SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 2	<ul style="list-style-type: none">• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

Topic 3	<ul style="list-style-type: none"> • Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

We hope to grow with you and help you get more success in your life.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q43-Q48):

NEW QUESTION # 43

Which of the following considerations are important when creating custom fields? (Select 2 correct answers)

- A. The data type of a field can be dynamically changed, depending on data type availability
- **B. There's a limit to the number of fields, by data type, that can be added to a class**
- **C. When a field has been created and published, that field type has been consumed from the number of available fields on the class**
- D. Published field changes can be reverted via Un-publish to free up memory

Answer: B,C

Explanation:

SAP Ariba allocates a finite number of field "slots" per data type for each class. When a custom field is created and published, it consumes one of these slots. Therefore, there are limits to how many fields of each type you can create per class. The data type cannot be changed after creation, and un-publishing does not reclaim the allocated slot; you must delete the field to free resources. Planning field usage carefully avoids hitting these system limits.

NEW QUESTION # 44

Which of the following can be used to define relation types and establish a custom relationship? Note: There are 2 correct answers to this question.

- A. A standard class such as ariba.basic.core.CommodityCode
- **B. A custom Form Template such as vrealm1936.formDoc_18697.Lessons Learned**
- **C. A custom Flex Master Data Template such as vrealm1936.fmd_58984.Hospital**
- D. A custom Enumeration such as Contracts_Contract Type

Answer: B,C

NEW QUESTION # 45

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Migrate
- B. Push
- **C. Deploy**
- D. Move

Answer: C

Explanation:

The Deploy phase is when final cutover activities take place, including migrating configurations and master data to production, running final system tests, and performing the go-live. The other options are not standard SAP Activate phases for Ariba.

NEW QUESTION # 46

What system is provided by SAP free of charge and provides an outline of how to deploy SAP Ariba solutions with a task list and project management format?

- A. SAP for Me
- B. SAP Cloud Application Lifecycle Management
- C. SAP Cloud Project Studio
- **D. SAP Ariba Enablement Workbook**

Answer: D

Explanation:

The SAP Ariba Enablement Workbook is an Excel-based project management tool provided free by SAP to assist customers and implementation partners in deploying SAP Ariba solutions. It contains detailed task lists, timelines, and activities aligned to the SAP Activate methodology and is designed to guide project teams through deployment steps such as data collection, configuration, and testing. Other options like SAP for Me are customer portals, not deployment tools, and SAP Cloud Application Lifecycle Management is a broader lifecycle tool not focused specifically on Ariba deployments.

NEW QUESTION # 47

Which document outlines the roles and responsibilities for the SAP Deployment Lead assigned to your project?

- A. Inline Help
- B. Onboard Resource Center
- C. Partner Statement of Work
- **D. Deployment Description**

Answer: D

NEW QUESTION # 48

.....
