

# C-CPI-2506 Best Practice - Certification C-CPI-2506 Exam Infor

P.S. Free 2026 SAP C-CPI-2506 dumps are available on Google Drive shared by Free4Torrent: [https://drive.google.com/open?id=1xogJSms-OH7\\_wrXHhY-dlcH7JllhyQmx](https://drive.google.com/open?id=1xogJSms-OH7_wrXHhY-dlcH7JllhyQmx)

There are three versions of C-CPI-2506 guide quiz. You can choose the most suitable version based on your own schedule. PC version, PDF version and APP version, these three versions of C-CPI-2506 exam materials you can definitely find the right one for you. Also our staff will create a unique study plan for you: In order to allow you to study and digest the content of C-CPI-2506 practice prep more efficiently, after purchasing, you must really absorb the content in order to pass the exam. C-CPI-2506 guide quiz really wants you to learn something and achieve your goals.

## SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li> </ul>

### Quiz Perfect C-CPI-2506 - SAP Certified Associate - Integration Developer Best Practice

Using actual SAP Certified Associate - Integration Developer (C-CPI-2506) dumps PDF is the best way to make your spare time useful for the C-CPI-2506 test preparation. We also provide you with customizable desktop SAP C-CPI-2506 practice test software and web-based SAP C-CPI-2506 Practice Exam. You can adjust timings and C-CPI-2506 questions number of our C-CPI-2506 practice exams according to your training needs.

### SAP Certified Associate - Integration Developer Sample Questions (Q20-Q25):

#### NEW QUESTION # 20

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. A local installation is not required.
- B. Integration processes can be developed offline.
- C. Customer-to-Customer(C2C) integrations can be developed
- D. Predefined scenarios can be used out-of-the-box.

**Answer: A,D**

Explanation:

Some advantages of the cloud integration capability within SAP Integration Suite are:

A local installation is not required. The cloud integration capability is a cloud-based service that runs on SAP Business Technology Platform (BTP). It does not require any installation or maintenance on your local system. You can access it from any web browser and start developing and deploying integration flows using a graphical user interface or an Eclipse-based tooling.

Predefined scenarios can be used out-of-the-box. The cloud integration capability provides a rich set of predefined integration scenarios that cover various use cases and domains, such as SAP-to-SAP integration, SAP-to-non-SAP integration, hybrid integration, process orchestration, and so on. You can browse and discover these scenarios from the Discover page of the cloud integration web UI or from the SAP API Business Hub. You can use these scenarios as they are or customize them according to your needs. Reference: Cloud Integration Capability Overview | SAP Help Portal, Discover Integration Content | SAP Help Portal

#### NEW QUESTION # 21

You have created a product based on an API proxy, but you have not published the product yet. What is a consequence?

- A. The product is displayed in the API Business Hub Enterprise but is grayed out.
- B. The product is displayed in the API Business Hub Enterprise with the note "not published".
- C. The product is not displayed in the API Business Hub Enterprise.

**Answer: C**

Explanation:

In API Management (part of SAP Integration Suite), when you create an API Product (which bundles API Proxies for consumption):

Publishing is required before it becomes visible in API Business Hub Enterprise (Developer Portal).

If the product is not yet published, it remains in the design-time environment and is invisible to app developers.

Only published products are available for subscription and discovery.

Other options:

The product will not be shown grayed out or with a "not published" note; it simply won't be visible at all in the Business Hub Enterprise.

#### NEW QUESTION # 22

Where must you configure an HTTPS inbound adapter with OAuth 2.0 authentication?

- A. In the process runtime
- **B. In the integration flow**
- C. In the adapter
- D. In the SAP Integration Suite

**Answer: B**

Explanation:

An HTTPS inbound adapter is an adapter that allows an integration flow to receive messages from external systems using the HTTPS protocol. OAuth 2.0 authentication is a method of authentication that allows clients to access protected resources on behalf of a resource owner by obtaining an access token from an authorization server. To configure an HTTPS inbound adapter with OAuth 2.0 authentication, you must do it in the integration flow where you define the adapter settings. You can choose OAuth 2.0 as the authentication type and specify the required parameters, such as client ID, client secret, token URL, scope, and so on. You can also configure additional security options, such as SSL certificate, CSRF protection, and CORS policy. Reference: Using Adapter Inbound Security - SAP Learning, Set Up Inbound OAuth Client Credentials Grant Authentication for Senders Calling Integration Flows with SAP-Generated Certificate | SAP Tutorials

#### NEW QUESTION # 23

Which Sap platform serves as the foundation for SAP' s integration strategy?

- **A. SAP Business Technology Platform (SAP BTP).**
- B. SAP Netweaver Process Integration (PI) serves as the foundation for SAP' s integration strategy.
- C. SAP S/4HANA serves as the foundation for SAP' s integration strategy.
- D. SAP Cloud Platform Integration (CPI) serves as the foundation for SAP' s integration strategy.

**Answer: A**

Explanation:

SAP's integration strategy is founded on the SAP Business Technology Platform (BTP), which provides:

Integration Suite as the strategic iPaaS for process, data, API, and event-driven integration.

Extension Suite for app extensions.

Database & Data Management for unified data access.

Analytics & AI capabilities.

Other options:

SAP CPI # Now part of Integration Suite, not the overall foundation.

SAP S/4HANA # The digital core ERP, but not the integration platform.

SAP NetWeaver PI/PO # Legacy middleware, replaced strategically by Integration Suite on BTP.

Thus, the foundation of SAP's integration strategy is SAP BTP.

#### NEW QUESTION # 24

What can you use to prevent overload in an OData request and reply call?

- A. HTTP adapter
- B. Stop parameter
- C. Query filter
- **D. Paging**

**Answer: D**

Explanation:

To prevent overload in an OData request and reply call, you can use paging. Paging is a technique that allows you to retrieve a large number of data sets in smaller chunks or pages. You can use the OData query options \$top and \$skip to specify how many records
