

Test ARA-C01 Questions Vce, ARA-C01 Download Pdf

DOWNLOAD the newest Actual4Dumps ARA-C01 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1I9v2GiY5xkvo7WYYTn5p9d7bBqkwUi4Z>

Actual SnowPro Advanced Architect Certification (ARA-C01) dumps are designed to help applicants crack the Central Finance in ARA-C01 test in a short time. There are dozens of websites that offer ARA-C01 exam questions. But all of them are not trustworthy. Some of these platforms may provide you with SnowPro Advanced Architect Certification (ARA-C01) invalid dumps. Upon using outdated Central Finance in ARA-C01 dumps you fail in the ARA-C01 test and lose your resources. Therefore, it is indispensable to choose a trusted website for real Central Finance in ARA-C01 dumps.

The SnowPro Advanced Architect Certification exam is an online, proctored exam that consists of 60 multiple-choice questions. ARA-C01 exam content is designed to test the candidate's knowledge of the Snowflake platform and its various features. ARA-C01 exam is timed, and candidates have two hours to complete it. SnowPro Advanced Architect Certification certification is a globally recognized certification, and it allows professionals to showcase their expertise in Snowflake's cloud data platform.

Snowflake ARA-C01 Exam is a certification exam designed for advanced Snowflake architects who want to demonstrate their expertise in designing and implementing Snowflake solutions. ARA-C01 exam is designed to test the candidate's knowledge of Snowflake architecture, implementation, and best practices. Passing ARA-C01 exam is a great achievement that demonstrates a high level of technical expertise in Snowflake and can open doors to new career opportunities.

ARA-C01 Download Pdf & Valid Test ARA-C01 Tips

Many clients may worry that if they buy our product they will fail in the exam but we guarantee to you that our ARA-C01 study questions are of high quality and can help you pass the exam easily and successfully. Our product boosts 99% passing rate and high hit rate so you needn't worry that you can't pass the exam. Our ARA-C01 exam torrent is compiled by experts and approved by experienced professionals and updated according to the development situation in the theory and the practice. Our SnowPro Advanced Architect Certification guide torrent can simulate the exam and boosts the timing function. The language is easy to be understood and makes the learners have no learning obstacles. So our ARA-C01 Exam Torrent can help you pass the exam with high possibility.

Snowflake ARA-C01 Certification Exam has a reputation for being one of the most challenging Snowflake certification exams. It requires a deep understanding of Snowflake architecture and features, as well as a strong ability to apply that knowledge to complex real-world scenarios. However, earning this certification can be a significant boost to a professional's career, as it demonstrates their expertise in architecting Snowflake solutions at an advanced level.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q157-Q162):

NEW QUESTION # 157

Which organization-related tasks can be performed by the ORGADMIN role? (Choose three.)

- A. Changing the name of the organization
- **B. Creating an account**
- C. Deleting an account
- **D. Enabling the replication of a database**
- **E. Viewing a list of organization accounts**
- F. Changing the name of an account

Answer: B,D,E

Explanation:

According to the SnowPro Advanced: Architect documents and learning resources, the organization-related tasks that can be performed by the ORGADMIN role are:

Creating an account in the organization. A user with the ORGADMIN role can use the CREATE ACCOUNT command to create a new account that belongs to the same organization as the current account¹.

Viewing a list of organization accounts. A user with the ORGADMIN role can use the SHOW ORGANIZATION ACCOUNTS command to view the names and properties of all accounts in the organization². Alternatively, the user can use the Admin Accounts page in the web interface to view the organization name and account names³.

Enabling the replication of a database. A user with the ORGADMIN role can use the SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER function to enable database replication for an account in the organization. This allows the user to replicate databases across accounts in different regions and cloud platforms for data availability and durability⁴.

The other options are incorrect because they are not organization-related tasks that can be performed by the ORGADMIN role.

Option A is incorrect because changing the name of the organization is not a task that can be performed by the ORGADMIN role.

