Additionally, certified professionals can access exclusive resources and support from Google, which can help them stay up-to-date with the latest features and updates in Google Workspace.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q37-Q42):

NEW QUESTION # 37

Your-company.com recently started using Google Workspace. The CIO is happy with the deployment, but received notifications that some employees have issues with consumer Google accounts (conflict accounts).

You want to put a plan in place to address this concern.

What should you do?

- A. Ask users to request a new Google Workspace account from your local admin.
- B. Use the conflict account remove tool to remove the accounts from Google Workspace.
- C. Rename the accounts to temp@your-company.com, and recreate the accounts.
- D. Use the Transfer tool for unmanaged users to find the conflict accounts.

Answer: D

Explanation:
* Access the Transfer Tool:
* In the Google Workspace Admin console, navigate to "Users" > "Transfer tool for unmanaged users".
* Identify Conflict Accounts:
* Use the tool to search for unmanaged users (conflict accounts) that have email addresses matching your company domain.
* Send Transfer Requests:
* Send transfer requests to the identified unmanaged users, asking them to transfer their accounts to your Google Workspace domain.
* Complete the Transfer:
* Guide the users through the transfer process to ensure their accounts are moved to the managed Google Workspace environment.
* Verify the transfer completion and resolve any remaining conflicts.

NEW QUESTION # 38

You work for an international organization and your CEO frequently travels to other countries You need to enable email access and configure the account for multiple administrative assistants What should you do?

- A. Log into the Gmail account of the CEO Set up and share two separate email aliases
- B. Enable users to specify what sender information is included in delegated messages sent from their account.
- C. Provide the executive administrative assistants with the account password of the CEO
- D. Create a group of administrative assistants Enable delegated access to the mailbox of the CEO for that group

Answer: D

Explanation:
Access Admin Console: Log in to the Google Admin console using your administrator account.
Create a Group: Go to Directory > Groups and create a new group for the administrative assistants.
Add Members: Add the administrative assistants to this group.
Enable Delegated Access: Go to Users > [CEO's account] > Account and click on Email delegation.
Delegate Mailbox Access: Enter the email address of the newly created group. This allows all members of the group to access the CEO's mailbox.
Save Changes: Confirm and save the changes. The administrative assistants will now have delegated access to the CEO's email account, allowing them to manage emails while the CEO is traveling.

NEW QUESTION # 39

Your organization has decided to enforce 2-Step Verification for a subset of users. Some of these users are now locked out of their accounts because they did not set up 2-Step Verification by the enforcement date. What corrective action should you take to allow the users to sign in again?

- A. Move the affected users into the exception group temporarily so they can set up 2-Step Verification, and then remove them from the exception group after successful sign-in is confirmed.
- B. Move the affected users into the exception group permanently so they do not have to use 2-Step Verification going

forward.
- C. Disable 2-Step Verification per organizational unit so the affected users can sign in.
- D. Disable 2-Step Verification organization-wide so all users can successfully sign in.

Answer: A

NEW QUESTION # 40
Your company is transitioning to Google Workspace from legacy communication and collaboration applications. User accounts are managed in Active Directory and synced to Google Workspace by using Google Cloud Directory Sync (GCDS). Your company is implementing a new security policy for all accounts that requires complex passwords. Passwords must be at least 20 characters long, contain 3 symbols, 4 numbers, and 2 capital letters.
You need to enforce the new password policy in Google Workspace. What should you do?

- A. Enable strong password enforcement and require a minimum length of 20 characters at the top-level organizational unit.
- B. Create a password policy in Active Directory. Install Password Sync on the global catalog servers for Active Directory and require a password change for your users.
- C. Create a password policy in Active Directory. Enable password synchronization in GCDS.
- D. Share the instructions for changing a Google account password with your users. Monitor password strength in the Google Admin console as users change their passwords.

Answer: C

Explanation:
Since user accounts are managed in Active Directory (AD) and synced to Google Workspace via Google Cloud Directory Sync (GCDS), the best approach to enforce the new password policy is to create the password policy within Active Directory and then enable password synchronization in GCDS. This ensures that the complex password requirements are enforced within AD, and when passwords are updated, they will be synchronized with Google Workspace, maintaining consistency across both systems.

NEW QUESTION # 41
Your company recently acquired an organization that was not leveraging Google Workspace. Your company is currently using Google Cloud Directory Sync (GCDS) to sync from an LDAP directory into Google Workspace. You want to deploy a second instance of GCDS and apply the same strategy with the newly acquired organization, which also has its users in an LDAP directory. How should you change your GCDS instance to ensure that the setup is successful? (Choose two.)

- A. Upgrade to the multiple LDAP version of GCDS.
- B. Provide your current GCDS instance with admin credentials to the recently acquired organization's LDAP directory.
- C. Add an LDAP sync rule to your current GCDS instance in order to synchronize new users.
- D. Set up an additional instance of GCDS running on another server, and handle the acquired organization's synchronization.
- E. Set up exclusion rules to ensure that users synced from the acquired organization's LDAP are not, suspended.

Answer: A,D

Explanation:
* Additional GCDS Instance:
* Running a separate instance of GCDS on another server allows you to manage synchronization for the acquired organization independently.
* This avoids conflicts and simplifies management for different LDAP directories.
* Multiple LDAP Version:
* Upgrading to the multiple LDAP version of GCDS supports synchronizing data from multiple LDAP directories.
* This is useful for handling different organizations with distinct LDAP setups.
* Steps for Setting Up:
* Install a second instance of GCDS on a separate server.
* Configure the new instance with the acquired organization's LDAP details.
* If using the multiple LDAP version, upgrade your existing GCDS setup and configure rules for both LDAP directories.
* Test the synchronization to ensure proper setup and no conflicts.
