Salesforce Order-Management-Administrator Exam Syllabus Topics:

Topic	Details

Topic 1	• Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.
Topic 2	• User Experience and Customization: This section emphasizes leveraging Salesforce's Lightning UI to enhance user experiences. The Salesforce Order Management Administrator Consultant will customize experiences for users and managers through tools like the Lightning Page Editor, Report Builder, and out-of-the-box components. Success in this area ensures optimized workflows and improved operational efficiency.
Topic 3	• Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.
Topic 4	• Order Management Basics: In this topic, the Salesforce Order Management Administrator Consultant learns to position Order Management effectively within Salesforce's core architecture. By articulating the extensible platform capabilities, the ability to integrate with third-party systems, and the overall value proposition, this knowledge helps highlight Order Management's seamless adaptability and efficiency. These insights are crucial for demonstrating business value during client engagements.
Topic 5	• Deployment and Debugging: In this area, aspiring order management administrator consultant demonstrates a deep understanding of deployment options, life cycles, and the configuration of supporting objects. This includes creating processes from scratch, leveraging pre-set data, and validating results in runtime scenarios.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q21-Q26):

NEW QUESTION # 21
Which two statements about the Order Summary object are accurate?

- A. It can be deleted using the Delete button
- B. It is read-only for financial order data
- C. It has a single shipping address to which all Order Items will be shipped
- D. it does not exist without the original Order object

Answer: B,D

Explanation:
Explanation
Two statements about the Order Summary object that are accurate are:
It does not exist without the original Order object. An Order Summary is a record that represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary has a master-detail relationship to the Order object, which means that it cannot exist without its parent Order record.
It is read-only for financial order data. An Order Summary contains financial order data, such as total amount, tax amount, discount amount, etc., that are populated from the external system when the order is created. These fields are read-only and cannot be edited in Order Management.

NEW QUESTION # 22
A customer orders 10 products. The products must be shipped to three different locations. Two of the orders are fulfilled at the same location. How many Fulfillment Orders would be created for this order?

- A. One Fulfilment Order per item in the order, totaling 10
- B. One Fulfillment Order per Fulfillment Location, totaling 2
- C. One Fulfillment Order pet destination, totaling 3
- D. One Fulfillment Order

Answer: C

Explanation:
The number of Fulfillment Orders that would be created for this order is one per destination, totaling 3. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc. The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. In this case, since the products must be shipped to three different locations, three Fulfillment Orders are created for each destination. NEW QUESTION # 23
An admin is working with Order Management licensed as standalone (B2C Commerce is not in the scenario).
The admin submits a JSON payload using Workbench and Workbench indicates the operation was successful The second time the same payload is submitted the operation fails. What are two likely causes?

- A. The Order Reference Number must be updated
- B. The payment data must be updated
- C. The stock levels inthe org are depleted from the first order
- D. Stock Keeping Unit values must be updated

Answer: A,B

Explanation:
Two likely causes that could make the second submission of the same JSON payload fail are:
The payment data must be updated. The payment data in the JSONpayload contains information such as the payment method, amount, and authorization code. If the same payment data is used for the second order, it may cause a duplicate payment error or an invalid authorization error.
The Order Reference Number must be updated. The Order Reference Number is a unique identifier for each order that is generated by the external system and sent in the JSON payload. If the same Order Reference Number is used for the second order, it may cause a duplicate order error or an invalid order error.

NEW QUESTION # 24
Based on some changes in Universal Containers' Commerce engine, new Orders are expected to have two additional attributes at the header level. In Order Management, which other Object besides Order also needs to be extended?

- A. Payment Summary
- B. Change Order
- C. Delivery Groups
- D. Order Summary

Answer: D

Explanation:
Based on some changes in Universal Containers' Commerce engine, new Orders are expected to have two additional attributes at the header level. In Order Management, besides Order, the other object that also needsto be extended is Order Summary. An Order Summary is a record that stores information about an order, such as the total amount, the number of items, and the fulfillment status. An Order Summary is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. To extend an object in Order Management, an administrator can create custom attributes on that object that match the API name and data type of the corresponding attributes in B2C Commerce. Objects

NEW QUESTION # 25

An administrator is attempting to automatically create process exceptions for the Fulfillment Order object.
When does the Create Process Exception flow get triggered?

- A. A Process Exception Event is fired
- B. On a daily basis using Schedule Jobs in Setup
- C. A Fulfillment Order or Order Summary object are modified and any modification meets the error criteria

Answer: A

NEW QUESTION # 26

......
