which solution is designed to help customers understand their environmental, social, and governance (ESG) data?

- A. SAP Sustainability Control Tower
- B. SAP Green Token
- C. SAP Sustainability Footprint Management
- D. SAP Responsible Design and Production

答案： A

問題 #50

What is the purpose of the Business Driven Configuration Questionnaires (BDCQs)? Note: There are 2 correct answers to this question.

- A. To gather configuration values to be entered in the SAP S/4HANA Cloud Private Edition system
- B. To decide about pace, support level, and update cycles for the system landscape
- C. To facilitate the connection between partner LOB configuration experts and customer LoB experts
- D. To define enablement requirements for end users and business users

答案： A,C
