## CompTIA A+ Certification Exam: Core 2 Sample Questions (Q201-Q206):

### NEW QUESTION # 201

A technician is preparing to replace the batteries in rack-mounted UPS system. After ensuring the power is turned off and the batteries are fully discharged, the technician needs to remove the battery modules from the bottom of the rack. Which of the following steps should the technician take?

- A. Place the removed batteries in an antistatic bag.
- **B. Use appropriate lifting techniques and guidelines.**
- C. Wear a face mask to filter out any harmful fumes.
- D. Ensure the fire suppression system is ready to be activated.

**Answer: B**

Explanation:

UPS battery modules are heavy and awkward; employing proper lifting techniques (e.g., lifting with the legs, keeping the back straight, and using team lifts or mechanical aids as necessary) prevents musculoskeletal injuries and ensures safe removal.

### NEW QUESTION # 202

A support specialist needs to decide whether to install a 32-bit or 64-bit OS architecture on a new computer. Which of the following specifications will help the specialist determine which OS architecture to use?

- A. 16GB RAM
- B. 500GB HDD
- C. Intel i7 CPU
- D. 1Gbps Ethernet

**Answer: A**

Explanation:

The amount of installed RAM is the key factor in determining whether a 64-bit OS is needed. A 32-bit operating system cannot effectively address more than 4GB of RAM. Since this system has 16GB of RAM, a 64-bit OS is required to utilize the full memory.

B). An Intel i7 CPU supports both 32-bit and 64-bit OS installations, so it alone doesn't determine the need.

C). HDD size does not influence OS architecture selection.

D). Ethernet speed is a network consideration and not related to OS architecture.

- B. macOS
- C. Linux
- D. Chrome OS

B: Windows requires per-device or per-user licensing for both workstation and server editions.

C: macOS is proprietary and limited to Apple hardware with licensing restrictions.

D: Chrome OS is designed for lightweight devices and lacks server functionality.

### NEW QUESTION # 204

A technician installs VPN client software that has a software bug from the vendor. After the vendor releases an update to the software, the technician attempts to reinstall the software but keeps getting an error message that the network adapter for the VPN already exists. Which of the following should the technician do next to mitigate this issue?

- A. Run the latest OS security updates.
- B. Update the network adapter's firmware.
- C. Map the network adapter to the new software.

- **D. Delete hidden network adapters.**

**Answer: D**

Explanation:

VPN clients often create virtual network adapters. If the software wasn't uninstalled properly or crashed during install, leftover (often hidden) virtual adapters can prevent reinstallation. The proper solution is to delete hidden network adapters using Device Manager (with "Show hidden devices" enabled).

- A). OS updates won't fix a leftover driver or adapter issue.
- B). Mapping an adapter to the software is not a standard or viable solution.
- C). Firmware updates apply to physical adapters, not virtual VPN adapters.

- B. ISO
