IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q44-Q49):

NEW QUESTION # 44

What is the main privacy threat posed by Radio Frequency Identification (RFID)?

- A. RFID can be utilized to read information from a device without the user's knowledge
- B. RFID can be utilized to spoof identification details
- **C. RFID can be utilized to track people or consumer products**
- D. RFID can be utilized to gain unauthorized access to an individual's device

Answer: C

Explanation:

the main privacy threat posed by Radio Frequency Identification (RFID) is that it can be utilized to track people or consumer products. RFID technology allows for wireless communication between tags and readers, which can be used to track the location and movement of tagged items.

NEW QUESTION # 45

Which of the following can be used to bypass even the best physical and logical security mechanisms to gain access to a system?

- A. Brute-force attacks.
- B. Denial of service.
- **C. Social engineering.**
- D. Phishing emails.

Answer: C

Explanation:

social engineering can be used to bypass even the best physical and logical security mechanisms to gain access to a system. Social engineering involves manipulating individuals into revealing sensitive information or performing actions that compromise security.

NEW QUESTION # 46

After stringent testing an organization has launched a new web-facing ordering system for its consumer medical products. As the medical products could provide indicators of health conditions, the organization could further strengthen its privacy controls by deploying?

- A. A content delivery network.
- B. Context aware computing.
- **C. Differential identifiability.**
- D. Run time behavior monitoring.

Answer: C

Explanation:

Differential identifiability is a method used to ensure that data cannot be re-identified to individual users, which is crucial when dealing with sensitive information like health conditions. This method can help strengthen privacy controls by applying mathematical techniques to anonymize data while preserving its utility for analysis.

Reference: IAPP CIPT Study Guide, "Anonymization and Pseudonymization Techniques," which explains differential privacy and identifiability as key measures for protecting sensitive data.

NEW QUESTION # 47

A BaaS provider backs up the corporate data and stores it in an outsider provider under contract with the organization. A researcher notifies the organization that he found unsecured data in the cloud. The organization looked into the issue and realized one of its backups was misconfigured on the outside provider's cloud and the data fully exposed to the open internet. They quickly secured the backup. Which is the best next step the organization should take?

- A. Review its contract with the outside provider.
- B. Investigate using alternate BaaS providers or on-premise backup systems.
- **C. Review the content of the data exposed.**
- D. Investigate how the researcher discovered the unsecured data.

Answer: C

Explanation:

After securing the misconfigured backup, the next best step for the organization is to review the content of the data that was exposed. This is crucial to assess the potential impact of the exposure, determine the sensitivity of the data, and identify any specific risks or compliance issues that may arise. Understanding the nature of the exposed data helps in making informed decisions about notification, mitigation, and further actions.

According to IAPP, this step is essential for evaluating the severity of the breach and preparing appropriate responses, including regulatory notifications and communication with affected parties if necessary.

NEW QUESTION # 48

Which of the following is an example of an appropriation harm?

- A government agency uses cameras to monitor your movements in a public area.
- **B. An unauthorized individual obtains access to your personal information and uses it for medical fraud.**
- C. A hacker gains access to your email account and reads your messages.
- D. A friend takes and uploads your pictures to a social media website.

Answer: B

Explanation:

Appropriation harms occur when someone's personal information is used without their consent, often for malicious purposes. An unauthorized individual obtaining access to personal information and using it for medical fraud is a clear example of appropriation harm because it involves the misuse of someone's personal data for fraudulent activities, potentially causing significant financial and personal damage to the victim. The IAPP emphasizes that appropriation harms are serious privacy violations that require stringent safeguards to protect individuals' personal data from unauthorized use.

NEW QUESTION # 49

• • • • •

Individuals who work with IAPP affiliations contribute the greater part of their energy working in their work spaces straightforwardly following accomplishing Certified Information Privacy Technologist (CIPT) certification. They don't get a lot of opportunity to spend on different exercises and regarding the IAPP CIPT Dumps, they need assistance to scrutinize accessible.
