College Admission Armed Services Vocational Aptitude Battery (ASVAB) Sample Questions (Q482-Q487):

NEW QUESTION # 482

A house contains one 12-foot-x-14-foot bedroom, one 12-foot-x-10-foot bedroom, and one 8-foot-x- 12-foot bedroom. What's the total amount of carpeting needed to carpet all three bedrooms?

- A. 384 square yards
- B. 216 square yards
- C. 128 square yards
- D. 88 square yards

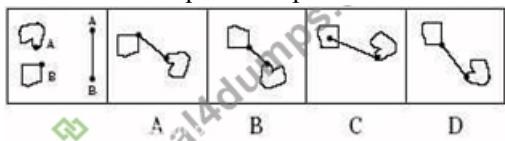

Answer: C

Explanation:

Find the area of each bedroom and add them together: $12 \times 14 = 168$; $12 \times 10 = 120$; $8 \times 12 = 96$. $168 + 120 + 96 = 384$ square feet. Then, because 3 feet make up a yard, divide the total area in square feet by 3 to determine the number of square yards needed: $384 \div 3 = 128$ square yards.

NEW QUESTION # 484

Specialized warships are relatively recent in origin. They have always been expensive to build and need to be manned by crews with specialized skills. Their construction and operation therefore requires a great deal of the ruler's wealth. The earliest form of fighting at sea was probably piratical as opposed to political; even a pirate needs resources to get his start. The first navies may or may not have been pirate hunters but navies, by definition, cost more than individual ships. Whatever perspective one takes, fighting on water has cost more than fighting on land from the beginnings.

According to this passage, navies

- A. normally cooperate with pirates to avoid attack.
- B. are suitable to be built by specialists.
- C. are more expensive to have and maintain than individual ships
- D. all started out as pirates.

Answer: C

Explanation:

According to this passage, navies are more expensive to have and maintain than individual ships. The passage states that, "navies, by definition, cost more than individual ships."

NEW QUESTION # 485

A bonded courier drove for 7 hours on back roads at an average speed of 48 miles per hour. Her car gets 21 miles per gallon of gas. How many gallons of gas did she use?

- A. 0
- B. H
- C. 1
- D. 2

Answer: A

Explanation:

Find the number of miles traveled by multiplying the rate, 48 miles per hour, by the time, 7 hours.

$$48 \times 7 = 336 \text{ miles}$$

The number of gallons of gas used is the number of miles driven divided by the number of miles per gallon.

$$336 / 21 = 112 / 7$$

$$= 16 \text{ gallons}$$

NEW QUESTION # 486

The proportioning valve in a hydraulic brake system

- A. reduces pressure to the front brakes.
- B. reduces pressure to the rear brakes.
- C. is used only on drum-type brake systems.
- D. controls the brake warning switch.

Answer: B
