

F5CAB5 Exam Fee & Interactive F5CAB5 EBook

DOWNLOAD the newest ActualPDF F5CAB5 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1eCOzroBJoqWTTwaSgQcHU0vww-_8b1i8

To assist applicants preparing for the BIG-IP Administration Support and Troubleshooting (F5CAB5) real certification exam effectively, ActualPDF offers F5 F5CAB5 desktop practice test software and a web-based practice exam besides actual PDF F5CAB5 exam questions. These F5CAB5 Practice Exams replicate the F5 F5CAB5 real exam scenario and offer a trusted evaluation of your preparation. No internet connection is necessary to use the F5CAB5 Windows-based practice test software.

F5 F5CAB5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Given a scenario, review basic stats to confirm functionality: This section involves interpreting traffic object statistics and network configuration statistics to validate system functionality.
Topic 2	<ul style="list-style-type: none">Identify network level performance issues: This section focuses on diagnosing network problems including packet capture needs, interface availability, packet drops, speed and duplex settings, and TCP profile optimization,
Topic 3	<ul style="list-style-type: none">Determine resource utilization: This domain covers analyzing system resources including control plane versus data plane usage, CPU statistics per virtual server, interface statistics, and disk and memory utilization.
Topic 4	<ul style="list-style-type: none">Identify the reason a pool is not working as expected: This domain focuses on troubleshooting pools including health monitor failures, priority group membership, and configured versus availability status of pools and members.
Topic 5	<ul style="list-style-type: none">Identify the reason load balancing is not working as expected: This domain addresses troubleshooting load balancing by analyzing persistence, priority groups, rate limits, health monitor configurations, and availability status.

- Given a scenario, interpret traffic flow: This domain covers understanding traffic patterns through client-server communication analysis and interpreting traffic graphs and SNMP results.

F5CAB5 Exam Fee | Pass Guaranteed | Refund Guaranteed

One of our outstanding advantages is our high passing rate, which has reached 99%, and much higher than the average pass rate among our peers. Our high passing rate explains why we are the top F5CAB5 prep guide in our industry. One point does farm work one point harvest, depending on strength speech! The source of our confidence is our wonderful F5CAB5 Exam Questions. Passing the exam won't be a problem as long as you keep practice with our F5CAB5 study materials about 20 to 30 hours.

F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which file should the BIG-IP Administrator check to determine when a Virtual Server changed its status from RED to GREEN?

- A. /var/log/lastlog
- B. /var/log/monitors
- C. /var/log/ltn
- D. /var/log/audit

Answer: C

Explanation:

Status changes for local traffic objects (Virtual Servers, Pools, Nodes) are recorded in the Local Traffic Manager (LTM) log Health State Logging: When a health monitor marks a resource as available (Green) or unavailable (Red), the system generates a log message in /var/log/ltn.

Log Entry Example: A transition from Red to Green will appear as a message similar to: 010100273: Pool/Common/my_pool member /Common/10.0.0.1:80 monitor status up.

Evaluation of Other Options:

/var/log/audit (Option A) logs who changed a configuration, not automated state changes from health monitors.

/var/log/lastlog (Option C) is a standard Linux file that tracks the last login time of users.

/var/log/monitors (Option D) is not a standard log file on the BIG-IP system.

NEW QUESTION # 48

A BIG-IP Administrator receives reports from users that SSL connections to the BIG-IP device are failing. Upon checking the log files, the administrator notices: SSL transaction (TPS) rate limit reached. stats show a maximum of 1200 client-side SSL TPS and 800 server-side SSL TPS.

What is the minimum SSL license limit required to handle this peak?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Troubleshooting failed SSL handshakes involves interpreting the resource limits defined by the system's license. The log message SSL transaction (TPS) rate limit reached indicates the BIG-IP is dropping SSL connections because it has exceeded its licensed "Transactions Per Second" capacity. When analyzing stats to determine the correct license level, the administrator must focus on "Client-side" SSL TPS. This represents the initial encrypted handshakes between users and the BIG-IP virtual servers. In this scenario, the peak client-side demand is 1200 TPS.

While the 800 server-side transactions represent re-encryption toward the backend, F5's primary SSL TPS license limits typically

apply to the client-facing side of the traffic flow. Therefore, to resolve the intermittent connectivity issues and ensure the virtual server works reliably during peaks, the license must be upgraded to at least 1200 TPS. Confirming this peak via statistics and comparing it to the current license is a standard troubleshooting step for SSL performance issues.

NEW QUESTION # 49

Due to a change in application requirements, a BIG-IP Administrator needs to modify the configuration of a Virtual Server to include a Fallback Persistence Profile. Which persistence profile type should the BIG-IP Administrator use for this purpose?

- A. Universal
- B. Hash
- C. Source Address Affinity
- D. SSL

Answer: C

NEW QUESTION # 50

Users report that traffic is negatively affected every time a BIG-IP device fails over. The traffic becomes stabilized after a few minutes. What should the BIG-IP Administrator do to reduce the impact of future failovers?

- A. Enable Failover Multicast Configuration
- B. Set up Failover Method to HA Order
- C. Configure a global SNAT Listener
- D. Configure MAC Masquerade

Answer: D

Explanation:

When traffic "stabilizes after a few minutes" following a failover, it points to a network-level performance issue involving ARP cache on upstream routers and switches. Each BIG-IP interface has a unique hardware MAC address. During failover, the Standby device takes over the floating IP address, but the upstream switch still associates that IP with the MAC of the now-offline device. Traffic is lost until the switch learns the new MAC or its ARP entry expires. "MAC Masquerading" solves this by creating a shared, virtual MAC address for the floating traffic group. This virtual MAC is used by whichever device is currently active. Because the MAC address for the virtual server IP never changes from the perspective of the network, the upstream devices do not need to update their ARP tables. This troubleshooting solution eliminates the delay associated with failover, providing a seamless transition and ensuring that application traffic flow is not disrupted when the BIG-IP HA state changes.

NEW QUESTION # 51

Which command displays ARP table entries?

- A. show sys dns
- B. show net arp
- C. show net self
- D. show sys route

Answer: B

Explanation:

Used to verify IP-to-MAC address mappings.

NEW QUESTION # 52

.....

Who don't want to be more successful and lead a better life? But it's not easy to become better. Our F5CAB5 exam questions can give you some help. After using our F5CAB5 study materials, you can pass the exam faster and you can also prove your strength. Of course, our F5CAB5 Practice Braindumps can bring you more than that. You can free download the demos to take a look at the advantages of our F5CAB5 training guide.
