## CrowdStrike Certified SIEM Engineer Sample Questions (Q60-Q65):

### NEW QUESTION # 60

Following the principle of least privilege, which is the appropriate role to grant a Falcon Next-Gen SIEM user the permissions to read case data and write XDR data while denying the permission to write case templates?

- A. NG SIEM Security Lead
- B. NG SIEM Analyst - Read Only
- C. NGSiem Administrator
- **D. NG SIEM Analyst**

**Answer: D**

Explanation:

The best answer is C. NG SIEM Analyst .

I need to be careful here: I did not find a public CrowdStrike permissions matrix that explicitly lists this exact combination of rights by role. So this answer is the best-supported least-privilege inference , not one I can claim is directly documented 100%.

Why C is the strongest choice:

\* NG SIEM Analyst - Read Only would not fit because the question requires write XDR data permissions.

\* NGSIEM Administrator and NG SIEM Security Lead are broader roles and would not satisfy least privilege if a narrower analyst role can do the job.

\* That leaves NG SIEM Analyst as the most plausible least-privilege built-in role for reading case data and writing XDR data while not granting broader administrative capabilities. CrowdStrike's Next-Gen SIEM materials describe the platform as combining centralized case management and XDR workflows, but the public pages I found do not expose the exact internal role matrix.

### NEW QUESTION # 61

Which field is compliant with CrowdStrike Parsing Standard (CPS)?

- A. Parser.type
- B. Parser.name
- C. #event.trigger
- D. #event.dataset

**Answer: D**

Explanation:

The correct answer is B. #event.dataset .

CrowdStrike's CPS documentation explicitly lists #event.dataset as one of the CPS-compliant parser tags.

The CPS migration documentation also repeats that CPS-compliant parsers use tags for fields including #ecs.version , #event.dataset , and #event.kind .

Why the other options are incorrect:

Parser.type and Parser.name are not listed as CPS-compliant tags in the CPS standard.

#event.trigger is also not listed among the CPS-compliant fields/tags.

Therefore, the only CPS-compliant option given is #event.dataset .

### NEW QUESTION # 62

When creating an API client for Falcon SIEM Connector, which permission is required for the connector to read Falcon event streams?

- A. Detection Management: Write
- B. Event Streams: Read
- C. Hosts: Read
- D. Incidents: Read

**Answer: B**

Explanation:

The Falcon SIEM Connector requires an API client with Read access to Event Streams . This permission allows the connector to authenticate to Falcon and receive streaming event data. Other permissions such as Hosts, Incidents, or Detection Management are not the required permission for establishing Falcon event- stream ingestion.

### NEW QUESTION # 63

You have been tasked with parsing the following space-delimited log:

```
2025-06-03 12:13:07 johndoe 192.168.5.15 login
```

The log source data is guaranteed to always be in the same order.

Which function can parse this log?

- A. parseCEF()
- B. parseJson()
- C. parseFixedWidth()

- **D. parseCsv()**

**Answer: D**

Explanation:

The correct answer is C. parseCsv() .

CrowdStrike LogScale documentation for parseCsv() states that the function supports a configurable delimiter parameter, and it is used to split a field into named columns. Because this log is space-delimited and the values are always in the same order, parseCsv() is the appropriate parser function by specifying a space as the delimiter and naming the columns in order.

Why the other options are incorrect:

- \* A. parseCEF() is for CEF-formatted logs, which this event is not.
- \* B. parseJson() is for JSON, and this event is plain text.
- \* D. parseFixedWidth() is meant for logs where each field occupies a strict character width.

CrowdStrike's docs describe it as valuable when data must maintain strict positional formatting and defined field lengths. This question only guarantees field order , not fixed character widths, so parseFixedWidth() is not the best match.

#### **NEW QUESTION # 64**

What is the purpose of labels in Fleet Management?

- A. Set passwords for collector instances
- B. Monitor network traffic
- **C. Categorize collectors for group configurations**
- D. Assign IP addresses to collectors

**Answer: C**

Explanation:

CrowdStrike's Fleet Management documentation for Falcon LogScale Collector explains that labels are used to associate metadata with a Fleet Management configuration and with collector instances so they can be tagged, identified, organized, and filtered. The docs specifically describe labels as helping organize collectors by criteria such as environment, region, service, or other custom values. That directly matches option B:

Categorize collectors for group configurations .

Why the other options are incorrect:

Option A is incorrect because labels are not used for authentication or password management.

Option C is incorrect because labels do not perform traffic monitoring; they are metadata for organization and selection.

Option D is incorrect because labels do not assign network settings such as IP addresses.
