If the candidate complete **IAPP CIPM practice test** with certification **IAPP CIPM exam dumps** along with self-assessment to get the proper idea on IAPP accreditation and to ace the certification exam.

IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q40-Q45):

NEW QUESTION # 40

(As the data protection officer for the growing company. Vision 4634. what would be the most cost-effective way to monitor changes in laws and regulations?)

- **A. Subscribe to mailing lists that report on regulatory changes.**
- B. Regularly engage regulators.
- C. Hire a well-known external law firm.
- D. Attend workshops and interact with other professionals.

Answer: A

Explanation:

For cost-effective horizon scanning, curated mailing lists/alerts (from regulators, reputable privacy organizations, and industry groups) provide continuous updates at low cost. Engaging regulators and retaining external counsel can be high-effort/high-cost, while workshops are useful but periodic and less comprehensive than automated alerts.

NEW QUESTION # 41

Which of the following helps build trust with customers and stakeholders?

- A. Only publish what is legally necessary to reduce your liability.
- **B. Provide a dedicated privacy space with the privacy policy, explanatory documents and operation frameworks.**
- C. Enable customers to view and change their own personal information within a dedicated portal.
- D. Publish your privacy policy using broad language to ensure all of your organization's activities are captured.

Answer: B

Explanation:

Providing a dedicated privacy space with the privacy policy, explanatory documents and operation frameworks helps build trust with customers and stakeholders. A dedicated privacy space is a section on an organization's website or app that provides clear and transparent information about how the organization processes personal information and respects data subject rights. It can include documents such as: a privacy policy that explains what personal information is collected, why it is collected, how it is used, who it is shared with, and how it is protected; explanatory documents that provide more details or examples of specific processing activities or scenarios; and operation frameworks that describe the procedures and mechanisms for data subject requests, complaints, inquiries, or feedback. A dedicated privacy space can help customers and stakeholders understand the organization's privacy practices, choices, and values, and enhance their confidence and trust.

NEW QUESTION # 42

Under the General Data Protection Regulation (GDPR), which situation would be LEAST likely to require a Data Protection Impact

Assessment (DPIA)?

- A. The use of a camera system to monitor driving behavior on highways
- **B. An online magazine using a mailing list to send a generic daily digest to marketing emails**
- C. A health clinic processing its patients' genetic and health data
- D. A Human Resources department using a tool to monitor its employees' internet activity

Answer: B

NEW QUESTION # 43

SCENARIO

Please use the following to answer the next QUESTION:

Richard McAdams recently graduated law school and decided to return to the small town of Lexington, Virginia to help run his aging grandfather's law practice. The elder McAdams desired a limited, lighter role in the practice, with the hope that his grandson would eventually take over when he fully retires. In addition to hiring Richard, Mr. McAdams employs two paralegals, an administrative assistant, and a part-time IT specialist who handles all of their basic networking needs. He plans to hire more employees once Richard gets settled and assesses the office's strategies for growth.

Immediately upon arrival, Richard was amazed at the amount of work that needed to be done in order to modernize the office, mostly in regard to the handling of clients' personal data. His first goal is to digitize all the records kept in file cabinets, as many of the documents contain personally identifiable financial and medical data. Also, Richard has noticed the massive amount of copying by the administrative assistant throughout the day, a practice that not only adds daily to the number of files in the file cabinets, but may create security issues unless a formal policy is firmly in place. Richard is also concerned with the overuse of the communal copier/printer located in plain view of clients who frequent the building. Yet another area of concern is the use of the same fax machine by all of the employees. Richard hopes to reduce its use dramatically in order to ensure that personal data receives the utmost security and protection, and eventually move toward a strict Internet faxing policy by the year's end.

Richard expressed his concerns to his grandfather, who agreed, that updating data storage, data security, and an overall approach to increasing the protection of personal data in all facets is necessary. Mr. McAdams granted him the freedom and authority to do so.

Now Richard is not only beginning a career as an attorney, but also functioning as the privacy officer of the small firm. Richard plans to meet with the IT employee the following day, to get insight into how the office computer system is currently set-up and managed. As Richard begins to research more about Data Lifecycle Management (DLM), he discovers that the law office can lower the risk of a data breach by doing what?

- **A. Reducing the volume and the type of data that is stored in its system**
- B. Increasing the number of experienced staff to code and categorize the incoming data.
- C. Prioritizing the data by order of importance.
- D. Minimizing the time it takes to retrieve the sensitive data.

Answer: A

Explanation:

As Richard begins to research more about Data Lifecycle Management (DLM), he discovers that the law office can lower the risk of a data breach by reducing the volume and the type of data that is stored in its system. This is because storing less data means having less data to protect and less data to lose in case of a breach. By reducing the volume and the type of data that is stored in its system, the law office can also comply with the data minimization principle under the GDPR and other data protection regulations, which requires that personal data should be adequate, relevant and limited to what is necessary for the purposes for which they are processed³. Therefore, this option is a way to lower the risk of a data breach.

The other options are not ways to lower the risk of a data breach by applying DLM principles. Prioritizing the data by order of importance may help to allocate resources and optimize performance, but it does not necessarily reduce the risk of a data breach. Minimizing the time it takes to retrieve the sensitive data may improve efficiency and responsiveness, but it does not necessarily reduce the risk of a data breach. Increasing the number of experienced staff to code and categorize the incoming data may enhance data quality and accuracy, but it does not necessarily reduce the risk of a data breach.
