Cloud-Digital-Leader Valid Exam Simulator | Cloud-Digital-Leader Practice Online

The ITExamDownload offers valid, updated, and real Google Cloud Digital Leader Cloud-Digital-Leader exam practice questions that perfectly and quickly prepare the Cloud-Digital-Leader exam candidates. You can easily pass the challenging Google Cloud Digital Leader Cloud-Digital-Leader Certification Exam. Cloud-Digital-Leader exam practice test questions you will get everything that you need to learn, prepare and pass the valuable Cloud-Digital-Leader certification with good scores.

Google Cloud Digital Leader Sample Questions (Q341-Q346):

NEW QUESTION # 341
As your organization increases its release velocity, the VM-based application upgrades take a long time to perform rolling updates due to OS boot times. You need to make the application deployments faster.
What should your organization do?

- A. Migrate your VMs to the cloud, and add more resources to them
- B. Automate your upgrade rollouts
- C. Increase the resources of your VMs
- D. Convert your applications into containers

Answer: B

NEW QUESTION # 342
In terms of Infrastructure as a Service (IaaS) what are the benefits of it?

- A. IaaS offers virtually infinite flexibility and scalability, enterprises can get their work done more efficiently, ensuring faster development life cycles.
- B. IaaS resources are used on demand and enterprises only have to pay for the compute, storage, and networking resources that are actually used, IaaS costs are fairly predictable and can be easily contained and budgeted for.
- C. All of the Above
- D. IaaS resources are regularly available to businesses when they need them. As a result, enterprises reduce delays when expanding infrastructure and, alternatively, don't waste resources by overbuilding capacity.

Answer: C

Explanation:
These are the feature of Infrastructure as a Service (IaaS)
It's economical
Because IaaS resources are used on demand and enterprises only have to pay for the compute, storage, and networking resources that are actually used, IaaS costs are fairly predictable and can be easily contained and budgeted for.
It's efficient
IaaS resources are regularly available to businesses when they need them. As a result, enterprises reduce delays when expanding infrastructure and, alternatively, don't waste resources by overbuilding capacity.
It boosts productivity
Because the cloud provider is responsible for setting up and maintaining the underlying physical infrastructure, enterprise IT departments save time and money and can redirect resources to more strategic activities.
It's reliable
IaaS has no single point of failure. Even if any one component of the hardware resources fails, the service will usually still remain available.
It's scalable
One of the biggest advantages of IaaS in cloud computing is the capability to scale the resources up and down rapidly according to the needs of the enterprise.
It drives faster time to market
Because IaaS offers virtually infinite flexibility and scalability, enterprises can get their work done more efficiently, ensuring faster development life cycles.

NEW QUESTION # 343
An organization is struggling to keep up with the growth of their application which is running on legacy infrastructure.
What might be holding them back?

- A. The inaccessibility of their data due to perimeter security
- B. The overreliance on platform as a service
- C. The time it takes their serverless compute function to scale
- D. The cost of provisioning hardware for peak usage

Answer: D

Explanation:
Explanation
Legacy infrastructure is typically based on on-premises hardware that is managed and maintained by the organization. As the application grows and the user base expands, the hardware required to support it must also grow. This can lead to significant costs associated with provisioning and maintaining hardware, particularly if the organization needs to provision for peak usage.

NEW QUESTION # 344

Considering Google Cloud Storage different Options which of the following is / are correct on the basis of their real world use cases?

- A. Google Cloud BigTable : AdTech, Financial and IoT Data.
- B. Cloud Storage : Images, Large Media, files , backups.
- C. Cloud SQL : User Credentials, customer orders.
- D. All of the Above.

Answer: D

Explanation:
Cloud Datastore is the best for semi-structured application data that is used in app engines' applications. Bigtable is best for analytical data with heavy read/write events like AdTech, Financial or IoT data. Cloud Storage is best for structured and unstructured, binary or object data like images, large media files and backups. SQL is best for web frameworks and in existing applications like storing user credentials and customer orders. Cloud Spanner is best for large scale database applications that are larger than two terabytes; for example, for financial trading and e-commerce use cases. As I mentioned at the beginning of the module, depending on your application, you might use one or several of these services to get the job done.

NEW QUESTION # 345

An organization wants to scale their existing virtual machine architecture as quickly as possible. Why should the organization use VMware Engine?

- A. To archive virtual machine instances.
- B. To deploy custom APIs seamlessly.
- C. To replatform virtual machines as they are.
- D. To migrate virtual machines to containers.

Answer: C

Explanation:
Explanation
VMware Engine helps migrate and run virtual machines in Google Cloud with minimal changes to the VM architecture.
Table Description automatically generated with medium confidence
