### VCE Terraform-Associate-003 Dumps - Testking Terraform-Associate-003 Exam Questions

At present, our company has launched all kinds of Terraform-Associate-003 study materials, which almost covers all official tests. Every Terraform-Associate-003 exam questions are going through rigid quality check before appearing on our online stores. So you do not need to worry about trivial things and concentrate on going over our Terraform-Associate-003 Exam Preparation. After careful preparation, you are bound to pass the Terraform-Associate-003 exam. Just remember that all your efforts will finally pay

off.

## HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q249-Q254):

### NEW QUESTION # 249

You must use different Terraform commands depending on the cloud provider you use.

- A. True
- B. False

**Answer: B**

Explanation:

Explanation

You do not need to use different Terraform commands depending on the cloud provider you use. Terraform commands are consistent across different providers, as they operate on the Terraform configuration files and state files, not on the provider APIs directly.

### NEW QUESTION # 250

Which command lets you experiment with terraform expressions?

- A. Terraform env
- B. Terraform console
- C. Terraform test
- D. Terraform validate

**Answer: B**

Explanation:

This is the command that lets you experiment with Terraform expressions, by providing an interactive console that allows you to evaluate expressions and see their results. You can use this command to test your expressions before using them in your configuration files.

### NEW QUESTION # 251

Which of the following does terraform apply change after you approve the execution plan? (Choose two.)

- A. Terraform code
- B. The execution plan
- C. The .terraform directory
- D. State file
- E. Cloud infrastructure Most Voted

**Answer: D,E**

Explanation:

The terraform apply command changes both the cloud infrastructure and the state file after you approve the execution plan. The command creates, updates, or destroys the infrastructure resources to match the configuration. It also updates the state file to reflect the new state of the infrastructure.

The .terraform directory, the execution plan, and the Terraform code are not changed by the terraform apply command. References = Command: apply and Purpose of Terraform State

### NEW QUESTION # 252

One remote backend configuration always maps to a single remote workspace.

- A. False
- B. True

**Answer: B**

Explanation:

Explanation

The remote backend can work with either a single remote Terraform Cloud workspace, or with multiple similarly-named remote workspaces (like networking-dev and networking-prod). The workspaces block of the backend configuration determines which mode it uses. To use a single remote Terraform Cloud workspace, set workspaces.name to the remote workspace's full name (like networking-prod). To use multiple remote workspaces, set workspaces.prefix to a prefix used in all of the desired remote workspace names. For example, set prefix = "networking-" to use Terraform cloud workspaces with names like networking-dev and networking-prod. This is helpful when mapping multiple Terraform CLI workspaces used in a single Terraform configuration to multiple Terraform Cloud workspaces<sup>3</sup>. However, one remote backend configuration always maps to a single remote workspace, either by name or by prefix. You cannot use both name and prefix in the same backend configuration, or omit both. Doing so will result in a configuration error<sup>3</sup>. References = [Backend Type: remote]<sup>3</sup>

### NEW QUESTION # 253

What is the purpose of the terraform.lock.hcl file in Terraform?

- A. Preventing Terraform runs from occurring.
- B. Storing references to workspaces, which are locked.
- C. Tracking specific provider dependencies.
- D. There is no such file.

**Answer: C**

Explanation:

Detailed Explanation:

\* Rationale for Correct Answer (D):The terraform.lock.hcl file is automatically created and maintained by Terraform. It records the specific versions and checksums of providers used in a configuration, ensuring consistent runs across environments and machines.

\* Analysis of Incorrect Options:

- \* A. There is no such file: Incorrect - the lock file exists and is crucial for dependency management.
- \* B. Storing references to workspaces: Incorrect - workspaces are tracked in the state file, not the lock file.
- \* C. Preventing Terraform runs: Incorrect - the lock file does not block runs; it enforces consistent provider versions.

\* Key Concept:The terraform.lock.hcl file enforces provider version consistency, which is critical for reproducible and reliable Terraform deployments.

Reference:Terraform Exam Objective - Read, Generate, and Modify Configurations.

### NEW QUESTION # 254

.....

If you are still afraid of trying our Terraform-Associate-003 exam quiz, you will never have a chance to grow. Opportunities are always for those who prepare themselves well. The only way to harvest wealth is challenging all the time. Our Terraform-Associate-003 practice materials are waiting for you. Cheer up for yourself. There is nothing that you will lose for our demos of the Terraform-Associate-003 study materials are totally free to download.
