## IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q85-Q90):

### NEW QUESTION # 85

Why is it crucial to understand the benefits of watsonx.data over traditional data warehouses?

- A. To limit scalability and flexibility
- B. To reduce data processing speed
- C. To leverage advanced analytics and machine learning capabilities
- D. To maximize data storage costs

**Answer: C**

### NEW QUESTION # 86

Which statement is true about Cloud Pak for Data SIEM integration?

- A. The Cloud Pak for Data Audit Logging Service explicitly supports the SIEM solutions: Splunk, QRadar, and Log360.
- B. If a connection to multiple SIEM systems has been established, the same method must be used to connect to each SIEM system.
- C. The Cloud Pak for Data Audit Logging Service uses Fluentd input streams to forward and export audit records.
- D. Auditing logging is supported by all Cloud Pak for Data components and services.

**Answer: C**

Explanation:

Cloud Pak for Data provides audit logging capabilities via the Audit Logging Service, which uses Fluentd to collect, process, and

forward log data to external SIEM solutions. Fluentd input streams are configured to export audit records in real time. While Splunk and QRadar are common integrations, Log360 is not explicitly listed in the official supported list. Each SIEM connection can be configured independently, and while audit logging is widely supported, it may not be enabled by default for every single service- therefore only option B is correct.

#### NEW QUESTION # 87

Which architectural consideration is crucial when deploying IBM Cloud Pak for Data on Red Hat OpenShift to ensure high availability?

#### NEW QUESTION # 89

How does the IBM Data Virtualization service virtualize files in shared directories?

- A. It scans its network for open file shares.
- B. Administrators configure FTP connections to the file source.
- **C. A remote connector is installed and run on the source server.**
- D. Users add shared file systems in the UI.

**Answer: C**

Explanation:

To virtualize files that reside in shared directories (e.g., NFS, SMB, or other on-premises sources), IBM Data Virtualization uses a remote connector agent. This remote connector is installed and executed on the source server to enable secure access and metadata extraction. The service does not scan networks automatically nor rely on FTP. Directly adding file shares via the UI is not sufficient without the backend connector in place, which acts as a secure communication bridge.
