Itcertkr의 CompTIA인증 CS0-003덤프를 구매하시면 1년동안 무료 업데이트서비스버전을 받을수 있습니다. 시험문제가 변경되면 업데이트 하도록 최선을 다하기예Itcertkr의 CompTIA인증 CS0-003덤프의 유효기간을 연장시켜드리는 셴입니다.퍼펙트한 구매후는 서비스는Itcertkr의 CompTIA인증 CS0-003덤프를 구매하시면 받을수 있습니다.

CompTIA CS0-003 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Reporting and Communication: This topic focuses on explaining the importance of vulnerability management and incident response reporting and communication.
주제 2	<ul style="list-style-type: none"> Security Operations: It focuses on analyzing indicators of potentially malicious activity, using tools and techniques to determine malicious activity, comparing threat intelligence and threat hunting concepts, and explaining the importance of efficiency and process improvement in security operations.
주제 3	<ul style="list-style-type: none"> Vulnerability Management: This topic discusses involving implementing vulnerability scanning methods, analyzing vulnerability assessment tool output, analyzing data to prioritize vulnerabilities, and recommending controls to mitigate issues. The topic also focuses on vulnerability response, handling, and management.
주제 4	<ul style="list-style-type: none"> Incident Response and Management: It is centered around attack methodology frameworks, performing incident response activities, and explaining preparation and post-incident phases of the life cycle.

CompTIA CS0-003덤프샘플문제, CS0-003최신시험후기

많은 사이트에서CompTIA 인증CS0-003 인증시험대비자료를 제공하고 있습니다. 그중에서 Itcertkr를 선택한 분들은CompTIA 인증CS0-003시험통과의 지름길에 오른것과 같습니다. Itcertkr는 시험에서 불합격성적표를 받으시면 덤프비용을 환불하는 서비스를 제공해드려 아무런 걱정없이 시험에 도전하도록 힘이 되어드립니다. Itcertkr덤프를 사용하여 시험에서 통과하신 분이 전해주시는 희소식이 Itcertkr 덤프품질을 증명해드립니다.

최신 CompTIA Cybersecurity Analyst CS0-003 무료샘플문제 (Q170-Q175):

질문 # 170

Which of the following best describes the document that defines the expectation to network customers that patching will only occur between 2:00 a.m. and 4:00 a.m.?

- A. MOU
- B. KPI
- C. SLA
- D. LOI

정답: C

설명:

Explanation

SLA (Service Level Agreement) is the best term to describe the document that defines the expectation to network customers that patching will only occur between 2:00 a.m. and 4:00 a.m., as it reflects the agreement between a service provider and a customer that specifies the services, quality, availability, and responsibilities that are agreed upon. An SLA is a common type of document that is used in various industries and contexts, such as IT, telecom, cloud computing, or outsourcing. An SLA typically includes metrics and indicators to measure the performance and quality of the service, such as uptime, response time, or resolution time. An SLA also defines the consequences or remedies for any breaches or failures of the service, such as penalties, refunds, or credits. An SLA can help to manage customer expectations, formalize communication, improve productivity, and strengthen relationships. The other terms are not as accurate as SLA, as they describe different types of documents or concepts. LOI (Letter of Intent) is a document that outlines the main terms and conditions of a proposed agreement between two or more parties, before a formal contract is signed. An LOI is usually non-binding and expresses the intention or interest of the parties to enter into a future agreement. An LOI can help to clarify the key points of a deal, facilitate negotiations, or demonstrate commitment. MOU (Memorandum of Understanding) is a document that describes a mutual agreement or cooperation between two or more parties, without creating any legal obligations or commitments. An MOU is usually more formal than an LOI, but less formal than a contract. An MOU can help to establish a common ground, define roles and responsibilities, or outline expectations and goals. KPI (Key Performance Indicator) is a concept that refers to a measurable value that demonstrates how effectively an organization or individual is achieving its key objectives or goals. A KPI is usually quantifiable and specific, such as revenue growth, customer satisfaction, or employee retention. A KPI can help to track progress, evaluate performance, or identify areas for improvement.

질문 # 171

Which of the following best describes the key elements of a successful information security program?

- A. Disaster recovery and business continuity planning, and the definition of access control requirements and human resource policies
- B. Business impact analysis, asset and change management, and security communication plan
- C. Security policy implementation, assignment of roles and responsibilities, and information asset classification
- D. Senior management organizational structure, message distribution standards, and procedures for the operation of security management systems

정답: C

설명:

A successful information security program consists of several key elements that align with the organization's goals and objectives, and address the risks and threats to its information assets.

Security policy implementation: This is the process of developing, documenting, and enforcing the rules and standards that govern the security of the organization's information assets. Security policies define the scope, objectives, roles, and responsibilities of the security program, as well as the acceptable use, access control, incident response, and compliance requirements for the information assets.

질문 # 172

A security analyst needs to mitigate a known, exploited vulnerability related not tack vector that embeds software through the USB interface. Which of the following should the analyst do first?

- A. Conduct security awareness training on the risks of using unknown and unencrypted USBs.
- B. Check configurations to determine whether USB ports are enabled on company assets.
- C. Write a removable media policy that explains that USBs cannot be connected to a company asset.
- D. Review logs to see whether this exploitable vulnerability has already impacted the company.

정답: B

설명:

USB ports are a common attack vector that can be used to deliver malware, steal data, or compromise systems. The first step to mitigate this vulnerability is to check the configurations of the company assets and disable or restrict the USB ports if possible. This will prevent unauthorized devices from being connected and reduce the attack surface. The other options are also important, but they are not the first priority in this scenario.

* Are there any attack vectors for a printer connected through USB in a Windows environment?, answer by user "schroeder"

질문 # 173

A security analyst needs to mitigate a known, exploited vulnerability related to an attack vector that embeds software through the USB interface. Which of the following should the analyst do first?

- A. Conduct security awareness training on the risks of using unknown and unencrypted USBs.
- **B. Check configurations to determine whether USB ports are enabled on company assets.**
- C. Write a removable media policy that explains that USBs cannot be connected to a company asset.
- D. Review logs to see whether this exploitable vulnerability has already impacted the company.

정답: B

질문 # 174

After completing a review of network activity, the threat hunting team discovers a device on the network that sends an outbound email via a mail client to a non-company email address daily at 10:00 p.m. Which of the following is potentially occurring?

- A. Irregular peer-to-peer communication
- B. Abnormal OS process behavior
- **C. Data exfiltration**
- D. Rogue device on the network

정답: C

설명:

Data exfiltration is the theft or unauthorized transfer or movement of data from a device or network. It can occur as part of an automated attack or manually, on-site or through an internet connection, and involve various methods. It can affect personal or corporate data, such as sensitive or confidential information. Data exfiltration can be prevented or detected by using compression, encryption, authentication, authorization, and other controls. The network activity shows that a device on the network is sending an outbound email via a mail client to a non-company email address daily at 10:00 p.m. This could indicate that the device is compromised by malware or an insider threat, and that the email is used to exfiltrate data from the network to an external party. The email could contain attachments, links, or hidden data that contain the stolen information. The timing of the email could be designed to avoid detection by normal network monitoring or security systems.
