

100% Pass Quiz 2026 Cisco Reliable Test CCST-Networking Pdf

BTW, DOWNLOAD part of TestSimulate CCST-Networking dumps from Cloud Storage: https://drive.google.com/open?id=1OOARovDC0tk8Av2YddAz1Tq3yFl_GzZA

By practicing our CCST-Networking exam braindumps, you will get the most coveted certificate smoothly. Before getting ready for your exam, having the ability to choose the best CCST-Networking practice materials is the manifestation of wisdom. Our CCST-Networking training engine can help you effectively pass the exam within a week. That is also proved that we are worldwide bestseller. Come and buy our CCST-Networking study dumps, you will get unexpected surprise.

TestSimulate provides you not only with the best materials and also with excellent service. If you buy TestSimulate questions and answers, free update for one year is guaranteed. So, you can always have the latest test materials. You fail, after you use our Cisco CCST-Networking Dumps, 100% guarantee to FULL REFUND. With it, what do you worry about? TestSimulate has a lot of confidence in our dumps and you also faith in our TestSimulate. In order to success, don't miss TestSimulate. If you miss TestSimulate, you will miss a chance to embrace the success.

Cert CCST-Networking Guide | CCST-Networking Reliable Test Testking

In the complicated and changeable information age, have you ever been tried hard to find the right training materials of CCST-Networking exam certification? We feel delighted for you to find TestSimulate, and more delighted to find the reliable CCST-Networking Exam Certification training materials. It will help you get your coveted CCST-Networking exam certification.

Cisco Certified Support Technician (CCST) Networking Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

Move each network type from the list on the left to the correct example on the right.

Answer:

Explanation:

Explanation:

- * Two home office computers are connected to a switch by Ethernet cables.
- * Network Type: LAN (Local Area Network)
- * Explanation: A LAN connects devices within a limited area such as a home, office, or building, using Ethernet cables or Wi-Fi.
- * Three government buildings in the same city connect to a cable company over coaxial cables.
- * Network Type: MAN (Metropolitan Area Network)
- * Explanation: A MAN connects networks across a city or campus, often using fiber optic or coaxial cables.
- * A cell phone connects to a Bluetooth headset.
- * Network Type: PAN (Personal Area Network)
- * Explanation: A PAN connects devices within a personal workspace, typically using wireless technologies like Bluetooth.
- * A financial institution connects its branches through a telecommunications service provider.
- * Network Type: WAN (Wide Area Network)
- * Explanation: A WAN connects multiple LANs over long distances, often using leased lines or satellite links provided by telecommunications companies.
- * LAN (Local Area Network): Used for connecting devices within a small geographical area such as a single building or home.
- * MAN (Metropolitan Area Network): Covers a larger geographical area than a LAN, typically a city or campus.
- * PAN (Personal Area Network): Connects devices within the range of an individual person, such as connecting a phone to a Bluetooth headset.
- * WAN (Wide Area Network): Spans large geographical areas, connecting multiple LANs across cities, countries, or continents.

NEW QUESTION # 39

You need to connect a computer's network adapter to a switch using a 1000BASE-T cable. Which connector should you use?

- A. RJ-45
- B. OS2 LC
- C. RJ-11
- D. Coax

Answer: A

Explanation:

- *1000BASE-T Cable: This refers to Gigabit Ethernet over twisted-pair cables (Cat 5e or higher).
- *Connector: RJ-45 connectors are used for Ethernet cables, including those used for 1000BASE-T.
- *Coax: Used for cable TV and older Ethernet standards like 10BASE2.
- *RJ-11: Used for telephone connections.
- *OS2 LC: Used for fiber optic connections.

References:

- *Ethernet Standards and Cables: Ethernet Cable Guide

NEW QUESTION # 40

Which two pieces of information should you include when you initially create a support ticket? (Choose 2.)

- A. The description of the top-down fault-finding procedure
- B. A description of the conditions when the fault occurs
- C. The actions taken to resolve the fault
- D. A detailed description of the fault
- E. Details about the computers connected to the network

Answer: B,D

Explanation:

- * Statement A: "A detailed description of the fault." This is essential for support staff to understand the nature of the problem and begin troubleshooting effectively.

- * Statement C: "A description of the conditions when the fault occurs." This helps in reproducing the issue and identifying patterns that might indicate the cause of the fault.
- * Statement B: "Details about the computers connected to the network." While useful, this is not as immediately critical as understanding the fault itself and the conditions under which it occurs.
- * Statement D: "The actions taken to resolve the fault." This is important but typically follows the initial report.
- * Statement E: "The description of the top-down fault-finding procedure." This is more of a troubleshooting methodology than information typically included in an initial support ticket.

- * Best Practices for Submitting Support Tickets: Support Ticket Guidelines

NEW QUESTION # 41

A host is given the IP address 172.16.100.25 and the subnet mask 255.255.252.0.
What is the CIDR notation for this address?

- A. 172.16.100.25 /20
- B. 172.16.100.25 /23
- C. 172.16.100.25 /21
- D. 172.16.100.25 /22

Answer: D

Explanation:

The CIDR (Classless Inter-Domain Routing) notation for the subnet mask 255.255.252.0 is /22. This notation indicates that the first 22 bits of the IP address are used for network identification, and the remaining bits are used for host addresses within the network.

References =

- * Subnet Cheat Sheet - 24 Subnet Mask, 30, 26, 27, 29, and other IP Address CIDR Network References
- * Subnet Mask to CIDR Notation: The given subnet mask is 255.255.252.0. To convert this to CIDR notation:
- * Convert the subnet mask to binary: 11111111.11111111.11111100.00000000
- * Count the number of consecutive 1s in the binary form: There are 22 ones.
- * Therefore, the CIDR notation is /22.

NEW QUESTION # 42

You want to list the IPv4 addresses associated with the host name www.companypro.net.
Complete the command by selecting the correct option from each drop-down list.

Answer:

Explanation:

Explanation:

To list the IPv4 addresses associated with the host name www.companypro.net, you should use the following command:
nslookup www.companypro.net

This command will query the DNS servers to find the IP address associated with the hostname provided. If you want to ensure that it returns the IPv4 address, you can specify the -type=A option, which stands for Address records that hold IPv4 addresses. However, the nslookup command by default should return the IPv4 address if available.

To list the IPv4 addresses associated with the host name www.companypro.net, you should use the nslookup command.

* Command: nslookup

* Target: www.companypro.net

So, the completed command is:

* nslookup www.companypro.net

* nslookup: This command is used to query the Domain Name System (DNS) to obtain domain name or IP address mapping or for any other specific DNS record.

* www.companypro.net: This is the domain name you want to query to obtain its associated IP addresses.
