DEA-C02 Discount Code | Reliable DEA-C02 Test Blueprint

If you are looking to advance in the fast-paced and technological world, Snowflake is here to help you achieve this aim. Snowflake provides you with the excellent SnowPro Advanced: Data Engineer (DEA-C02) practice exam, which will make your dream come true of passing the Snowflake DEA-C02 Certification Exam.

After undergoing a drastic change over these years, our DEA-C02 actual exam have been doing perfect job in coping with the exam. Up to now our DEA-C02 practice materials account for 60 percent of market share in this line for their efficiency and accuracy when dealing with the exam. With the best reputation in the market our DEA-C02 Training Materials can help you ward off all unnecessary and useless materials and spend all your limited time on practicing most helpful questions.

Reliable DEA-C02 Test Blueprint - Valid DEA-C02 Study Materials

Desktop SnowPro Advanced: Data Engineer (DEA-C02) (DEA-C02) practice test software is the first format available at TroytecDumps. This format can be easily used on Windows PCs and laptops. The Snowflake DEA-C02 practice exam software works without an internet connection, with the exception of license verification. One of the excellent features of this SnowPro Advanced: Data Engineer (DEA-C02) (DEA-C02) desktop-based practice test software is that it includes multiple mock tests that have Snowflake DEA-C02 practice questions identical to the actual exam, providing users with a chance to get SnowPro Advanced: Data Engineer (DEA-C02) (DEA-C02) real exam experience before even attempting it.

Snowflake SnowPro Advanced: Data Engineer (DEA-C02) Sample Questions (Q323-Q328):

NEW QUESTION # 323
You need to create a development environment from a production schema called 'PRODUCTION SCHEMA. You decide to clone the schema'. Which of the following statements are correct regarding the impact of cloning a schema in Snowflake? (Select all that

apply)

- A. Sequences in the cloned schema will continue from where they left off in the original 'PRODUCTION SCHEMA' if no operations are performed on sequence object, if the sequence is updated after cloning then these sequences are fully independent.
- B. Cloned schemas consume twice the storage as the source schema immediately after cloning as the underlying data is duplicated.
- C. Cloning a schema automatically clones all tasks and streams associated with tables in the schema but only if the clone is executed at the Database Level.
- D. External tables are also cloned when cloning a schema, but the underlying data files in cloud storage are not duplicated.
- E. All tables, views, and user-defined functions (UDFs) within the 'PRODUCTION_SCHEMX will be cloned to the new development schema.

Answer: A,D,E

Explanation:
Cloning a schema clones all objects within it (tables, views, UDFs, etc.). Cloning uses metadata cloning initially, so it doesn't immediately duplicate the data. Sequences resume from where they left off (if not used cloned schema). Tasks and streams are not cloned when cloning a schema, unless the clone is done at the database level. External tables are cloned, but the data files remain in their original cloud storage location.

NEW QUESTION # 324

You are troubleshooting a slowly performing query in Snowflake that aggregates data from a large ORDERS table (10 billion rows) partitioned by ORDER DATE. The query execution plan shows significant 'Remote Spill to Disk'. Which of the following actions would be MOST effective in reducing the spill and improving query performance? Assume all statistics are up-to-date and the data is properly clustered by ORDER_DATE.

- A. Optimize the query to leverage data pruning based on ORDER DATE by ensuring the query filters on a specific or limited range of ORDER DATE values.
- B. Rewrite the query to use window functions instead of aggregate functions.
- C. Reduce the number of columns selected in the query, only selecting those that are essential for the aggregation.
- D. Increase the value of the parameter. This allows the warehouse to scale up further if needed.
- E. Increase the virtual warehouse size. This will provide more memory for the query to execute.

Answer: A

Explanation:
Remote Spill to Disk indicates that Snowflake is running out of memory to process the query. Increasing the virtual warehouse size (A) can help, but focusing on data pruning (E) is often more effective. By filtering on ORDER_DATE, you drastically reduce the amount of data that needs to be processed, minimizing memory usage and the need to spill to disk. Options B, C, and D are less likely to directly address the spill issue. doesn't exist. Window functions don't inherently resolve spills. Reducing selected columns can help slightly but is usually less impactful than data pruning.

NEW QUESTION # 325

A data engineer is responsible for a Snowflake data pipeline that ingests data from multiple external sources, transforms it, and loads it into a data warehouse. The engineer needs to implement a notification system to alert them when specific data quality issues occur, such as data duplication exceeding a threshold or a sudden drop in data volume. Which approach offers the MOST flexible and scalable solution for implementing these notifications?

- A. Use Snowflake's built-in resource monitors to track data volume and configure alerts based on predefined thresholds. This approach is simple but limited in its ability to detect complex data quality issues.
- B. Develop custom SQL scripts to periodically query the data for quality issues and send email notifications using Snowflake's stored procedures and the 'EMAIL' external function.
- C. Create a series of Snowflake Tasks that execute SQL queries to check for data quality issues. If an issue is detected, the task triggers an external function to send a notification to a messaging service (e.g., AWS SNS, Azure Event Grid).
- D. Rely solely on Snowflake's Data Sharing feature to share the data with a data quality team who will manually review the data and report any issues.
- E. Implement a data quality monitoring tool that integrates with Snowflake via JDBC/ODBC and uses its own rules engine and notification system to detect and alert on data quality issues.

