We recommend you to have a try before buying. What's more, B2C-Commerce-Architect training materials cover most of knowledge points for the exam, and you can master major knowledge points for the exam as well as improve your professional ability in the process of learning. In order to build up your confidence for B2C-Commerce-Architect Exam Braindumps, we are pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you refund.

Salesforce Certified B2C Commerce Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which two activities should an Architect encourage the replication team to follow based on S2C Commerce best practices?
Choose 2 answers

- A. Replicate the latest data to Production during periods of increased site use to ensure freshness.
- **B. Use the undo replication process to roll back to the previous replication if necessary.**
- **C. Use the undo replication process to roll back code replications only, not data replications.**
- D. Wait 15 minutes after the recreation process completes for the cache to clear automatically.

Answer: B,C

Explanation:

* Option A (Use the undo replication process to roll back to the previous replication if necessary):

This best practice ensures that if a replication introduces errors or issues, there is a way to quickly revert to a previous state without impacting the ongoing operations of the commerce site.

* Option C (Use the undo replication process to roll back code replications only, not data replications): Focusing undo operations on code replication rather than data ensures that functional issues caused by code changes can be quickly addressed without affecting the integrity or consistency of the data within the system.

These practices help maintain the stability and reliability of the production environment by providing mechanisms to manage and mitigate risks associated with updates and changes.

NEW QUESTION # 61

A client uses an external marketing tool to manage promotions and coupons for its multiple brands. They currently have only one brand on B2C Commerce and they get Import-ready feeds created by this tool on an SFTP location.

The marketing team completes the data preparation by the end of the work day.

How should the Architect handle this import?

- A. Create a Job and define three custom steps: download the files from SFTP, import promotions, import coupons
- **B. Create a job and define three steps: one custom step to download the files from SFTP, and two standard steps to import the promotion and coupons.**
- C. Create a Job and define three steps: one step uses ExecuteScriptModule to download the files from SFTP, and two standard steps to Import the promotion and coupons.
- D. Create a Job and define three steps: one standard step to download files from sftp and two steps that use Execute Script Module to import the promotion and coupons.

Answer: B

Explanation:

To handle the import of promotion and coupon data from an SFTP location, the best approach is to create a job consisting of three steps as described in option B. The first step involves a custom script to download the files from the SFTP server-this is necessary because file retrieval from external servers typically requires specific connectivity and security configurations that are best handled in a custom-coded step. The subsequent two steps would utilize standard Salesforce B2C Commerce job steps to import the downloaded promotion and coupon data into the platform. This method ensures that the data flow is streamlined, from retrieval through to integration into the Commerce platform.

NEW QUESTION # 62

Your project has 4 storefronts for different branches. Everyday at 4.00 am runs a job to import inventories, master catalog and storefronts for each of those sites. You're in charge of job configuration, given this information what should be the best approach to achieve it?

- A. None of these answers are correct
- B. 2 flows needed. First one to import master catalog with organization scope and in parallel import storefronts with site scope and second flow to import the inventory with organization scope.
- C. First flow with organization scope to import master catalog, another flow with 4 steps to import each storefront catalog with site scope and in parallel inventory import with organization scope.
- D. 3 flows are needed. First master catalog with organization scope. Second flow is to import storefront catalogs with site scope and last to import inventory with organization scope.

Answer: C

NEW QUESTION # 63

During load testing, a third party service is constantly failing to respond in a timely manner on the Product Listing Page. The page is not affected at it is collecting data with the server side call, however the loading time b increasing.

Which two recommendations should the developer take in order to minimize the risk and Improve the loading time?

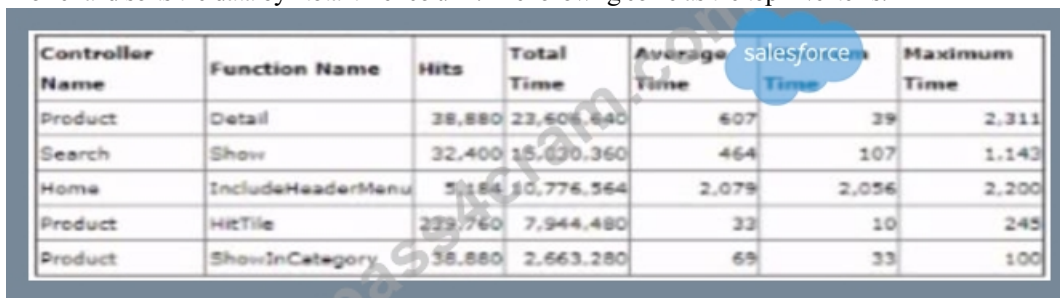

Choose 2 answers

- A. Enable the Circuit Breaker.
- B. Load the data asynchronously after the page is loaded
- C. Remove the service.
- D. Decrease the service timeout.
- E. Ask the third party to improve the reliability of the service.

Answer: A,B

NEW QUESTION # 64

During a load test the storefront shows steady but slow performance on all the paces being tested. The Architect opens Pipeline Profiler and sorts the data by *total time" column. The following come as the top Ave items:

Controller Name	Function Name	Hits	Total Time	Average Time	Maximum Time
Product	Detail	38,880	23,608,840	607	2,311
Search	Show	32,400	15,630,360	464	1,143
Home	IncludeHeaderMenu	5,184	10,776,564	2,079	2,200
Product	HitTile	223,760	7,944,480	33	245
Product	ShowInCategory	38,880	2,663,280	69	100

Which controller should the Architect focus on to further investigate the performance issue?

- A. Search Show as this Is one of the key controllers that the customer uses
- B. Home-IncludeHeaderMenu as It has highest average time.
- C. Product-HitTile asit has the highest hits during the load test.
- D. Product-Detail as It has the highest total time and highest maximum time.

Answer: D

Explanation:

Focusing on the 'Product-Detail' controller is prudent given that it has the highest total time and the highest maximum time (Answer C), suggesting that it significantly contributes to the overall load and potential slowdowns on the site. By analyzing and optimizing this controller, the architect can potentially achieve the most substantial improvement in performance. Efforts might include optimizing database queries, caching frequently requested data, or simplifying complex logic in the Product-Detail page's processing.

NEW QUESTION # 65
