

100% Pass Nutanix - NCP-US-6.10 - Accurate Valid Test Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Experience

What's more, part of that ITexamReview NCP-US-6.10 dumps now are free: https://drive.google.com/open?id=1-u8VNrz1_pPZXLcibgX6qik1yMRPL2tO

Our website are specialized in offering customers with reliable Nutanix braindumps and study guide, which written by a team of IT experts and certified trainers who enjoy great reputation in the IT field. All NCP-US-6.10 Test Questions are created based on the real test and followed by valid test answers and explanations. We guarantee you get high passing score with our NCP-US-6.10 exam prep.

Before you buy our product, you can download and try out it freely so you can have a good understanding of our NCP-US-6.10 test prep. The page of our product provide the demo and the aim to provide the demo is to let the client understand part of our titles before their purchase and see what form the software is after the client open it. The client can visit the page of our product on the website. So the client can understand our NCP-US-6.10 Exam Materials well and decide whether to buy our product or not at their wishes. The client can see the forms of the answers and the titles. We provide the best service to the client and hope the client can be satisfied.

Sample Nutanix NCP-US-6.10 Questions Answers & NCP-US-6.10 New Exam Braindumps

ITexamReview guarantee NCP-US-6.10 Exam Success rate of 100% ratio, except no one. You choose ITexamReview, and select the training you want to start, you will get the best resources with market and reliability assurance.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q14-Q19):

NEW QUESTION # 14

An administrator needs to recover a previous version of a file or share.
Which Nutanix Files feature should the administrator enable to allow this?

- A. Protection Policies
- **B. Self-Service Restore**
- C. Data Protection
- D. Snapshot

Answer: B

Explanation:

The Self-Service Restore (SSR) feature in Nutanix Files is designed to empower users and administrators to recover previous versions of files or entire shares. This feature leverages the snapshot capabilities of Nutanix Files to present earlier file versions directly to users for easy, self-directed recovery.

The NUSA and NCP-US materials highlight this:

"Self-Service Restore allows end users or administrators to restore individual files or folders from snapshots.

This minimizes administrator intervention and improves recovery times for file-level incidents." While snapshots and protection policies underlie the mechanism, Self-Service Restore is the specific feature that enables user-initiated recovery of earlier versions.

NEW QUESTION # 15

An administrator is trying to configure Mutual CHAP on a Linux guest. During configuration, the administrator keeps getting an Authentication Failure error.

What should the administrator do to resolve the issue?

- A. Configure the password on the target, leave the client password blank.
- B. Configure the password on the client, leave the target password blank.
- C. Configure the client and target with the same password.
- D. Configure the client and target with different passwords.

Answer: C

Explanation:

Mutual CHAP (Challenge-Handshake Authentication Protocol) is used in Nutanix Unified Storage for secure two-way authentication between an iSCSI initiator (client) and the target (VG in Nutanix).

For successful mutual authentication, both the client and the target must use the same CHAP secret:

* The initiator uses this secret to authenticate the target.

* The target uses the same secret to authenticate the initiator.

The NCP-US and NUSA course materials clearly state:

"Mutual CHAP requires the same CHAP secret to be configured on both the iSCSI initiator (client) and target.

Mismatched secrets will result in authentication failures."

In this scenario, the error is because the secrets do not match. Setting the same password on both resolves the issue.

NEW QUESTION # 16

An administrator has noticed that the object stores have stopped gathering analytics data approximately nine months after they were enabled. How can the administrator resume Data Lens functionality?

- A. Disable and re-enable analytics on the object store
- B. Remove and re-add IAM user permissions on the object store
- C. Rename the bucket within the object store
- D. Disable and re-enable versioning on the object store

Answer: A

Explanation:

The issue involves Nutanix Objects stopping the collection of analytics data for Nutanix Data Lens approximately nine months after being enabled. To resume Data Lens functionality, the administrator should disable and re-enable analytics on the object store.

Nutanix Data Lens is a cloud-based service that provides analytics and lifecycle management for Nutanix Objects, and issues with analytics data collection can often be resolved by resetting the analytics configuration.

The Nutanix Unified Storage Administration (NUSA) course states, "If Nutanix Data Lens stops gathering analytics data for an object store, a common troubleshooting step is to disable and re-enable analytics on the object store to reset the connection and resume data collection." This process forces the object store to re-establish its integration with Data Lens, clearing any potential configuration or connectivity issues that may have caused the analytics to stop. The nine-month period suggests a possible timeout or licensing issue with Data Lens, which can be resolved by this action.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further elaborates that

"disabling and re-enabling analytics on a Nutanix Objects store is an effective way to troubleshoot Data Lens functionality issues, ensuring that the object store re-syncs with Data Lens for analytics data collection." The administrator can perform this action through Prism Central by navigating to the Nutanix Objects configuration, disabling analytics for the affected object store, and then re-enabling it.

The other options are incorrect:

* Rename the bucket within the object store: Renaming a bucket does not affect Data Lens integration or analytics data collection,

as Data Lens operates at the object store level, not the bucket level.

* Remove and re-add IAM user permissions on the object store: IAM user permissions control access to the object store but are not directly related to Data Lens analytics collection. Changing permissions is unlikely to resolve this issue.

* Disable and re-enable versioning on the object store: Versioning allows multiple versions of objects to be stored but does not impact Data Lens analytics functionality.