Answer: C,E

Explanation:
Options C and D provide the most flexible and scalable solutions. Using a dedicated data quality monitoring tool (C) offers a comprehensive solution with a rules engine and notification system. Option D allows for a modular and scalable approach where individual tasks check for specific data quality issues and trigger notifications via external functions. Option A is too limited. Option B lacks scalability and maintainability compared to dedicated tools or task-based solutions. Option E is a manual and inefficient approach.

NEW QUESTION # 326
A company stores raw clickstream data in AWS S3. They need to query this data occasionally (less than once per day) for ad-hoc analysis and auditing purposes without ingesting it into Snowflake. Which of the following approaches is MOST suitable and cost-effective, and which considerations regarding data freshness are crucial?

- A. Create an external table pointing directly to the S3 bucket. The data freshness depends on the automatic refresh enabled using the object. Ensure a metadata notification service (e.g., SQS) is configured to trigger the metadata refresh whenever new files are added to S3.
- B. Create an internal stage in Snowflake and regularly copy the data from S3 into the internal stage using a Snowpipe. Query the data in the internal stage. Data freshness depends on the Snowpipe configuration.
- C. Create an external table pointing directly to the S3 bucket. The data freshness depends on manually refreshing the metadata using 'ALTER EXTERNAL TABLE ... REFRESH'. Automate this refresh with a scheduled task.
- D. Create an external table pointing directly to the S3 bucket. Data freshness is automatically maintained by Snowflake whenever the external table is queried. No additional configuration is required.
- E. Load the data into a Snowflake table using COPY INTO and schedule a daily task to refresh the table. Data freshness is guaranteed by the scheduled task.

Answer: A

Explanation:
External tables are ideal for infrequent queries of data residing in external storage. The 'EVENT_TABLE object provides an automatic refresh, but requires the setup of a notification service to trigger the refresh when new files are written to S3. Manually refreshing the metadata with "ALTER EXTERNAL TABLE ... REFRESH' is also a valid approach, but requires manual intervention or scheduling. Data freshness is NOT automatically maintained; a metadata refresh is REQUIRED.

NEW QUESTION # 327
You accidentally truncated a large table named 'SALES DATA' in your 'REPORTING DB" database. You realize this happened 2 days ago, and your account has the default Time Travel retention of 1 day. You need to recover this table with minimal downtime. Analyze the situation and determine the best course of action, considering cost and recovery time.

- A. Raise a support ticket requesting data recovery from failsafe. Since data retention period has expired.
- B. Immediately contact Snowflake Support to initiate a restore from Fail-safe, understanding that this process may take several hours or even days.
- C. Create a clone of the table using the 'AT clause and a timestamp from 1 day ago. This would prevent any additional cost.
- D. Because the data retention period has expired, the table is unrecoverable using Snowflake's built-in features; you must restore from an external backup solution if available.
- E. Increase the account-level to 2 days and then use the UNDROP TABLE SALES_DATA' command.

Answer: B

Explanation:
Since the Time Travel window (1 day) has passed, the 'UNDROP' command and cloning using or 'BEFORE clauses will not work (eliminating options B and D). While option C might be true if no external backups exist, the most appropriate first step is to contact Snowflake support (option A). This is because, even though Time Travel has expired, Fail-safe might still contain the data, offering a potential recovery path, although it is a longer process and not guaranteed. Option E is also a valid answer.

NEW QUESTION # 328
......

When you are preparing DEA-C02 practice exam, it is necessary to grasp the overall knowledge points of real exam by using the latest DEA-C02 pass guide. Our experts written the accurate DEA-C02 test answers for exam preparation and created the study guideline for our candidates. We promise you will get high passing mark with our valid DEA-C02 Exam Torrent and your money will be back to your account if you failed exam with our study materials.

Reliable DEA-C02 Test Blueprint: https://www.troytecdumps.com/DEA-C02-troytec-exam-dumps.html

Safe and Secure, So come to buy our DEA-C02 test torrent, it will help you pass your DEA-C02 exam and get the certification in a short time that you long to own, And you have the right to enjoy one year free update of the DEA-C02 training questions, They check the updating of DEA-C02 training vce torrent every day to ensure the accuracy of questions and answers, The DEA-C02 free download vce ensures people whoever is rich or poor have an equal access to this kind of useful resources.

Setting Wallpaper on Your Handset, New tools DEA-C02 are provided for debugging double-precision programs, Safe and Secure, So come to buy our DEA-C02 Test Torrent, it will help you pass your DEA-C02 exam and get the certification in a short time that you long to own.

2026 High Pass-Rate 100% Free DEA-C02 – 100% Free Discount Code | Reliable DEA-C02 Test Blueprint

And you have the right to enjoy one year free update of the DEA-C02 training questions, They check the updating of DEA-C02 training vce torrent every day to ensure the accuracy of questions and answers.

The DEA-C02 free download vce ensures people whoever is rich or poor have an equal access to this kind of useful resources.
