Axis Network Video Exam Sample Questions (Q53-Q58):

NEW QUESTION # 53
When using HTTPS on Axis products, true security is implemented after the

- A. Signed certificate is installed.
- B. 64 character password is in place.
- C. MAC address filtering is activated.
- D. 256 character password is in place.

Answer: A

Explanation:
True security when using HTTPS on Axis products is implemented after a signed certificate is installed. This certificate ensures that the communication between the camera and the server is encrypted and authenticated, providing a secure channel that prevents unauthorized access and tampering.

NEW QUESTION # 54
Which technology can add audio and I/O functionality to a camera?

- A. IEEE 802.1X
- B. Zipstream
- C. i.264
- D. Portcast

Answer: D

Explanation:
Portcast technology can add audio and I/O functionality to a camera. It allows for the integration of additional functionalities such as audio inputs and outputs, as well as input/output ports for various sensors and devices.
This feature enhances the capabilities of the camera beyond just video recording. This information is corroborated by Axis Communications' technical documentation and product guides.

NEW QUESTION # 55
The capability to view and record up to four different areas of the whole image of an AXIS P1346 is called

- A. Multi-view streaming.
- B. Broadcast streaming.
- C. Multi-link streaming.
- D. Multicast streaming.

Answer: A

Explanation:
The capability to view and record up to four different areas of the whole image of an AXIS P1346 camera is called Multi-view streaming. This feature allows multiple cropped views to be created from a single high-resolution video stream, enabling more efficient use of bandwidth and storage while focusing on specific areas of interest within the full image. For more information, refer to the Axis Communications product documentation and technical notes on Multi-view streaming capabilities.

NEW QUESTION # 56
An installation with an AXIS P1344 experiences image flickering. How can this be remedied?

- A. Changing the camera's exposure setting
- B. Adding IR light to the scene
- C. Changing the camera's white balance
- D. Adding white light to the scene

Answer: A

Explanation:

Image flickering on an AXIS P1344 can often be attributed to the camera's exposure settings. Flickering is usually caused by lighting conditions that fluctuate at a frequency different from the camera's current exposure settings, leading to the perception of flicker. Adjusting the exposure settings can synchronize the camera with the lighting conditions, thus reducing or eliminating the flickering issue. This can be done by accessing the camera's web interface and navigating to the image settings to adjust the exposure mode or exposure value. According to Axis Communications' product documentation, fine-tuning the exposure settings is a recommended step to mitigate flickering.

NEW QUESTION # 57

A customer has a lot of motion blur on recordings from a fixed camera. What would be the most likely setting to address the blurring?

- A. Gain level
- B. Brightness
- C. Backlight compensation
- D. Shutter speed

Answer: D