To change the name of an organization, the user must contact Snowflake Support³. Option D is incorrect because changing the name of an account is not a task that can be performed by the ORGADMIN role. To change the name of an account, the user must contact Snowflake Support⁵. Option E is incorrect because deleting an account is not a task that can be performed by the ORGADMIN role. To delete an account, the user must contact Snowflake Support. NEW QUESTION # 158

You have created a reader account for sharing data. who will pay for the compute usage of the account

- **A. Provider**
- B. Consumer

Answer: A

NEW QUESTION # 159

A company is following the Data Mesh principles, including domain separation, and chose one Snowflake account for its data platform.

An Architect created two data domains to produce two data products. The Architect needs a third data domain that will use both of the data products to create an aggregate data product. The read access to the data products will be granted through a separate role. Based on the Data Mesh principles, how should the third domain be configured to create the aggregate product if it has been granted the two read roles?

- A. Create a hierarchy between the two read roles.
- B. Use secondary roles for all users.
- C. Request a technical ETL user with the sysadmin role.
- **D. Request that the two data domains share data using the Data Exchange.**

Answer: D

Explanation:

In the scenario described, where a third data domain needs access to two existing data products in a Snowflake account structured according to Data Mesh principles, the best approach is to utilize Snowflake's Data Exchange functionality. Option D is correct as it facilitates the sharing and governance of data across different domains efficiently and securely. Data Exchange allows domains to publish and subscribe to live data products, enabling real-time data collaboration and access management in a governed manner. This approach is in line with Data Mesh principles, which advocate for decentralized data ownership and architecture, enhancing agility and scalability across the organization. References:

NEW QUESTION # 160

An Architect has a VPN_ACCESS_LOGS table in the SECURITY_LOGS schema containing timestamps of the connection and disconnection, username of the user, and summary statistics.

What should the Architect do to enable the Snowflake search optimization service on this table?

- **A. Assume role with OWNERSHIP on VPN_ACCESS_LOGS and ADD SEARCH OPTIMIZATION in the SECURITY_LOGS schema.**
- B. Assume role with OWNERSHIP on future tables and ADD SEARCH OPTIMIZATION on the SECURITY_LOGS schema.
- C. Assume role with ALL PRIVILEGES on VPN_ACCESS_LOGS and ADD SEARCH OPTIMIZATION in the SECURITY_LOGS schema.
- D. Assume role with ALL PRIVILEGES including ADD SEARCH OPTIMIZATION in the SECURITY LOGS schema.

Answer: A

Explanation:

According to the SnowPro Advanced: Architect Exam Study Guide, to enable the search optimization service on a table, the user must have the ADD SEARCH OPTIMIZATION privilege on the table and the schema. The privilege can be granted explicitly or inherited from a higher-level object, such as a database or a role. The OWNERSHIP privilege on a table implies the ADD SEARCH OPTIMIZATION privilege, so the user who owns the table can enable the search optimization service on it. Therefore, the correct answer is to assume a role with OWNERSHIP on VPN_ACCESS_LOGS and ADD SEARCH OPTIMIZATION in the SECURITY_LOGS schema. This will allow the user to enable the search optimization service on the VPN_ACCESS_LOGS table and any future tables created in the SECURITY_LOGS schema. The other options are incorrect because they either grant excessive privileges or do not grant the required privileges on the table or the schema. Reference:

SnowPro Advanced: Architect Exam Study Guide, page 11, section 2.3.1

Snowflake Documentation: Enabling the Search Optimization Service

NEW QUESTION # 161

Assuming all Snowflake accounts are using an Enterprise edition or higher, in which development and testing scenarios would be copying of data be required, and zero-copy cloning not be suitable? (Select TWO).

- **A. Data is in a production Snowflake account that needs to be provided to Developers in a separate development/testing**

Snowflake account in the same cloud region.

- B. The release process requires pre-production testing of changes with data of production scale and complexity. For security reasons, pre-production also runs in the production account.
- C. Production and development run in different databases in the same account, and Developers need to see production-like data but with specific columns masked.
- D. Developers create their own datasets to work against transformed versions of the live data.
- E. Developers create their own copies of a standard test database previously created for them in the development account, for their initial development and unit testing.

Answer: A,C

Explanation:
