

Latest C_CPI_2506 PDF Question by Exams4Collection

[Pass SAP C_CPI_2506 Exam](#) | [Latest C_CPI_2506 Dumps & Practice Exams - Cert007](#)

- B. Remove the namespaces.
- C. Convert the namespaces to XML.
- D. Remove the XML prolog.

Answer: B

Explanation:

If no namespace mapping exists, you must remove the namespaces to access individual entities of an HTTP call over XPath. Namespaces are prefixes that identify the source or context of an XML element or attribute. If the namespaces are not mapped to a URI, they can cause errors or conflicts when using XPath expressions. Therefore, you must remove the namespaces before applying XPath queries.

10.What are the maturity levels of the SAP Integration Solution Advisory Method-ology? Note: There are 2 answers to this question.

- A. Enable your integration structure.
- B. Design your hybrid integration platform.
- C. Assess your integration strategy
- D. Implement your integration architectural strategy.

Answer: B, C

Explanation:

The maturity levels of the SAP Integration Solution Advisory Methodology are as follows:

Assess your integration strategy. This level helps you evaluate your current integration landscape and identify the gaps and challenges that need to be addressed.

Design your hybrid integration platform. This level helps you define your target integration architecture and select the best-fit integration technologies and tools for your scenarios.

Implement your integration architectural strategy. This level helps you execute your integration projects and deliver value to your business.

Enable your integration structure. This level helps you establish a governance model and best practices for your integration operations and maintenance.

11.In the SAP Integration Suite, where can you change the virtual host name?

- A. Discover - APIs
- B. Design APIs
- C. Configure APIs
- D. Settings APIs

Answer: D

Explanation:

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS settings.

With Exams4Collection's SAP C_CPI_2506 exam training materials, you can get the latest SAP C_CPI_2506 exam questions and answers. It can make you pass the SAP C_CPI_2506 exam. SAP C_CPI_2506 exam certification can help you to develop your career. Exams4Collection's SAP C_CPI_2506 Exam Training materials is ensure that you fully understand the questions and issues behind the concept. It can help you pass the exam easily.

As we all know that, first-class quality always comes with the first-class service. There are also good-natured considerate after sales services offering help on our C_CPI_2506 study materials. All your questions about our C_CPI_2506 practice braindumps are deemed as prior tasks to handle. So if you have any question about our C_CPI_2506 Exam Quiz, just contact with us and we will help you immediately. That is why our C_CPI_2506 learning questions gain a majority of praise around the world.

Test your knowledge of the C_CPI_2506 exam dumps with SAP C_CPI_2506 practice questions. The software is designed to help with SAP Certified Associate - Integration Developer (C_CPI_2506) exam dumps preparation. SAP C_CPI_2506 Practice Test software can be used on devices that range from mobile devices to desktop computers.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 2	<ul style="list-style-type: none"> Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 3	<ul style="list-style-type: none"> SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 4	<ul style="list-style-type: none"> Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

SAP Certified Associate - Integration Developer Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which of the following can you use for an XSLT mapping in an integration flow?

- A. JSON
- B. XML**
- C. HTML
- D. PHP

Answer: B

Explanation:

To use an XSLT mapping in an integration flow, you must use XML as the input and output format. XSLT stands for Extensible Stylesheet Language Transformations, which is a language for transforming XML documents into other XML documents or other formats. An XSLT mapping consists of an XSLT stylesheet that defines the rules for transforming the source XML document into the target XML document. You can use an XSLT mapping step in an integration flow to apply an XSLT transformation to the message body. Reference: XSLT Mapping | SAP Help Portal, XSLT - W3Schools

NEW QUESTION # 40

You want to integrate a SOAP adapter into an integration process and enable the adapter to send messages to the integration flow. Which user role must you set up in the SOAP adapter?

- A. MessagingSend
- B. MessagingSendtoCI
- C. ESBMessaging send**

Answer: C

Explanation:

To integrate a SOAP adapter into an integration process and enable the adapter to send messages to the integration flow, you must set up the ESBMessaging send user role in the SOAP adapter. The ESBMessaging send user role grants the permission to send messages to the Enterprise Service Bus (ESB) of the Cloud Integration capability. The ESB is responsible for routing and delivering messages between different integration flows and adapters. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 41

How does the increased number of API calls in a microservices architecture impact API management and monitoring within an SAP Integration Suite landscape?

- A. Increased API calls necessitate less robust API management tools and simplified monitoring capabilities within the SAP Integration Suite.
- B. performance, security and traceability across the distributed microservices.
- C. Reduced API calls simplify API management and minimize monitoring needs within the SAP Integration Suite.
- D. Increased API calls improve API management efficiency and reduce the need for extensive monitoring within the SAP Integration Suite.
- E. **Increased API calls necessitate more robust API management tools and comprehensive monitoring capabilities within the SAP Integration Suite tenure**

Answer: E

Explanation:

In a microservices architecture, applications are decomposed into multiple smaller services communicating via APIs. This results in: Increased API traffic due to inter-service communication.

Higher need for governance: enforcing policies, security, throttling, and quotas.

Comprehensive monitoring required to trace calls across multiple distributed services to ensure performance, reliability, and compliance.

SAP Integration Suite's API Management provides these capabilities:

Traffic management (quotas, rate limiting).

Security policies (OAuth, API keys).

End-to-end monitoring & analytics for distributed calls.

Thus, the correct answer highlights the need for more robust API management and monitoring in high- volume, microservices-driven landscapes.

NEW QUESTION # 42

How do you configure a SOAP adapter for asynchronous processing?

- A. Message Exchange Pattern: Request-Reply Process Settings WS Standard
- B. **Message Exchange Pattern: One-Way Process Settings: WS Standard**
- C. Message Exchange Pattern: One-Way Process Settings: Robust
- D. Message Exchange Pattern: Request-Reply Process Settings Robust

Answer: B

Explanation:

To configure a SOAP adapter for asynchronous processing, you must set the message exchange pattern to one-way and the process settings to WS standard. The message exchange pattern defines how the sender and receiver communicate with each other using SOAP messages. The one-way pattern means that the sender sends a message to the receiver without expecting a response. The process settings define how the SOAP adapter handles errors and acknowledgements during message processing. The WS standard setting means that the SOAP adapter uses WS-ReliableMessaging protocol to ensure reliable delivery of messages and WS-Addressing protocol to identify the endpoints and actions of messages. Reference: Configure the SOAP (SOAP 1.x) Sender Adapter | SAP Help Portal, Configure the SOAP (SOAP 1.x) Receiver Adapter | SAP Help Portal

NEW QUESTION # 43

Which of the following can you use for an XSLT mapping in an integration flow?

- A. JSON
- B. **XML**
- C. HTML
- D. PHP

Answer: B

Explanation:

XSLT (Extensible Stylesheet Language Transformations) is a language designed to transform XML documents into other XML or text formats.

In SAP Cloud Integration, XSLT mapping can only be applied when the payload is in XML format.

For JSON payloads, you would first convert JSON # XML, then apply XSLT mapping.

Other options:

HTML # Not used for XSLT mapping.

JSON # Requires conversion first, cannot be directly used.

PHP # A programming language, unrelated to mappings.
