### SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition 認定 C\_S4CPB\_2502 試験問題 (Q49-Q54):

#### 質問 #49

In which application can you see the available business context capacity remaining for extension items?

- A. Extensibility Cockpit app
- B. Extensibility Inventory app
- C. Custom Reusable Elements app
- D. Extensibility Explorer app

正解: A

解説:

The Extensibility Cockpit app within SAP S/4HANA Cloud Public Edition is a central tool for managing and monitoring the extensibility aspects of the system. It provides an overview of the extension items created, including custom fields, custom business objects, and other extension elements. Importantly, it also shows the available business context capacity remaining for these extension items, which is crucial for ensuring that the system's extensibility is managed within the provided limits. This helps in planning and managing customizations effectively, ensuring that the system remains scalable and performant.

#### 質問 #50

What does a partner line of business configuration expert reference when identifying business processes to cover in the Fit-to-Standard workshops?

- A. SAP Signavio Process Collaboration Hub
- B. Digital Discovery Assessment
- C. Business Driven Configuration Questionnaire
- D. SAP Signavio Journey Modeler

正解: A

解説:

A partner line of business configuration expert plays a crucial role in preparing for Fit-to-Standard workshops, which are pivotal in aligning SAP S/4HANA Cloud Public Edition's capabilities with the customer's business requirements. To identify and select relevant business processes for discussion in these workshops, the expert would reference:

\* SAP Signavio Process Collaboration Hub: This tool serves as a comprehensive repository and collaboration platform for business process documentation and best practices. It provides detailed insights into various business processes, including their steps, variations, and best practices, as established in the SAP ecosystem. By referencing the SAP Signavio Process Collaboration Hub, a line of business configuration expert can identify relevant standard business processes that SAP S/4HANA Cloud supports, which should be covered during the Fit-to-Standard workshops. This ensures that the workshops focus on processes critical to the customer's operations and that any gaps or customization needs are identified early in the implementation phase.

#### 質問 #51

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create very simple release or approval procedures

- B. To create cross-product workflow procedures
- C. To create business processes with a high number of people involved in a pre-defined sequence
- D. To create complex, repeated work processes with iterative cycles
- E. To create standard procedures from SAP Signavio Process Navigator

正解: B、C、D

解説:

SAP S/4HANA Cloud Business Workflows are designed to enhance and automate business processes within the organization. They serve multiple purposes:

- \* To create complex, repeated work processes with iterative cycles: These workflows are designed to handle intricate processes that occur regularly within the business environment, allowing for automation and efficiency in tasks that require repetition and involve multiple steps or conditions.
- \* To create cross-product workflow procedures: This capability allows for the integration of various SAP products and services into a cohesive workflow, ensuring smooth and interconnected operations across different aspects of the business. It enables workflows that span across different SAP applications and solutions, providing a unified approach to managing business processes.
- \* To create business processes with a high number of people involved in a pre-defined sequence: SAP S/4HANA Cloud Business Workflows are capable of handling processes that involve many participants, orchestrating the sequence of tasks to be completed by different individuals or departments. This ensures that each step of the process is executed in the right order by the right person, enhancing collaboration and efficiency.

質問 # 52

What can you do with the SAP for me mobile app? Note: There are 2 correct answers to this question.

- A. Access the SAP ONE Support Launchpad
- B. Get full transparency into your SAP product portfolio
- C. Interact with SAP easily
- D. Download learning content from SAP Learning Hub

正解: B、C

質問 # 53

Which tasks are mandatory before you can migrate data for a specific object? Note: There are 2 correct answers to this question.

- A. Predecessor objects have been migrated
- B. You select the same migration method previously used for other objects
- C. All previous migration projects are in the "Finished" status
- D. Permission to migrate the data has been assigned

正解: A、D

解説:

Before you can migrate data for a specific object, you need to ensure that the following tasks are completed:

\* Predecessor objects have been migrated: Some migration objects depend on other migration objects that need to be migrated first. For example, before you can migrate sales orders, you need to migrate customers, products, and pricing conditions. You can check the dependencies of migration objects in the Migration Cockpit or in the Migration Object Modeler12.

\* Permission to migrate the data has been assigned: In addition to having permission to access the Migrate Your Data app, you need permission to migrate each type of data. This is because the Migration Cockpit tool uses the same APIs and technical checks that would be done if you were to create a new data value through the respective application. For example, if you need to create a new bank record in your system, you would use the application, Manage Banks - Master Data. The app would present you with several fields capturing information about the new bank to create the record in your system. Now if you need to create 1,000 banks, it wouldn't be feasible to create each through the Manage Banks - Master Data app one-by-one. Therefore, you need to have the permission to use the Manage Banks - Master Data app in order to migrate bank data using the Migration Cockpit3.

The other tasks are not mandatory before you can migrate data for a specific object. You can select different migration methods for different objects, depending on your source system and data format. You can also have multiple migration projects in progress at the same time, as long as they do not contain the same migration objects4.
