Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q137-Q142):

NEW QUESTION # 137
Acceptance criteria provide the details of the Story from a testing point of view

- A. FALSE
- B. TRUE

Answer: B

NEW QUESTION # 138
What is the next step in the SAFe Implementation Roadmap after organizing around value?

- A. Train teams and launch ARTs
- B. Create the implementation plan
- C. Enhance the Portfolio
- D. Prepare for ART launch

Answer: D

Explanation:
= The SAFe Implementation Roadmap is a series of 12 critical moves that guide enterprises in implementing SAFe successfully. The roadmap is based on the experience and best practices of hundreds of SAFe transformations. The roadmap is not a one-size-fits-all approach, but rather a suggested sequence of steps that can be adapted to the specific context and needs of each organization. The sixth step in the roadmap is Organize Around Value, which involves identifying the value streams and Agile Release Trains (ARTs) that deliver value to the customers. The next step after that is Prepare for ART Launch, which involves planning and preparing for the first Program Increment (PI) planning event, where the ART members align on a common vision, mission, and backlog, and commit to a set of PI objectives. This step is crucial for establishing the cadence, synchronization, and collaboration of the ART, and setting the stage for delivering value in an Agile way. NEW QUESTION # 139
Which of the following aspects of the continuous delivery pipeline focuses on getting to production early for verification?

- A. Release on Demand
- B. Continuous Integration
- C. Continuous Deployment
- D. Continuous Exploration

Answer: C

Explanation:
Continuous Deployment is the aspect of the continuous delivery pipeline that focuses on getting to production early for verification. It is the process of automatically releasing every change that passes the Continuous Integration tests to a staging or production environment. This enables faster feedback and validation from the end users and stakeholders, as well as reducing the risks and costs associated with manual deployments. NEW QUESTION # 140
During the PI Planning event, when are planning adjustments agreed upon?

- A. During the management review and problem-solving meeting
- B. During the draft plan review
- C. During breakout sessions
- D. During the Coach sync

Answer: A

Explanation:
During the PI Planning event, planning adjustments are agreed upon during the management review and problem-solving meeting, which is the last activity of the first day of the event1. In this meeting, the management team reviews the draft plans of the teams, identifies and resolves any issues, risks, or dependencies, and makes any necessary changes to the scope, people, or resources1. The management team also communicates the planning adjustments back to the Agile Release Train (ART) the next day, before the teams continue their planning and make the appropriate adjustments2. NEW QUESTION # 141
What information does a cumulative flow diagram provide?

- A. The derived predictability data for the team
- B. The self-assessment information for the teams
- C. The cycle time system information which starts the implementation
- D. The data for the team to identify current bottlenecks

Answer: D

Explanation:
According to the SAFe for Teams SP (6.0) - SAFe Practitioner handbook and study guide, a cumulative flow diagram (CFD) is a visual tool that shows the amount of work in each stage of a process over time. It helps teams monitor the flow of work, identify bottlenecks, and improve efficiency. A CFD provides the following information:
* The total number of work items in the system (the height of the diagram)
* The number of work items in each stage of the process (the width of each band)
* The lead time for each work item (the horizontal distance from the left to the right edge of the diagram)
* The cycle time for each work item (the horizontal distance from one stage to another within the diagram)
* The throughput of the system (the slope of the diagram)
* The stability of the system (the smoothness of the diagram) By analyzing the CFD, teams can identify current bottlenecks, such as:
* A large amount of work in progress (WIP), which indicates a high lead time and low throughput
* A wide band in a specific stage, which indicates a long cycle time and a potential impediment
* A steep or jagged slope, which indicates a high variability and unpredictability References: Exam Study Guide: SP (6.0) - SAFe Practitioner, SAFe for Teams - Know Your Role on an Agile Team, Cumulative Flow Diagram SAFe: Complete Guide
