## CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q421-Q426):

### NEW QUESTION # 421

Which of the following is the result of performing a physical-to-virtual migration of desktop workstations?

- A. VPN
- **B. VDI**
- C. SaaS
- D. IaaS

**Answer: B**

Explanation:

VDI, or Virtual Desktop Infrastructure, is the result of performing a physical-to-virtual migration of desktop workstations. VDI is a technology that allows users to access and run desktop operating systems and applications from a centralized server in a data center or a cloud, instead of from a physical machine on their premises. VDI provides users with virtual desktops that are delivered over a network to various devices, such as laptops, tablets, or thin clients<sup>1</sup>. VDI offers several benefits, such as improved security, reduced costs, increased flexibility, and enhanced performance<sup>2</sup>.

SaaS, or Software as a Service, is not the result of performing a physical-to-virtual migration of desktop workstations, but a cloud service model that provides ready-to-use software applications that run on the cloud provider's infrastructure and are accessed via a web browser or an API<sup>3</sup>. SaaS does not involve migrating desktop workstations, but using software applications that are hosted and managed by the cloud provider.

IaaS, or Infrastructure as a Service, is not the result of performing a physical-to-virtual migration of desktop workstations, but a cloud service model that provides access to basic computing resources, such as servers, storage, network, and virtualization, that are hosted on the cloud provider's data centers and are rented on-demand. IaaS does not involve migrating desktop workstations, but renting infrastructure resources that can be used to host various workloads.

VPN, or Virtual Private Network, is not the result of performing a physical-to-virtual migration of desktop workstations, but a technology that creates a secure and encrypted connection between a device and a network over the internet. VPN does not involve migrating desktop workstations, but connecting to a network that can provide access to remote resources or services. Reference: What is VDI? ### NEW QUESTION # 422

Which of the following processes needs to be changed to better handle Change Management in the cloud?

- A. Hardware maintenance
- B. Financial chargeback
- **C. Software distribution**
- D. Security management

**Answer: C**

### NEW QUESTION # 423

Elastic computing is important to businesses as it relates to which of the following cloud characteristics?

- A. Integrity
- B. Security
- **C. Scalability**
- D. Distribution

**Answer: C**

### NEW QUESTION # 424

A company decommissioned its testing environment. Which of the following should the company do FIRST to avoid charges?

- A. Disable alerts and alarms.
- **B. Detach and delete disposable resources.**
- C. Empty the logging directory.
- D. Delete infrastructure as code templates.

**Answer: B**

Explanation:

Disposable resources are cloud resources that are not needed for the long-term operation of an application or service, and can be easily created and deleted on-demand. Examples of disposable resources include temporary storage, spot instances, and disposable virtual machines. Disposable resources can help to reduce costs and improve flexibility, but they also incur charges when they are in use or attached to other resources. Therefore, when a company decommissioned its testing environment, it should detach and delete disposable resources first to avoid charges.

#### NEW QUESTION # 425

A company is moving to the cloud and wants to minimize application downtime. Which of the following would best accomplish this goal?

- A. Compression
- B. Deduplication
- C. Data sovereignty
- **D. High availability**

**Answer: D**

Explanation:

High availability (HA) ensures that a system or application remains operational and accessible, even in the event of failures or disruptions. By leveraging high availability architectures, such as redundant components, load balancing, and failover mechanisms, the company can minimize application downtime and maintain continuous service in the cloud environment.