The NUSA course documentation emphasizes that "resetting analytics by disabling and re-enabling the feature on the object store is a standard troubleshooting step to resume Data Lens functionality when analytics data collection stops unexpectedly." References: Nutanix Unified Storage Administration (NUSA) Course, Section on Nutanix Data Lens: "Troubleshooting Data Lens analytics for Nutanix Objects." Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 4: Troubleshoot Nutanix Unified Storage, Subtopic: "Resolving Data Lens analytics issues for Nutanix Objects." Nutanix Documentation (<https://www.nutanix.com>), Nutanix Data Lens Guide: "Troubleshooting analytics data collection for object stores."

NEW QUESTION # 17

A company is managing two Nutanix clusters between two different availability zones: one on-prem and one running in the public cloud (NC2). The company is evaluating Nutanix Files and is looking for a solution that supports: 15-minute RPO or less, guided DR process, and minimal operations at failover time. Which data protection strategy should be considered?

- A. Smart DR
- B. Cloud Connect
- C. Smart Sync
- D. Protection Domain

Answer: A

Explanation:

To meet the requirements of a 15-minute RPO (Recovery Point Objective) or less, a guided DR (Disaster Recovery) process, and minimal operations at failover time for Nutanix Files across two Nutanix clusters (on-prem and in the public cloud via NC2), the company should consider Smart DR. Smart DR is a disaster recovery feature specifically designed for Nutanix Files, enabling replication of file shares between primary and recovery sites with low RPOs, guided failover processes, and automated recovery workflows.

The Nutanix Unified Storage Administration (NUSA) course states, "Smart DR for Nutanix Files supports replication with an RPO as low as 15 minutes, provides a guided disaster recovery process through Prism Central, and minimizes operations at failover by automating client redirection and share activation." Smart DR uses asynchronous replication to copy file share data to the recovery site, allowing for a 15-minute RPO by scheduling replication at 15-minute intervals. The guided DR process is facilitated through Prism Central's UI, which provides step-by-step workflows for failover and failback. Additionally, Smart DR automates client redirection by leveraging AD and DNS updates, minimizing manual operations during failover.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further elaborates that "Smart DR is ideal for Nutanix Files deployments across availability zones, such as on-prem and NC2, supporting RPOs as low as 15 minutes, guided recovery workflows, and automated failover with minimal operational overhead." This makes Smart DR the best match for the company's requirements, as it addresses all three criteria effectively.

The other options are incorrect:

* Protection Domain: Protection Domains are used for VM-level replication and disaster recovery in Nutanix, not for Nutanix Files. They also typically have higher RPOs (e.g., 1 hour) and are not designed for file share recovery.

* Smart Sync: Smart Sync is not a Nutanix feature; it may refer to third-party tools or unrelated functionalities and is not applicable here.

* Cloud Connect: Cloud Connect is a feature for backing up or replicating data to public cloud providers, but it is not specific to Nutanix Files and does not support a 15-minute RPO or guided DR processes for file shares.

The NUSA course documentation highlights that "Smart DR is the recommended data protection strategy for Nutanix Files in multi-site environments, offering low RPOs, guided DR workflows, and automated failover to minimize downtime and operational complexity." References:

Nutanix Unified Storage Administration (NUSA) Course, Section on Nutanix Files: "Smart DR for disaster recovery across availability zones." Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 2: Configure and Utilize Nutanix Unified Storage, Subtopic: "Smart DR capabilities for Nutanix Files." Nutanix Documentation (<https://www.nutanix.com>), Nutanix Files Administration Guide: "Smart DR setup for multi-site file share protection."

NEW QUESTION # 18

An administrator has determined that adding File Server VMs to the cluster will provide more resources.

What must the administrator validate so that the new File Server VMs can be added?

- A. Ensure Files Analytics is installed.
- **B. Sufficient nodes in the cluster is greater than current number of FSVMs.**
- C. Sufficient storage container space is available to host the volume groups.
- D. Ensure network ports are available.

Answer: B

NEW QUESTION # 19

.....

Almost those who work in the IT industry know that it is very difficult to prepare for NCP-US-6.10. Although our ITexamReview cannot reduce the difficulty of NCP-US-6.10 exam, what we can do is to help you reduce the difficulty of the exam preparation. Once you have tried our technical team carefully prepared for you after the test, you will not fear to NCP-US-6.10 Exam. What we have done is to make you more confident in NCP-US-6.10 exam.

Sample NCP-US-6.10 Questions Answers: <https://www.itexamreview.com/NCP-US-6.10-exam-dumps.html>

You can get actual Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) exam questions and prepare for your test in a short time, All in all, high efficiency of NCP-US-6.10 exam material is the reason for your selection, ITexamReview keeps an eye on changes in the Nutanix NCP-US-6.10 exam syllabus and updates Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 NCP-US-6.10 exam dumps accordingly to make sure they are relevant to the latest exam topics, Practice on Nutanix NCP-US-6.10 practice test software improves your problem-solving skills and enables you to complete the Nutanix NCP-US-6.10 exam within the time set.

You would give them to your friends and family, If you add the Nutanix certification NCP-US-6.10 exam product of ITexamReview to your cart, you will save a lot of time and effort.

You can get actual Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) exam questions and prepare for your test in a short time, All in all, high efficiency of NCP-US-6.10 exam material is the reason for your selection.

Pass Guaranteed 2026 Nutanix - Valid Test NCP-US-6.10 Experience

ITexamReview keeps an eye on changes in the Nutanix NCP-US-6.10 exam syllabus and updates Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 NCP-US-6.10 exam dumps accordingly to make sure they are relevant to the latest exam topics.

Practice on Nutanix NCP-US-6.10 practice test software improves your problem-solving skills and enables you to complete the Nutanix NCP-US-6.10 exam within the time set.

And our pass rate of the NCP-US-6.10 study engine is high as 98% to 100%.
