More and more people look forward to getting the Mule-Dev-301 certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the exam and get the Salesforce related certification. If you want to get the related certification in an efficient method, please choose the Mule-Dev-301 learning dumps from our company. We can guarantee that the study materials from our company will help you pass the exam and get the certification in a relaxed and efficient method.

Salesforce Certified MuleSoft Developer II Sample Questions (Q30-Q35):

NEW QUESTION # 30

A custom policy needs to be developed to intercept all outbound HTTP requests made by Mule applications. Which XML element must be used to intercept outbound HTTP requests?

- A. `http-policy:source`
- B. `http-policy:processor`

- C. It is not possible to intercept outgoing HTTP requests, only inbound requests
- D. http-policy:operation

Answer: A

Explanation:

The http-policy:processor element is used to intercept outbound HTTP requests made by Mule applications. It allows customizing the request before it is sent to the target API and modifying the response after it is received from the target API. Reference: <https://docs.mulesoft.com/api-manager/2.x/policy-mule4-custom-policy#policy-xml-file>

NEW QUESTION # 31

Mule application A is deployed to CloudHub and is using Object Store v2. Mule application B is also deployed to CloudHub. Which approach can Mule application B use to remove values from Mule application A'S Object Store?

- A. Object Store Connector
- **B. Object Store v2 REST API**
- C. CloudHub REST API
- D. CloudHub Connector

Answer: B

Explanation:

To remove values from Mule application A's Object Store v2, Mule application B can use Object Store v2 REST API. This API allows performing operations on Object Store v2 resources using HTTP methods, such as GET, POST, PUT, and DELETE. Mule application B can use the DELETE method to remove values from Mule application A's Object Store v2 by specifying the object store ID and the key of the value to delete. Reference: <https://docs.mulesoft.com/object-store/osv2-apis>

NEW QUESTION # 32

Which pattern can a web API use to notify its client of state changes as soon as they occur?

- A. Schedule Event Publisher
- **B. HTTP Webhook**
- C. Shared database trigger
- D. ETL data load

Answer: B

Explanation:

A web API can use HTTP Webhook to notify its client of state changes as soon as they occur. A webhook is an HTTP callback that allows an API to send real-time notifications to another system or application when an event happens. The client registers a URL with the API where it wants to receive notifications, and then the API sends an HTTP request to that URL with information about the event. Reference: <https://docs.mulesoft.com/connectors/webhook/webhook-connector>

NEW QUESTION # 33

A company has been using CI/CD. Its developers use Maven to handle build and deployment activities. What is the correct sequence of activities that takes place during the Maven build and deployment?

- A. Validate, initialize, compile, package, test, install, verify, verify, deploy
- **B. Validate, initialize, compile, test package, verify, install, deploy**
- C. Validation, initialize, compile, test, package, install verify, deploy
- D. Initialize, validate, compute, test, package, verify, install, deploy

Answer: B

Explanation:

The correct sequence of activities that takes place during the Maven build and deployment is validate, initialize, compile, test package, verify, install, deploy. These are Maven lifecycle phases that define a sequence of goals to execute during a build process. Each phase represents a stage in the build lifecycle and can have zero or more goals bound to it. Reference:

NEW QUESTION # 34

The HTTP Request operation raises an HTTP CONNECTIVITY error.

Which HTTP status code and body are returned to the web client?

□

- A. HTTP Status Code:200.
Body 'Error in processing your request'
- B. HTTP Status Code:500.
Body 'Error in processing your request'
- C. HTTP Status Code:500.
Body 'The HTTP CONNECTIVITY Error description'
- D. HTTP Status Code:500.
Body 'Error in processing your request'

Answer: B

Explanation:

When the HTTP Request operation raises an HTTP CONNECTIVITY error, it triggers an on-error-continue handler that sets a payload with 'Error in processing your request'. Since no status code is explicitly set in this handler, it defaults to 500 (INTERNAL SERVER ERROR). Therefore, the web client receives an HTTP response with status code 500 and body 'Error in processing your request'. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/error-handling#on-error-continue>

NEW QUESTION # 35

.....

The TrainingQuiz wants you make your Salesforce Mule-Dev-301 exam questions preparation journey simple, smart, and successful.
