## Avaya Aura Communication Applications Implement Sample Questions (Q116-Q121):

### NEW QUESTION # 116

A user has been informed by the Attendant that a call for them has been parked using the Avaya Call Park and Page running on the Breeze platform.

How can the user retrieve the parked call?

- **A. by dialing the Park extension used to park the call**
- B. by dialing the system-wide Pilot extension
- C. by dialing the Answer Back feature access code
- D. by pressing the Call Park button on their endpoint

**Answer: A**

Explanation:

When the Avaya Call Park and Page snap-in (running on the Avaya Breeze platform) parks a call, it effectively places the call into a "holding pattern" on a specific system extension (the "Park Slot").

Retrieval Process: Once the attendant informs the user that a call is parked for them, they simply need to dial the specific extension where the call is currently held.

System Logic: When the user dials that extension, the Breeze snap-in detects the request, identifies that a call is parked on that specific resource, and immediately "unparks" (connects) that call to the user's current device.

### NEW QUESTION # 117

In Avaya Session Border Controller for Enterprise (SBCE) 7.x, you need to download the 46xxsettings.txt file to a Remote Worker device.

What needs to be configured under DMZ Services > Relay Services?

- A. Application Relay and Reverse Proxy
- **B. Application Relay**
- C. Reverse Proxy
- D. Application Relay and File Transfer

**Answer: B**

Explanation:

Relay Services are used to define how file transfers (e.g., for phone firmware upgrades and configuration), are routed to the Remote Worker endpoints.

Example: For accessing the file server using HTTPS protocol. The following screenshot shows the newly created Relay Services

### NEW QUESTION # 118

How does AES support complex contact center functionalities such as call recording and workforce optimization?

- A. By directly storing data in a central database
- B. By providing standalone contact center solutions
- **C. Through its scalable APIs that connect to various auxiliary systems**
- D. By integrating with existing CRM systems

**Answer: C**

### NEW QUESTION # 119

To watch Avaya Session Border Controller for Enterprise (SBCE) messages in real-time as they pass through the SBCE, which tool on the SIP command line do you use?

- **A. traceSBC**
- B. traceTOOL
- C. trace
- D. traceSM

**Answer: A**

Explanation:

The tcpdump tool is the main troubleshooting tool of Avaya SBCE, which can capture network traffic. Using tcpdump is a reliable way to analyze the information arriving to and sent from the SBC. However, tcpdump has its own limitations, which can make troubleshooting difficult and time consuming. This traditional tool is not useful in handling encrypted traffic and real-time troubleshooting.

The traceSBC tool offers solutions for both issues.

In Real-time mode, traceSBC must be on active Avaya SBCE. traceSBC is started without specifying a file in the command line parameters. The tool automatically starts processing the log files. The live capture can be started and stopped anytime without affecting service.

Example:

```
# traceSBC
```

### NEW QUESTION # 120

What is the correct URL for connecting to the Application Enablement Services (AES) web interface, and the default login ID?

- A. <https://<AES Management IP Address>>, then enter login=cust
- B. <https://<AES Management IP Address>:8443>, then enter login=craft
- C. <http://<AES Management IP Address>>, then enter login=admin
- D. <https://<AES Management IP Address>/admin>, then enter login=ucsec

**Answer: A**

Explanation:

To access the Application Enablement Services (AES) Management Console (OAM), you use a standard web browser and the following credentials:

The URL: Avaya AES uses HTTPS for secure management. In modern versions of AES, you simply navigate to the Management IP address without needing a specific port suffix like :8443 or a specific subdirectory like /admin (though the server will often redirect you to the login page automatically).

The Login ID: The default administrative account used for customer-level management of the AES is cust.
