## Quiz Splunk - Useful SPLK-2002 - Updated Splunk Enterprise Certified Architect Dumps

Different from other similar education platforms, the SPLK-2002 quiz guide will allocate materials for multi-plate distribution, rather than random accumulation without classification. How users improve their learning efficiency is greatly influenced by the scientific and rational design and layout of the learning platform. The Splunk Enterprise Certified Architect prepare torrent is absorbed in the advantages of the traditional learning platform and realize their shortcomings, so as to develop the SPLK-2002 test material more suitable for users of various cultural levels. If just only one or two plates, the user will inevitably be tired in the process of learning on the memory and visual fatigue, and the SPLK-2002 test material provided many study parts of the plates is good enough to arouse the enthusiasm of the user, allow the user to keep attention of highly concentrated.

The SPLK-2002 Exam consists of 100 multiple-choice questions that cover several areas of Splunk Enterprise architecture. SPLK-2002 exam is designed to test the candidate's understanding of various aspects of Splunk, including data input, search processing, data visualization, and deployment architecture. SPLK-2002 exam is also designed to test the candidate's troubleshooting skills and their ability to optimize Splunk performance.

Splunk SPLK-2002 (Splunk Enterprise Certified Architect) Certification Exam is a challenging and comprehensive exam that tests the knowledge and skills of candidates in designing and deploying complex Splunk Enterprise environments. Splunk Enterprise Certified Architect certification is intended for experienced Splunk users who have already earned the Splunk Certified Administrator certification and want to demonstrate their expertise in architecting Splunk deployments that meet the needs of their organizations.

## Splunk Enterprise Certified Architect Sample Questions (Q184-Q189):

#### NEW QUESTION # 184

When adding or rejoining a member to a search head cluster, the following error is displayed:  
Error pulling configurations from the search head cluster captain; consider performing a destructive configuration resync on this search head cluster member.  
What corrective action should be taken?

- A. Run the clean raftcommand on all members of the search head cluster.
- B. Run the splunk resync shcluster-replicated-configcommand on this member.
- **C. Run the splunk apply shcluster-bundlecommand from the deployer.**
- D. Restart the search head.

**Answer: C**

#### NEW QUESTION # 185

Which Splunk tool offers a health check for administrators to evaluate the health of their Splunk deployment?

- **A. Monitoring Console**
- B. SPL Clinic
- C. DiagGen
- D. btool

**Answer: A**

Explanation:

The Monitoring Console is the Splunk tool that offers a health check for administrators to evaluate the health of their Splunk deployment. The Monitoring Console provides dashboards and alerts that show the status and performance of various Splunk components, such as indexers, search heads, forwarders, license usage, and search activity. The Monitoring Console can also run health checks on the deployment and identify any issues or recommendations. The btool is a command-line tool that shows the effective settings of the configuration files, but it does not offer a health check. The DiagGen is a tool that generates diagnostic snapshots of the Splunk environment, but it does not offer a health check. The SPL Clinic is a tool that analyzes and optimizes SPL queries, but it does not offer a health check. For more information, see About the Monitoring Console in the Splunk documentation.

#### NEW QUESTION # 186

To reduce the captain's work load in a search head cluster, what setting will prevent scheduled searches from running on the captain?

- **A. captain\_is\_adhoc\_searchhead = true(on the current captain)**
- B. adhoc\_searchhead = true(on all members)
- C. captain\_is\_adhoc\_searchhead = true(on all members)
- D. adhoc\_searchhead = true(on the current captain)

**Answer: A**

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/Splunk/7.3.1/DistSearch/Adhocclustermember>

#### NEW QUESTION # 187

Which two sections can be expanded using the Search Job Inspector?

- **A. Optimization suggestions.**
- B. Execution costs.
- **C. Search job properties.**
- D. Saved search history.

**Answer: A,C**

Explanation:

The Search Job Inspector can be used to expand the following sections: Search job properties and Optimization suggestions. The

Search Job Inspector is a tool that provides detailed information about a search job, such as the search parameters, the search statistics, the search timeline, and the search log. The Search Job Inspector can be accessed by clicking the Job menu in the Search bar and selecting Inspect Job. The Search Job Inspector has several sections that can be expanded or collapsed by clicking the arrow icon next to the section name. The Search job properties section shows the basic information about the search job, such as the SID, the status, the duration, the disk usage, and the scan count. The Optimization suggestions section shows the suggestions for improving the search performance, such as using transforming commands, filtering events, or reducing fields. The Execution costs and Saved search history sections are not part of the Search Job Inspector, and they cannot be expanded. The Execution costs section is part of the Search Dashboard, which shows the relative costs of each search component, such as commands, lookups, or subsearches. The Saved search history section is part of the Saved Searches page, which shows the history of the saved searches that have been run by the user or by a schedule

### NEW QUESTION # 188

A three-node search head cluster is skipping a large number of searches across time. What should be done to increase scheduled search capacity on the search head cluster?

- A. Add another search head to the cluster.
- B. `server.conf captain_is_adhoc_searchhead = true`.
- C. Create a job server on the cluster.
- D. Change `limits.conf` value for `max_searches_per_cpu` to a higher value.

**Answer: D**

Explanation:

Changing the `limits.conf` value for `max_searches_per_cpu` to a higher value is the best option to increase scheduled search capacity on the search head cluster when a large number of searches are skipped across time.

This value determines how many concurrent scheduled searches can run on each CPU core of the search head.

Increasing this value will allow more scheduled searches to run at the same time, which will reduce the number of skipped searches.

Creating a job server on the cluster, running the `server.conf captain_is_adhoc_searchhead = true` command, or adding another search head to the cluster are not the best options to increase scheduled search capacity on the search head cluster. For more information, see

[Configure `limits.conf`] in the Splunk documentation.
