## Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.</li></ul>

## Confluent Certified Administrator for Apache Kafka Sample Questions (Q46-Q51):

### NEW QUESTION # 46

Which out-of-the-box Kafka Authorizer implementation uses ZooKeeper?

- A. LDAP
- B. Ranger
- C. RBAC
- D. ACLs**

**Answer: D**

Explanation:

Kafka's built-in ACL (Access Control List) authorizer stores and manages permissions using ZooKeeper by default. This implementation controls access at the resource level (topics, consumer groups, etc.).

### NEW QUESTION # 47

What is the correct permission check sequence for Kafka ACLs?

What is the correct permission check sequence for Kafka ACLs?

- A. Super Users -> Deny ACL -> Allow ACL -> Deny
- B. Deny ACL -> Deny -> Allow ACL -> Super Users
- C. Super Users -> Allow ACL -> Deny ACL-> Deny**
- D. Allow ACL -> Deny ACL -> Super Users -> Deny

**Answer: C**

Explanation:

Kafka checks permissions in the following sequence:

1. Super Users: If the user is a super user (defined via super.users), access is granted immediately.
2. Allow ACL: If there is a matching Allow ACL, Kafka proceeds to the next step.
3. Deny ACL: If there is a matching Deny ACL, access is denied (even if an Allow exists).
4. Deny: If no matching ACLs are found, access is denied by default.

This order ensures that super users bypass ACLs, denials override allows, and default is deny.

### NEW QUESTION # 48

Which secure communication is supported between the REST proxy and REST clients?

- A. SCRAM
- B. MD5
- C. **TLS (HTTPS)**
- D. Kerberos

**Answer: C**

### NEW QUESTION # 49

An employee in the reporting department needs assistance because their data feed is slowing down. You start by quickly checking the consumer lag for the clients on the data stream.

Which command will allow you to quickly check for lag on the consumers?

- A. bin/kafka-consumer-lag.sh
- B. **bin/kafka-consumer-groups.sh**
- C. bin/kafka-consumer-group-throughput.sh
- D. bin/kafka-reassign-partitions.sh

**Answer: B**

Explanation:

The kafka-consumer-groups.sh script is used to inspect consumer group details, including consumer lag, which indicates how far behind a consumer is from the latest data in the partition.

The typical usage is bin/kafka-consumer-groups.sh --bootstrap-server <broker> --describe --group <group\_id>

### NEW QUESTION # 50

You are using Confluent Schema Registry to provide a RESTful interface for storing and retrieving schemas.

Which types of schemas are supported? (Choose three.)

- A. **JSON**
- B. **Protobuf**
- C. Thrift
- D. **Avro**
- E. gRPC

**Answer: A,B,D**

Explanation:

Avro is the original and most commonly used schema format supported by Schema Registry.

Confluent Schema Registry supports JSON Schema for validation and compatibility checks.

Protocol Buffers (Protobuf) are supported for schema management in Schema Registry.

### NEW QUESTION # 51

.....

And if you still feel uncertain about the content, wondering whether it is the exact CCAAK exam material that you want, you can free download the demo to check it out.
